Name of insurer	Aviva Life & Pensions UK Limited
Global business	

Financial year ended **31st December 2014**

Code

0201 Section 148 Waivers

Rate of interest 1706019

The PRA, on the application of the firm, made a direction under section 138A of the Financial Services and Markets Act 2000 in December 2013. The effect of the direction is to modify the provisions of INSPRU 3.1.35R and IPRU(INS) Appendix 9.3 so that a more appropriate rate of interest will be used for assets taken in combination.

0203 Quota Share Reinsurance

On 31 December 2013, the company entered into a Quota Share reinsurance arrangement with its fully owned insurance subsidiary undertaking Aviva Annuity UK Limited (UKA). Under the terms of the Quota Share Reinsurance 12.5% of the Long Term Fund of UKA was reinsured to the company. On the 1 January 2014, the percentage of the quota share was increased from 12.5% to 22.5%.

As a result of the additional 10% Quota Share arrangement, the Company received a further reinsurance premium from UKA of £3,130 million, with the full amount of this being immediately deposited back with UKA as collateral and included as an asset in Form 13 at line 57.

During the year, a proportionate share of new business premiums, claims, investment returns and expenses of UKA have been ceded to the company. The same position will apply going forwards.

Included within this reinsurance are index linked liabilities of £1,220.1m which have been included in mathematical reserves of the company and accordingly within index linked liabilities on Form 54. As the assets backing the reinsurance are effectively covered by the deposit with UKA, no index linked assets have been shown for this reinsurance on Form 13 Line 58 and accordingly no Form 56 is presented..

0301 Reconciliation of net admissible assets to total capital resources after deductions

		2014 £'000	2013 £'000
i)	Net admissible assets		
	Form 13 Line 89 (Long term business)	97,113,615	92,664,339
	Form 13 Line 89 (Other than long term business)	1,734,920	1,609,216
	Form 14 Lines 11, 12 and 49	(89,830,265)	(85,731,110)
	Form 15 Line 69	(376,978)	(49,793)
		8,641,292	8,492,652
iv)	Capital resources requirement of regulated related undertakings	1,565,404	1,167,404
	Form 3, Line 79	10,206,696	9,660,056

0306 Financial Reinsurance – ceded

The impact of the financial reinsurance arrangements included in line 92 is to reduce mathematical reserves by £301.1m.

The contingent liability repayable to the reinsurers under the arrangements totals £472.7m.

The commutation value for those arrangements where it is possible to derive an amount repayable totalled £472.7m at the end of the financial year.

Code

1301 Aggregate value of assets

1308

The aggregate values of types of assets specified in instruction 5 to Form 13 are:-

- (i) Unlisted investments on lines 41 and 46 are £180.7m (Long term business) and £nil (Other than long term business).
- (ii) Listed investments on lines 41, 46 and 48, which are not readily realisable £nil.
- (iii) Units in collective investment schemes that are not schemes falling within the UCITS Directive or are not authorised unit trust schemes or recognised schemes within the meaning of Part XVII of the Act are £2,895.1m (all Long term business).
- (iv) Reversionary interests or remainders in property other than land or buildings £nil.

1302 Aggregate value of hybrid securities – long term insurance business 1309

The company held hybrid securities of £208.2m.

1304 Statement of amounts set off

Amounts have been set off to the extent permitted by generally accepted accounting principles.

1305 Counterparty limits during the year

1319

1310

The maximum permitted exposure to counterparties is set out in the Investment Management Agreement with Aviva Investors Global Services Limited and approved by Aviva Life Investment Committee, as follows:

Deposits

The total UK Life Group credit risk exposure to any single institution limit for a particular counterparty holding at the end of the financial year was £400m for Tier 1, £300m for Tier 2 and £150m for Tier 3.

Each product cannot hold more than 2% of funds under management (but subject to minimum of £20m and a maximum of £150m) with individual 'Tier 1' counterparties, 1.5% of funds under management (but subject to a minimum of £15m and a maximum of £100m) with individual 'Tier 2' counterparties and 0.5% of funds under management (but subject to a minimum of £10m and a maximum of £75m) with individual 'Tier 3' counterparties. Tier 1 represents AAA rated institutions, Tier 2 represents institutions rated AA- or better whilst Tier 3 represents institutions rated A- or better.

Equities

The maximum of a company's equity held by any fund is limited to 19.99% within the UK and and10% overseas. Unquoted holdings do not exceed 10% of any fund.

Fixed

Exposure to non-government bonds is limited to holdings which are deemed to be of a suitable quality determined by financial management. The maximum holding across all funds of a single issue is limited to 25% of the issue. Private placements are limited to 5% of the non-government bond portfolio.

Derivatives

Exposure to derivatives is considered in the management of the funds within the overall risk limits. Where appropriate, constraints are in place over the nature of derivative instruments and the duration..

1306 Counterparty exposure at the year end

1312

Exposure to any one counterparty at the end of the financial year did not exceed 5% of the sum of the insurer's base capital resources requirement and its long-term insurance liabilities, excluding property linked liabilities and net of reinsurance ceded.

1401 Provision for reasonably foreseeable adverse variations

1501

The methods and assumptions disclosed in the valuation report, under IPRU (INS) Appendix 9.4, appropriately allow for the determination of any provision for reasonably foreseeable adverse variations. It has been determined that no provision for reasonably foreseeable adverse variations is required.

Senior management performed a review of asset positions that are valued at marked to market and marked to model to determine whether valuation adjustments should be made pursuant to GENPRU 1.3.30R to GENPRU 1.3.33R. The review concluded that no such adjustments were required.

1402 Contingent liabilities, etc 1502

The Company has provided guarantees to UKA totalling £250m and £130m to support two proposed infrastructure investments by Aviva Annuity UK Limited. If called upon, the guarantees would be met from, and the purchased infrastructure assets recognised in, the Non-profit funds of the Company. The guarantees are subject to the approval by the Board of Aviva plc. No liability has been recognised in respect of the guarantees.

There are no charges over any assets of the Company.

There are no deferred tax liabilities on capital gains included on the form.

There are no contingent liabilities not included on the Form.

The Company has indemnified the overdrafts of certain other group companies.

Other than noted above there are no guarantees, indemnities, or other contractual commitments, effected other than in the ordinary course of insurance business, in respect of the existing or future liabilities of related companies.

There are no other fundamental uncertainties.

1601 Basis of conversion of foreign currency

4005

Assets and liabilities in currencies other than sterling have been translated into sterling at rates of exchange ruling at 31 December 2014. Revenue transactions of those operations, which are traded in currencies other than sterling, are translated at average rates of exchange for the financial year.

1700 Form omitted

No Category 1, Category 13 or Category 18 Form 17 has been prepared on the basis that there are no derivative contracts for these categories of assets.

1701 Variation Margin

The aggregate amount of variation margin received by the company totalled £1,791.9m. This includes £675.0m of non-cash collateral which has not been included on forms 13, 14 and 17 in line with local GAAP. Of the aggregate amount received, \pounds 1,116.1m has been allocated to Form 13 Line 44.

No amounts on form 13 reflect the liability to repay any excess.

Financial year ended	31st December 2014

Code

1800 Forms omitted 1900

Forms 18 and 19 have not been included for WPSF5 and Stakeholder. Reasons for this are as follows:

WPSF5 does not fit the FSA definition of a With-Profits fund – policyholders are not eligible to participate in any established surplus from Aviva. Whilst there is With-Profits business within the fund the policyholders are only eligible to participate in surplus from the counterparty to the reinsurance. In the event of reinsurer default there is not a defined link with Aviva's surplus.

Stakeholder does not form a fund in itself – it is written into New and Old With profit sub fund (88.25% and 11.75% respectively) and participates in the same assets. Whilst it has a separate smoothing account and is "ring-fenced" to some extent the rest of the fund has no recourse to stakeholder profits. Therefore, this does not fit the FSA definition of a separate "With-profits fund" as it does not have a separate pool of surplus.

1901 Support arrangement assets

Movements in the RIEESA

The amount included in line 27 (and within lines 29, 67, 68 and 69) comprises the support arrangement assets as defined by the firm's reorganisation scheme dated 1 October 2009. The assets described below are included within Form 13 line 89 of Non Profit Sub Fund 1 (NPSF1).

Shown below are the movements in the Reattributed Inherited Estate External Support Account (RIEESA) during the year, plus the reconciliation of the RIEESA to the figure shown in line 27 of Form 19

From 1 April 2014, all policyholder business was transferred to NWPSF and reported within that fund. The impact of this is shown below. The LTICR is relation to this business was also transferred.

£'000

Balance brought forward at 1 January 2014	1,044,314
Investment income and gains	21,813
Premiums less claims and expenses on non-profit business in which the RIEESA has invested, (less increase/plus decrease) in liabilities on that business.	81,569
Repayment of capital support arrangement from New With Profits Sub Fund	1,058,904
Transfer out of PH business to NWPSF	(23,498)
Taxation attributable to the RIEESA	(10,139)
Balance carried forward at 31 December 2014	2,172,963
Support arrangement assets	£'000
RIEESA	2,172,963
Capital requirements of business to be retained by the RIEESA	-
Support arrangement assets	2,172,963

4002 Other income and expenditure

Lines 15 and 25 have been used for transfers of annual management charges between sub funds. These amounts have been shown net in the summary form.

Financial year ended 31st December 2014

Code

4006 Apportionment of items between different long-term insurance business funds

Investment Income

Where linked assets are not individually designated to a particular fund the assets and investment income are allocated by reference to the unit holdings of the respective funds. For all other invested assets investment income is allocated by reference to the designated asset.

Increase or decrease in the value of assets brought into account

The value of non-linked assets brought into account is determined by reference to the liabilities of the relevant fund. The assets available are individually designated to the relevant fund.

In respect of linked assets, where the assets are not individually designated to a particular fund the value brought into account is allocated by reference to the unit holdings of the respective funds.

Expenses

Expenses incurred in respect of a specific fund of business are attributed to the relevant fund. Expenses not so incurred are allocated to the relevant funds on an incurred basis in accordance with the arrangement for the provision of management services by Aviva Life Services UK Limited.

Taxation

The taxation of each fund is computed in accordance with the taxation regulations applicable to that class of business.

4008 Provision of management services

Under a management agreement Aviva Life Services UK Limited supplies and makes a charge for the provision of management services to the Company.

Investment management services have been provided to the Company by Aviva Investors Global Services Ltd.

4009 Material connected party transactions

There were no related party transactions during the year which exceeded 5% of the long-term insurance liabilities net of reinsurance ceded.

4300 Form omitted

Form 43 in respect of the Stakeholder Fund has been omitted as all entries (including comparatives) would be blank.

4401 Basis of valuation in internal linked funds

Investments are stated at current value, listed investments are stated at Bid market value.

4402 Aggregate value of rights under derivative contracts

The aggregate values of rights and liabilities under derivative contracts (gross of variation margin) as at 31 December 2014 are £66.9m and £0.5m respectively. There is no variation margin payable.

5803 Distribution of Surplus

The table below shows the breakdown of the change in the percentage of distributed surplus allocated to policyholders as shown in Form 58. This demonstrates that the change in percentage from 31/12/13 to 31/12/14 is due to changes in the relative proportion of business between different categories of WP policyholder, and the change in pace of refunding past subsidies in respect of new business. The proportion of surplus distributed to each category of policyholders remains unchanged.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – With Profits Sub-FundGlobal businessFinancial year ended31 December 2014

1. Introduction

- (1) The valuation date is 31 December 2014.
- (2) The previous valuation was completed with an effective date of 31 December 2013.
- (3) An interim valuation was carried out with an effective date of 30 June 2014 for the purposes of rule 9.3A.

2. Product Range

There have not been any significant changes to products during the financial year. The fund is open to new withprofit business.

3. Discretionary charges and benefits

(1) The table below shows the period during which a market value reduction (MVR) applied during 2014. The table is separated by class of business and by year of unit purchase. Only entry years where MVRs applied are shown. For all other entry years, no MVR applied.

Product	UWP Life products (not Bond 2000) Without Guarantee	UWP Life products (not Bond 2000) With Guarantee	UWP Life (Bond 2000)	UWP Pensions Products with guaranteed bonus	UWP Pensions Products without guaranteed bonus	UWP Group Defined Benefits
1998	N/A	N/A	N/A	01.01.14 -31.12.14	N/A	01.01.14 - 31.12.14

- (2) There have been no changes to premiums on reviewable protection policies.
- (3) The fund does not have any non-profit deposit administration benefits.

(4) Service charges:

For Unitised Ordinary Business and Post 1/1/95 Unitised Pensions, including 98 Series products Plan fees were reviewed with effect from 1st January 2014 and were based on the change in a RPI index.

Pre 1/1/95 unitised pension products were reviewed with effect from 1st April 2014.

Personal Pension Plans (including AVCs, Jersey Investment Plan) changes were based on the change in a RPI index in January.

Group Money Purchase plans changes were based on the change in an AWEI in April.

- (5) There have been no changes to benefit charges on linked policies.
- (6) There have been no changes to unit management charges or notional charges to accumulating with profits policies.
- (7) There are no internal linked funds in the With-Profit sub-fund of Aviva Life & Pensions UK Ltd (the Company).
- (8) There are no internal linked funds in the With-Profit sub-fund of the Company.
- (9) There are no internal linked funds in the With-Profit sub-fund of the Company.
- (10) There are no internal linked funds in the With-Profit sub-fund of the Company.

4. Valuation basis (other than for special reserves)

(1) Valuation methodology

For the Company, 1% of gross mathematical reserves exceed £10m. A limit of £10m will be applied to all subfunds of the Company when considering whether a group of products is material.

All regular and single premium business is now valued on a Gross Premium basis.

Valuation report – IPRU (INS) Appendix 9.4 Name of insurer Aviva Life & Pensions UK Ltd – With Profits Sub-Fund Global business Financial year ended 31 December 2014

For pensions business continued beyond the normal pension age, the cash value available at the normal pension age has been accumulated with interest.

Unitised with-profits business is valued initially by determining the lower of the current non-guaranteed surrender value and the bid value of units. This result is then compared with a prospective valuation and the higher result taken.

The prospective valuation projects future benefits to the next guarantee date. For Pensions business (and Life business with a set maturity date) this is the maturity date that the policyholder has selected. For Life business without a set maturity date it is the next date that the policyholder has a guaranteed surrender value (see section 5(2)).

The projection assumes future premiums cease and future bonuses are zero, except for policies with a guaranteed minimum bonus rate, where this guaranteed bonus is allowed for. Allowance is made for mortality, with assumptions as shown in the Non-Profit Sub-fund Appendix 9.4. Allowance is made for lapses, with assumptions as shown in 4(9) below. The prospective valuation also explicitly allows for the transfer of the annual management charges from the With Profits Fund to the Non Profit Fund to meet future maintenance expenses.

Any death or critical illness risk is valued on an unexpired premium reserve basis with an allowance for incurred but not reported claims.

(2) Valuation interest rates:

A table of all valuation interest rates used is given below.

Product Group	Interest Rate 31 Dec 2014	Interest Rate 31 Dec 2013	
Life Assurances			
Conventional business WP	2.15%	2.60%	
UWP business	1.65%	2.10%	
Pensions and General Annuities			
Deferred Annuity With Profit			
In payment	2.45%	3.00%	
In deferment – Single Premium	2.45%	3.00%	
In deferment – Regular Premium	2.45%	3.00%	
Deferred Annuity Non Profit			
In Payment	1.85%	2.60%	
In deferment – Single Premium	1.85%	2.60%	
In deferment – Regular Premium	1.85%	2.60%	
Non-profit policies	1.85%	2.60%	
Regular Premium With Profit policies	2.45%	3.00%	
Single Premium With Profit policies	2.45%	3.00%	
Group Defined Benefits	2.45%	3.00%	
UWP business	1.90%	2.45%	
With Profit Annuity	3.10%	3.50%	

(3) Risk adjusted yield

Equity assets

The allowance for credit risk on equities is two-fold. Firstly, a deduction is applied, which is determined as 25% of the excess of the equity yield over the Long Term Gilt Yield. The equity yield is then capped at a maximum of 10%.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer

Global business

Financial year ended

Aviva Life & Pensions UK Ltd – With Profits Sub-Fund

31 December 2014

For the purposes of the valuation the average deduction from the yield on equities held at 31 December 2014 was:

Deduction from Yield	WPSF
Impact of 25% Spread	0.34%
Impact of 10% Cap	0.12%
Total Deduction	0.46%

Property assets

The property assets have been ordered by yield and divided into different categories. Firstly, a deduction is applied to the grouped yields, which is determined as 25% of the excess of the yield over the Long Term Gilt Yield. The property yield in each category is then capped at a maximum of 10%. This means that very low-yielding assets retain the low rate but high-yielding assets are capped.

The reduction on the average yield on property assets is as follows:

Deduction from Yield	WPSF
Impact of 25% Spread	0.88%
Impact of 10% Cap	0.25%
Total Deduction	1.13%

Fixed interest securities

The allowance for credit risk on bonds is two-fold. For 31 December 2014 a deduction equivalent to 51% of the spread over gilts where the spread has been calculated after capping the bond yield at a maximum of 200% of the yield on a representative iBoxx index.

For the purposes of the valuation the average deduction from the yield on fixed interest securities (excluding Approved fixed interest i.e. gilts and other bonds issued by approved UK and international public sector bodies) held at 31 December 2014 was:

Deduction from Yield	WPSF
Impact of Cap	0.29%
Impact of 51% Spread	0.83%
Total Deduction	1.12%

For Mortgages, a deduction of 0.33% was used, while for Deposits, the equivalent deduction was 0.10%.

(4) Mortality assumptions

The table below shows the mortality basis for Conventional business written by the fund.

Product	Mortality basis 31 December 2014	Mortality basis 31 December 2013
UKL&P WP Life Assurances		
Whole Life	104.9% AM00/AF00 sel	104.9% AM00/AF00 sel
Endowments	87.4% AM00/AF00 sel	93.3% AM00/AF00 sel

With Profit Annuity	99.5% PCMA00 / 94.5% PCFA00	100% PCMA00 / 95.5% PCFA00

Unitised with-profit business

Mortality assumptions are shown in the Non-Profit Sub-fund Appendix 9.4.

Notes on tables:

- M tables apply to male lives, F tables to female lives.
- Smoker / Non-Smoker table used where smoker status data is available, otherwise Combined table used
- <u>Annuitant mortality</u>: allowance has been made for future improvements to mortality. The base tables (% of PCXA00) are assumed to apply as at 31 December 2000 from that date improvements are expected. The allowance for improvements is as follows:

	31 December 2014	31 December 2013
Males	CMI_2013_M [1.75%], applicable from 2001 to 2013 CMI_2013_M[1.75%] plus 0.5% p.a., applicable from 2014	CMI_2012_M [1.75%], applicable from 2001 to 2012 CMI_2012_M[1.75%] plus 0.5% p.a., applicable from 2013
Females	CMI_2013_F [1.5%], applicable from 2001 to 2013 CMI_2013_F[1.5%] plus 0.5% p.a., applicable from 2014	CMI_2012_F [1.5%], applicable from 2001 to 2012 CMI_2012_F[1.5%] plus 0.5% p.a., applicable from 2013

There are no products where the assurance mortality basis is expressed as 'modified table'.

Expectation of Life

The table below shows the required examples for expectation of life using the base mortality tables, percentage adjustments and improvement factors quoted above.

Table Description	Expectation of Life for annuitant aged 65 on 1/1/2015	Expectation of Life for annuitant aged 75 on 1/1/2015	Expectation of Life from age 65 for annuitant aged 45 on 1/1/2015	Expectation of Life from age 65 for annuitant aged 55 on 1/1/2015
99.5% of PCMA00 plus CMI_2013_M[1.75%] applied from 2001, plus 0.5% p.a. from 2014	24.9	15.2	28.8	26.8
94.5% of PCFA00 plus CMI_2013_F[1.5%] applied from 2001, plus 0.5% p.a. from 2014	27.1	17.1	30.4	28.8

Allowance for future changes in mortality where not implicit in the basis:

There are no explicit reserves for alterations to mortality. All future changes are made to the tables used to calculate base mathematical reserves.

The remaining margins in the published mortality and morbidity bases are considered sufficient to provide for adverse deviations in experience arising from other causes. No additional reserves are therefore held.

(5) **Morbidity assumptions:**

There are no liabilities within the With Profits Sub-Fund that require morbidity assumptions.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Ltd – With Profits Sub-Fund
Global business	
Financial year ended	31 December 2014

(6) **Expense assumptions:**

Expense assumptions are taken as 120% of the amounts detailed in the Management Services Agreement (MSA). The loadings are used to set a long-term assumption for additional costs arising within the business (e.g. project costs, regulatory fees, audit fees) and to give a margin for adverse deviation.

Non-unit reserves on UWP business are held in the Non-Profit Subfunds, expense assumptions for this business are shown in the Non-Profit Sub-fund Appendix 9.4.

Expense levels are assumed the same for premium-paying and paid-up policies.

The table below shows the per-policy expenses for 2013 and 2014 (including loadings).

Product	Product code	Renewal admin (£ per policy)		
		2014	2013	
CWP savings endowment	120	38.44	37.43	
CWP target cash endowment	125	38.44	37.43	
CWP Pensions	155/165	51.24	49.90	
Annuity (reversionary)	400	0	0	

Assumed future expense inflation

2.99% per annum (RPI as set out by the MSA agreement)

Zillmer adjustments

No Zillmer adjustments were made to net premium reserves (as the valuation was done on a gross premium basis).

Investment expenses

The yield on the asset classes backing the liabilities was reduced for investment expenses. This reduced the upper bound on the interest rates used in the valuation. The adjustment made was 0.165%.

The adjustment reflects the charging structure agreed with the Company's fund managers, Aviva Investors UK.

Tax Relief

Tax relief on expenses on BLAGAB business has been assumed using a rate of 20.00%.

No allowance has been made for tax relief in respect of GRB (Gross Roll Up) business.

(7) There are no internal linked funds in the With-Profit sub-fund of the Company.

(8) **Bonus Assumptions:**

Conventional with-profit business

The Company is a realistic basis life firm. Accordingly, no allowance has been made for future annual or final bonus on Conventional with-profit business. This is consistent with INSPRU1.2.31G. There are no guarantees relating to future annual or final bonus on this business.

Unitised with-profit business

Certain classes of business have guaranteed annual bonus rates. These have been used in the projection of liabilities. No allowance has been made for discretionary annual or final bonus.

Guaranteed regular bonus by product:

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer

Global business

Financial year ended

Aviva Life & Pensions UK Ltd – With Profits Sub-Fund

Product	Guaranteed Annual Bonus Rate	Valuation assumption	Applies to
Unitised With Profits Life	2.50%	2.50%	Units purchased pre 1/1/1999 on policies written before 1/1/1995
Unitised With Profits Pensions	4.00%	4.00%	Units purchased pre 1/1/1999 on policies written before 1/1/1995

In practice there are a small number of cases that do not satisfy the conditions given in the fourth column of

the table but do receive the guaranteed bonus rates shown. These units are identified and the guaranteed bonus rate is incorporated into the valuation.

(9) **Persistency assumptions:**

For Conventional Business, we have assumed 100% persistency until maturity.

31 December 2014

For UWP business, we have allowed for surrender rates consistent with the table below. Furthermore, for UWP policies with a no-MVR/money-back guarantee option available, we have assumed an exit rate of 100% at the next guarantee date. The exception to this is the Norwich Capital Plan, where a guaranteed minimum annual bonus rate of 2.5% may mean that a 0% no-MVR take-up will produce a bigger reserve. Accordingly, the reserves for this product are based on the most onerous of the 100% and 0% no-MVR take-up.

We have also assumed that policyholders that are able to take regular withdrawals without incurring an MVR take 5% of their units in this way (per annum).

Product		Average lapse/surrender/PUP rate for the policy years			
		1-5	6-10	11-15	16-20

Group Pension UWP single premium	Surrender	2.28%	2.28%	2.28%	2.28%

(10) Other basis items:

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – With Profits Sub-FundGlobal businessFinancial year ended31 December 2014

Option take-up rates

• Guaranteed Annuity Rate Options:

We have assumed that current option take-up is 93%. These include a margin over current experience of 10%.

These rates are assumed to increase by 1% per annum to 95%.

• Guaranteed Minimum Pensions (GMP) on Section 32 policies:

We have assumed 100% 'option take-up' of the minimum pension. In practice, policyholders do not have an option (if the maximum pension bought by their policy is below the Guaranteed Minimum then they will be paid the GMP).

Taxation

Valuation interest rates on Life business include an allowance for taxation. This allowance has been arrived at using the following assumption:

- A tax rate of 20% has been assumed in respect of income on Fixed Interest and Property assets (for BLAGAB business). No allowance has been made for taxation on equity income.
- (11) We allow for Equity and Fixed Interest Futures in the matching assets used to hypothecate against reserves.
- (12) During the reporting period, the fund has made no changes to valuation methodology in respect of the following changes in INSPRU valuation rules:
 - (a) Allowance for lapses on valuation of protection business
 - (b) Allowance for negative reserves on valuation of protection business
 - (c) Allowance for lapses on valuation of unit-linked business
 - (d) Allowance for attributable expenses on valuation of unit-linked business

5. Options and Guarantees

(1) Guaranteed Annuity Rate Options:

(a) Method:

For policies with a cash benefit that can be used to buy an annuity on guaranteed terms, the methodology is as follows:

- Calculate the amount of the cash benefit that we have assumed will be converted into an annuity (using the option take-up rates given in section 4(10)).
- Determine the amount of annuity that this cash would buy if it were to be converted on guaranteed terms.
- Calculate the present value of the resulting annuity using the annuitant mortality basis given in section 4(4) and in-payment interest rate basis given in 4(2).
- If the total is greater than the total policy benefit at retirement then add on the difference. Discount the result to valuation date at the discount rate given in section 4(2).
- Add on the reserve for the expenses of administering the annuity.

For policies where the benefit is in the form of an annuity with a guaranteed cash-conversion option, the annuity benefit is converted to cash on the guaranteed terms. The methodology above (for cash contracts) is then applied.

The Regulatory-peak reserve for Guaranteed Annuity Options is compared with the reserve calculated using the following basis:

- Regulatory-peak annuitant mortality assumptions are used (as given in 4(4))
- Regulatory-peak option take-up rates are used (as given in 4(10))

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – With Profits Sub-FundGlobal businessFinancial year ended31 December 2014

- Regulatory -peak annuity interest rates and discounting are used
- Realistic-peak assumptions for persistency are used
- Realistic-peak Final Bonus allowance removed

Realistic-peak assumptions are discussed in more detail in Appendix 9.4A.

If this second reserve is larger than the base Regulatory-peak figure, an allowance for stochastic variation is added to the Regulatory-peak reserve. The allowance at 31 December 2014 is zero.

(b)

(i) Product	Conventional pensions endowment with-profits	Conventional deferred annuity with-profits	Deferred annuity non-profit
(ii) Basic Reserve (£m)	585.6	219.8	282.9
(iii) Spread of outstanding durations:			
0-5 years	38%	45%	23%
6-10 years	34%	34%	29%
11-20 years	28%	19%	45%
over 20 years	0%	2%	4%
(iv) Guarantee Reserve (£m)	588.6	39.3	353.1

Notes on all products shown:

(v)/(vii): There are two main types of guaranteed annuity:

- Payable monthly in arrears, single life, no escalation, guaranteed for five years
- Payable monthly in arrears, single life, no escalation, no guaranteed period.

The Guaranteed Annuity Rate for the business with the guaranteed period is 11.25%. The Guaranteed Annuity Rate for the business without is 11.61%. These rates differ by less than 1% and so no split is shown.

- vi) Increments (where permitted) do not receive the option.
- viii) On retirement before Normal Retirement Date (NRD) Guaranteed Annuity Rates are lost. The exceptions are where retirement occurs between 60 and 75, on ill-health grounds before age 60 or when an early NRD was agreed at outset for S226 contracts.

(2) Guaranteed surrender and unit-linked maturity values:

The With-Profit fund has no unit-linked business.

The non-unit-linked policies with a guaranteed surrender value are certain Unitised With-Profit Life contracts.

No Conventional policies have a guaranteed surrender value. Unitised With-Profit Pensions contracts cannot be surrendered, only transferred or switched; in either case, an MVR would apply if this were to be done before Normal Retirement Date. Retirement under such policies can happen on more than one date without incurring an MVR. Retirement is a contractual exit (not a surrender of the policy) and is explicitly valued.

There are three types of guaranteed surrender value under UWP Life contracts:

- The option to surrender the policy on a certain set of dates without an MVR being applied (a no-MVR guarantee).
- The option to surrender the policy on a certain set of dates with the total benefit being underpinned by the initial premium paid into the policy (a money-back guarantee)
- The option to take a certain level of regular withdrawals without an MVR being applied.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Ltd – With Profits Sub-Fund
Global business	
Financial year ended	31 December 2014

(a) Methodology:

In all three cases above the overall reserve for a policy has been calculated as:

Max([Accumulated Benefit + adjustment], [Prospective reserve for future benefit]).

- The [Accumulated Benefit + adjustment] item is calculated in accordance with INSPRU 1.2.71R(1).
- The [Prospective reserve for future benefit] is calculated as the present value of the benefit paid to the policyholder after allowing for lapses. The basis of the calculation includes assumptions for surrender before the guarantee date(s), an assumption about the percentage of remaining policyholders who choose to surrender on their guarantee date(s) and an assumption for the level of MVR-free regular withdrawals taken by policyholders.

Persistency assumptions are given in item 4(9), along with assumptions about guarantee take-up. The interest rates used in the calculation are given in 4(2).

The guarantee is explicitly valued as part of the main calculation - there is no explicit reserve for it.

The tables show the unit value in force as the guaranteed amount. This represents the amount that would be paid if the policyholder surrendered with a no-MVR guarantee. It is also a proxy for the amount payable under the regular withdrawal guarantee, as a policyholder could ultimately redeem all of their units through regular withdrawals.

Where a spread of duration is shown, duration refers to the next date at which the policyholder could fully surrender with a guarantee (either no-MVR or money-back).

(0)						vi) MVR-free condition	ons	1	
(i) Product name	(ii) basic reserve(£)	(iii) spread of outstanding term	(iv) guarantee reserve (£)	(v) guaranteed amount (£)	1) no-MVR guarantee on full surrender	2) money-back guarantee (full surrender)	3) regular withdrawal guarantee	(vii) in force regular premiums	(viii) increments allowed to policy?
Norwich Capital Plan (10/89 onwards)	210,236,825	26.4% with no-MVR date in 2015;73.6% with no-MVR date in 2016-2019	0	203,898,781	No MVR on 10th anniversary and subsequent 5 yearly anniversaries for continuous investment in the With Profits Fund	None	Aviva reserves the right to apply an MVR on regular withdrawals.	0	Yes but no- MVR guarantee does not apply to increments

Restrictions are made on the amount of regular withdrawals that can be taken. 5% of original investment is current practice.	0	Yes but they do not receive the money- back guarantee

(b)

(3) Guaranteed Insurability Options

- (a) For convertible term or increasing sum insured options, a reserve is held equal to one year's option premium.
- (b) The total sum assured for conversion and renewal options is less than £10million and is therefore not included here in accordance with rule 9.3(b).

(4) Other guarantees and options

(a) Guaranteed Minimum Pensions on Section 32 policies

Section 32 policyholders have a guarantee that the maximum annuity that can be bought with their policy at State Pension Age will not be less than the (revalued) Guaranteed Minimum Pension.

Method/basis:

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – With Profits Sub-FundGlobal businessFinancial year ended31 December 2014

- The Guaranteed Minimum Pension is valued at retirement using the annuitant mortality/inpayment interest rate assumptions shown in sections 4(4)/4(2) respectively.
- This value of benefits is added to a reserve for paying the expenses of administering the GMP.
- The total is compared with the value of the Sum Assured / Regular Bonus to date. If larger, an additional reserve is established (equal to the difference).

The Regulatory-peak reserve for the GMP guarantee is compared with the reserve calculated using the following basis:

- Regulatory-peak annuitant mortality assumptions are used (as given in 4(4))
- Regulatory -peak (statutory valuation) annuity interest rates and discounting are used
- Realistic-peak assumptions for persistency are used
- Realistic-peak Final Bonus allowance removed

Realistic-peak assumptions are discussed in more detail in Appendix 9.4A.

If this second reserve is larger than the base Regulatory-peak figure, an allowance for stochastic variation is added to the Regulatory-peak reserve. The allowance at 31 December 2014 is zero.

The base reserve for the business affected is: £839m

The additional regulatory peak reserve for the GMP guarantee is: £897m

(b) Some group business contains premium rate guarantees for a limited period. No specific reserve for these is considered necessary.

6. Expense reserves

(1) The aggregate amount for expense allowances during 2015 arising from explicit reserves is £18,600,000.

The main sources are:

- The explicit annual maintenance expense charge for conventional business valued on a gross premium basis.
- Investment expenses as provided for by a deduction from the yield on conventional business
- Additional explicit 10% margin on the annual maintenance expense

For details about expense loadings for UWP business see Appendix 9.4 for the Non-Profit Sub Funds.

- (2) Gross Premium Valuation has been used for all business. All allowances for expenses are explicit.
- (3) The 2014 figure for expenses in line 14 of Form 43 includes amounts for prior year adjustments, one-off items and exceptional expenses that are reserved for explicitly elsewhere. Excluding these items, the allowance for 2015 maintenance expenses in 6(1) above is lower than the adjusted Form 43 expense by £1,880,000. Lower expenses are expected to be incurred in 2015 due to significant run-off of the business, in particular endowment policies.
- (4) No reserve is deemed necessary to cover the costs of transacting new business in the year following the valuation date.
- (5) No explicit reserve for maintenance expense overrun has been made because existing provisions for expenses exceed their current levels.

INSPRU 1.2.50R(2) requires us to make prudent provision for expenses allowing for:

- (a) tax
- (b) expenses in the last twelve months and expected future expenses
- (c) impact of expense inflation
- (d) cost of closure to new business 12 months after valuation date.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – With Profits Sub-FundGlobal businessFinancial year ended31 December 2014

We have taken the following action to comply with INSPRU 1.2.50R(2):

- (a) All expenses provisions allow for taxation.
- (b) Our expense provision exceeds expected future expenses levels.
- (c) Expense inflation has been allowed for in the valuation at the rates dictated by the Management Services Agreement. The parameter used for RPI inflation (2.99%) was a best-estimate. By using a best-estimate assumption we are incorporating a margin for prudence into the valuation of expenses (since the gap between the valuation discount rate and expense inflation is far smaller than bestestimate).
- (d) An assessment was made of the cost of closure of the Company to new business at the end of 2014 using the following method and basis of calculation:
 - All sales, marketing and new business administration operations were assumed to cease three months after the date of closure.
 - Allowance was made for statutory redundancy costs.
 - Allowance was made for costs arising from the delay in re-letting properties occupied by the new business areas.
 - Allowance was made for the additional cost that would be incurred through outsourcing existing business administration
 - Allowance was made for other costs incurred on closure to new business such as write-offs on fixed assets.

Allowance was made for the proportion of closure expenses that would be borne by the other subfunds of the Company and Aviva Annuity UK Limited.

No allowance was made for terminating the existing Management Services Agreement charging structure for existing business, as this would be expected to remain in force after closure to new business.

A provision of £1.3m is held to cover the cost of closure.

(6) The UKL&P WP Fund does not hold any reserves for non-attributable expenses.

7. Mismatching Reserves

(1) The mathematical reserves and matching assets, analysed by currency, are as follows.

Currency	Mathematical Reserves (£000)	Matching Assets (£000)	Matched %
Sterling	12,311,383	12,311,383	100%

- (2) No such grouping of liabilities has been needed.
- (3) The fund does not hold a reserve for currency mismatching. The fund has sufficient sterling assets to cover its mathematical reserves.
- (4) The Company is a realistic-basis firm and a resilience capital requirement is no longer required.
- (5) The Company is a realistic-basis firm and a resilience capital requirement is no longer required.
- (6) The Company is a realistic-basis firm and a resilience capital requirement is no longer required.
- (7) INSPRU 1.1.34R(1): "The assets [held by a firm to cover its technical provisions]...must...be of a sufficient amount, and of an appropriate currency and term, to ensure that the cash inflows from those assets will meet the expected cash outflows from the firm's insurance liabilities as they become due."

No further reserve has arisen following consideration of this rule.

Currency mismatching is considered in sections 7(1)-7(3).

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – With Profits Sub-FundGlobal businessFinancial year ended31 December 2014

The assets backing the liabilities do not precisely match them by term. The fund has significant holdings in equity and property assets that have no set maturity date. These assets are held to provide strong performance for policyholders.

Instead, the fund aims to ensure that cash outflows can be met through:

- Incoming premiums
- Income from its assets (dividends, rental income, coupon payments)
- Receipts on redemption from matched fixed interest stocks
- Holding appropriate volumes of cash and liquid assets
- Sales of assets.

There is a risk that the fund may have to sell assets at an unfavourable time, e.g. when prices are temporarily depressed. If the fund has to sell unmarketable assets it may also depress the price through the sale itself. The risk will be very short term; if our liquidity was genuinely an issue then we could sell illiquid assets for cash over the period of a year without distorting the price we would receive (and have used in our asset valuation).

The risk only impacts business where it cannot be passed on to policyholders. For example, the risk is negligible on assets backing Unit Linked business because any reduction in price arising on sale would be passed onto the remaining policyholders through the unit price. On with-profit business, high levels of surrender may lead to higher MVR rates being applied.

To mitigate this risk the fund holds liquid assets (cash, certificates of deposit). It also ensures that a significant proportion of its other assets are invested in highly marketable stocks, in particular government bonds (but also shares issued by large companies).

An estimate of the UKL&P WP Fund's claims amounts for 2015 is £1,866m. Expected income, in 2015, from assets currently held in the fund is £392m and £2,187m is held in deposit-style assets. Premium income for 2014 was around £102m and there is no reason to expect it to fall significantly. The fund also holds an additional £5,855m in approved fixed and variable interest securities some of which we expect could be sold at short notice without altering prices. Accordingly no additional reserve is considered necessary.

8. Other Special Reserves

(1) Mortgage Endowment Promise

The Company has announced its intention that payments on with profit mortgage endowment policies may, if necessary, be topped up at maturity (subject to certain conditions) where there is a shortfall between the claim value and the mortgage originally targeted. Top-up payments can be met from future investment earnings on the free reserves within the UKL&P WP Fund. If investment earnings on the free reserves are not sufficient to meet the top-up payments then the payments may be reduced or eliminated.

Maximum top-up amounts have been communicated to policyholders. We have also advised policyholders that even after the Promise payment has been made they may have a shortfall.

For the purposes of the regulatory valuation these top up payments are treated as discretionary benefits and generally no reserve needs to be held. There are two issues that have led to a provision being established:

- (a) The company has advised policyholders that we will give them at least three years' notice before altering payments under the promise. We have assumed a half-year time lag between the Board making this decision and being able to communicate it to policyholders. This gives a minimum liability of the present value of the payments required for the next three and a half years.
- (b) The company intends that payments will be made while they can be provided for from earnings on the free reserves within the With-Profit fund.

The reserve will be calculated by considering the full liability for payments advised to policyholders in Promise mailings.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – With Profits Sub-FundGlobal businessFinancial year ended31 December 2014

As payment of this amount is contingent on earnings on the free reserves, we test whether this full amount can be paid from these earnings with reference to the stochastic model used for the Realistic peak valuation. If earnings are materially lower than the full reserve we will only reserve for the amount of the promise paid from these earnings. The reduction in reserves at 31 December 2014 for the affordability condition is zero.

The amount of provision is £358.5m.

(2) Continued Beyond Maturity (CBM) Data Quality Reserve

A provision of £20m is held to cover the risk that poor data on CBM policies is producing an inadequate reserve.

(3) **Product Governance Provision**

A reserve has been made to provide for estimated future rectification costs arising from known product governance issues.

The amount of provision is £41.2m.

9. Reinsurance

- (1) The UKL&P WP Fund does not cede any long-term business on a facultative basis to a reinsurer who is not authorised to carry on insurance business in the United Kingdom.
- (2) The UKL&P WP Fund has no reinsurance treaties where it is the cedant and where the reserves or premiums exceed £10m.
- (3) There is a treaty that reinsures the business in the UKL&P Belgian Sub-Fund to Delta Lloyd.
 - (a) The treaty reinsures out all liability from the UKL&P Belgian Sub-Fund to Delta Lloyd.
 - (b) Delta Lloyd receives the annual premiums payable by the policyholders of the Belgian Sub-Fund. During 2014 these totalled £18,000,000.
 - (c) There are no deposit-back arrangements under the treaty.
 - (d) The treaty is closed to new business.
 - (e) There is no undischarged obligation for the insurer.
 - (f) The amount of mathematical reserves ceded under the treaty is £114,118,000.
 - (g) The UKL&P Belgian Sub-Fund retains no liability for new policies being reinsured.
 - (h) The reinsurer is not authorised to carry on insurance business in the United Kingdom.
 - (i) The Company is not connected with the reinsurer.
 - (j) The treaty is not subject to any material contingencies.
 - (k) No provision was made for refund of reinsurance commission in the event of lapse or surrender of the contracts.
 - (I) The treaty is not a financing arrangement.

The UKL&P WP Fund and the UKL&P Belgian Sub-Fund do not have any financing arrangements.

10. Reversionary (annual, regular) bonus

(1)

Product	Amount of Gross mathematical reserve (£m)	Regular bonus (2013)	Regular bonus (2014)	Guaranteed bonus (2014)
Conventional Life				
Super-compound series (all business)	1,751.5	0% SA / 0.5% RB	0% SA / 0.5% RB	0.00%
Simple Bonus Whole Life	10.5	16%	16%	0.00%
Conventional Pensions				
Individual & Group Pensions (excl With-Profit Annuity)	3,336.2	0% SA / 0% RB	0% SA / 0% RB	0.00%
Group Defined Benefits	8.3	0.00%	0.00%	0.00%
With-Profits Annuity				
Pre 2013 purchase	155.2	1.50%	1.50%	0.00%
2013 purchase	155.2	2.25%	2.25%	0.00%
Unitised Life				
Units without regular bonus guarantee	679.0	0.75%	1.25%	0.00%
Units with regular bonus guarantee	239.8	2.50%	2.50%	2.50%
Unitised Pensions				
Units without regular bonus guarantee	2,374.8	1.25%	1.75%	0.00%
Units with regular bonus guarantee	2,825.8	4.00%	4.00%	4.00%
Belgium (in the UKLAP Belgium sub-fund)	84.3	0.00%	0.00%	0.00%

The regular bonus shown for 2014 for unitised business is that declared at the end of 2013 and applied to policies during 2014. The regular bonus shown for 2014 for conventional business is the rate declared at the end of 2014, that is added to policies at their next policy anniversary in 2015.

- (2) The figures for bonus awarded on Unitised with-profit business show the percentage increase in unit price during the year.
- (3) For super-compound business both rates are shown (the rate applying to the base benefit is shown as a percentage of SA, the rate applying to regular bonus awarded to date is shown as a percentage of RB).
- (4) The figures above do not represent a weighted average

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – Provident Mutual Sub-FundGlobal businessFinancial year ended31 December 2014

1. Introduction

- (1) The valuation date is 31 December 2014.
- (2) The previous valuation was completed with an effective date of 31 December 2013.
- (3) An interim valuation was carried out with an effective date of 30 June 2014 for the purposes of rule 9.3A.

2. Product Range

There have not been any significant changes to products during the financial year. The fund is closed to new business except by increment.

3. Discretionary charges and benefits

- (1) The Provident Mutual Sub-Fund (PM fund) has no option to apply a market value reduction on any of its with-profit business.
- (2) There have been no changes to premiums on reviewable protection policies.
- (3) The fund does not have any non-profit deposit administration benefits.
- (4) Service charges:

Impact Range (including PRIA/IIA with incorrect cancellation notice in 1989)

The charges for the unit linked product range were increased by 0.5%. The exception is for charges on Compact and Everyman which increased by 2.7%.

Defined Benefit Schemes

Deferred Allocation Funding:

The administration fee increased by 0.5%.

- (5) There have been no changes to benefit charges on linked policies.
- (6) There have been no changes to unit management charges or notional charges to accumulating with profits policies.
- (7) Units are at the most recently available price.

Where an instruction, payment and all our requirements are received for a transaction before 8:00am on a business day, then units are allocated at the unit price. Where the instruction, payment and all our requirements are received after 8:00am then units are allocated at the next available unit price.

- (8) When a capital gain is realised on the sale of an asset in a unit-linked fund, and this gain cannot be offset by past capital losses, then the capital gains tax due would be retained in the fund until the next periodic settlement of tax due. This applies in respect of tax on notional realisations under the Finance acts as well as tax on realised capital gains. The tax rates used in calculating these deductions are as specified in section 3.9 below.
- (9) The internal linked funds are taxed on investment gains at a rate which reflects the position of each fund when considered as a standalone entity but with some regard to the corporate tax position. Rates are reviewed frequently to ensure that they reflect both changes within the fund and changing market conditions. In the calculation of unit prices allowance is made for indexation where applicable and also for the expected timing of the policyholder tax payment.

The tax rate applied to realised gains varied by fund in the range 1.4% to 20% during 2014. The rate applied to unrealised gains varied by fund in the range 9.0% to 20% during the year to 31 December 2014.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – Provident Mutual Sub-FundGlobal business31 December 2014

Credit is given within unit prices for the tax benefit that may arise in future from realised and unrealised losses. For funds with an excess of realised/unrealised losses over gains the rate applied to the losses varied by fund in the range 0.9% to 20.0% during the year to 31 December 2014.

(10) The Company derives no financial benefit in respect of collective investment fund units held by the internal linked funds. The Company's policy on receiving discount, commission or other allowance when purchasing, selling or holding units in collective investment funds is to pass the full benefit onto the fund.

4. Valuation basis (other than for special reserves)

(1) Valuation methodology

For the Company, 1% of gross mathematical reserves exceed £10m. A limit of £10m will be applied to all subfunds of the Company when considering whether a group of products is material.

A gross premium method of valuation was used for Conventional with-profit and Conventional non-profit business.

The Accumulating with-profit business was valued as follows:

- The benefit that had accrued prior to valuation date was rolled forward at the guaranteed rate of interest (where appropriate).
- The benefit at retirement was adjusted for the value of any Guaranteed Annuity Option on the contract.
- The result was discounted back to valuation date at the valuation interest rate.
- A reserve for future expenses under the contracts was also held.

Some business has a surrender value that is determined by the value of the accumulated benefit at date of surrender. A comparison with the surrender value has been made in such cases and no material difference was found.

The Deferred Allocation Funding Contract was valued as the benefit that had accumulated to valuation date plus a prospective reserve for expenses. This ensured that the total reserve was greater than both the discounted value of the future benefits and expenses and the current accumulated benefit.

Principles adopted in the valuation of particular contracts were as follows:

Assurances

Limited premiums for whole life assurances have been valued using the number of annual premiums outstanding at the valuation date for each policy.

For the valuation of endowment assurances, a maturity age of $59\frac{1}{2}$ was assumed if no Date of Birth was recorded on the system.

Where there is an option to vary the maturity date under certain flexible endowment assurances, the business has been classified according to the earliest date. Where the earliest date was before the valuation date, the reserve was calculated as the amount (excluding final bonus) that would have been payable on the valuation date if that date had been chosen as the maturity date.

The valuation factors used included adjustments for early payment of claims where appropriate.

For individual with profit income benefit policies a reserve of 40% of the office premiums was made. The value of the existing regular bonuses was calculated prospectively.

<u>Annuities</u>

For policies approved under Chapter III of Part XIV of the Income and Corporation Taxes Act 1988 the reserves were calculated by reference to the benefits already purchased or to the accumulated premiums available to purchase benefits (if benefits are not determined until death or retirement). For individual deferred annuities, some of which provide for annuities that increase, the reserves were calculated using benefits already purchased adjusted to an equivalent level annuity. For some annuities the equivalent cash amounts were valued. Where premiums are due to be returned in the event of death before vesting date but the death benefit has not been specifically recorded, interest only functions were used in the calculations in respect of the period of deferment.

Valuation report – IPRU (INS) Appendix 9.4 Name of insurer Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund Global business Financial year ended 31 December 2014

For group policies where the premiums paid (less expenses) are accumulated with interest and bonus interest in a fund account until required for the provision of retirement benefits the reserve was taken to be the amount standing in such fund accounts.

For certain group deferred annuities under recurring single premium schemes, the amounts of pension allocated and purchased up to recent scheme anniversary dates (or the equivalent cash amounts allowing for profits in possession where applicable) were calculated and valued. Additional reserves were made in respect of unallocated premiums received since the relevant anniversaries.

Where a contract provides an option at vesting to re-apply a guaranteed cash equivalent of the benefits to secure an annuity on the terms current at the time, allowance was made for the option as described above.

Certain assurances and annuities have been issued with the facility that premiums be waived in the event of the prolonged disability of the life assured. These additional benefits have been valued by taking a multiple of the additional premiums payable for the facility.

(2) Valuation interest rates:

A table of all valuation interest rates used is given below.

Product	Interest rate 31 December 2014	Interest rate 31 December 2013
Life with-profit assurances	1.80%	2.85%
Life non-profit business	1.30%	2.30%
Pension accumulating with-profit (excluding Compact)	2.00%	3.20%
Compact pension accumulating with-profit	1.85%	2.65%
Non profit immediate annuity	2.05%	3.10%
With profit immediate annuity	2.00%	3.20%
Pension Deferred Annuity Non Profit and Guaranteed Annuity Options		
In payment	2.05%	3.20%
In deferment	2.25%	3.40%
Pension Deferred Annuity With Profit and Guaranteed Annuity Options		
In payment	2.00%	3.20%
In deferment	2.00%	3.20%

(3) Risk adjusted yield

Equity assets

The allowance for credit risk on equities is two-fold. Firstly, a deduction is applied, which is determined as 25% of the excess of the equity yield over the Long Term Gilt Yield. The equity yield is then capped at a maximum of 10%.

For the purposes of the valuation the average deduction from the yield on equities held at 31 December 2014 was:

Deduction from Yield	PMSF
Impact of 25% Spread	0.27%
Impact of 10% Cap	0.08%
Total Deduction	0.35%

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd - Provident Mutual Sub-FundGlobal businessFinancial year ended31 December 2014

Property assets

The property assets have been ordered by yield and divided into different categories. Firstly, a deduction is applied to the grouped yields, which is determined as 25% of the excess of the yield over the Long Term Gilt Yield. The property yield in each category is then capped at a maximum of 10%. This means that very low-yielding assets retain the low rate but high-yielding assets are capped.

The reduction on the average yield on property assets is as follows:

Deduction from Yield	PMSF
Impact of 25% Spread	1.26%
Impact of 10% Cap	0.00%
Total Deduction	1.26%

Fixed interest securities

The allowance for credit risk on bonds is two-fold. For 31 December 2014 a deduction equivalent to 51% of the spread over gilts where the spread has been calculated after capping the bond yield at a maximum of 200% of the yield on a representative iBoxx index.

For the purposes of the valuation the average deduction from the yield on fixed interest securities (excluding Approved fixed interest i.e. gilts and other bonds issued by approved UK and international public sector bodies) held at 31 December 2014 was:

Deduction from Yield	PMSF
Impact of Cap	0.00%
Impact of 51% Spread	0.72%
Total Deduction	0.72%

For Deposits, the equivalent deduction was 0.10%.

(4) Mortality assumptions

The table below shows the mortality basis for business written by the fund.

Product	Mortality basis 31 December 2014	Mortality basis 31 December 2013
Life Assurances		
Assurances - Whole Life	104.9% AM00/AF00 sel	104.9% AM00/AF00 sel
Assurances – Endowments	87.4% AM00/AF00 sel	93.3% AM00/AF00 sel

Payment (Individual)	95.0% PCMA00 / 95.5% PCFA00	90.0% PCMA00 / 88.5% PCFA00
Non-Profit Annuity in Payment (Group):		
	95.0% PCMA00 / 95.5% PCFA00	90.0% PCMA00 / 88.5% PCFA00
With-Profit Annuity in Payment (Group):		
	95.0% PCMA00 / 95.5% PCFA00	90.0% PCMA00 / 88.5% PCFA00

Notes on tables:

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd - Provident Mutual Sub-FundGlobal businessFinancial year ended31 December 2014

- M tables apply to male lives, F tables to female lives.
- Smoker / Non-Smoker table used where smoker status data is available, otherwise Combined table used
- <u>Annuitant mortality</u>: allowance has been made for future improvements to mortality. The base tables (% of PCXA00) are assumed to apply as at 31 December 2000 from that date improvements are expected. The allowance for improvements is as follows:

	31 December 2014	31 December 2013
Males	CMI_2013_M [1.75%], applicable from 2001 to 2013	CMI_2012_M [1.75%], applicable from 2001 to 2012
	CMI_2013_M[1.75%] plus 0.5% p.a., applicable from	CMI_2012_M[1.75%] plus 0.5% p.a., applicable from
	2014	2013
Females	CMI_2013_F [1.5%], applicable from 2001 to 2013	CMI_2012_F [1.5%], applicable from 2001 to 2012
	CMI_2013_F[1.5%] plus 0.5% p.a., applicable from	CMI_2012_F[1.5%] plus 0.5% p.a., applicable from
	2014	2013

• There are no products where the assurance mortality basis is expressed as 'modified table'.

Expectation of Life

The table below shows the required examples for expectation of life using the base mortality tables, percentage adjustments and improvement factors quoted above.

	Expectation of Life for annuitant aged	Expectation of Life for annuitant aged	Expectation of Life from age 65 for annuitant aged	Expectation of Life from age 65 for annuitant aged 55
Table Description	65 on 1/1/2015	75 on 1/1/2015	45 on 1/1/2015	on 1/1/2015
95% of PCMA00 plus CMI_2013_M[1.75%] applied from 2001, plus 0.5% p.a. from 2014	25.4	15.5	29.2	27.3
95.5% of PCFA00 plus CMI_2013_F[1.5%] applied from 2001, plus 0.5% p.a. from 2014	27.0	17.0	30.3	28.7

Allowance for future changes in mortality where not implicit in the basis:

There are no explicit reserves for alterations to mortality. All future changes are made to the tables used to calculate base mathematical reserves.

Allowance/reserve for:

- (a) any possible detrimental impact of significant changes in the incidence of disease on the mortality experience of the insurer;
- (b) developments in medical science on the mortality experience of the insurer:

For certain categories of options further AIDS reserves have been set up:

- For temporary assurances with a guaranteed option to convert or renew without furnishing further evidence of health it has been assumed that 50% of policyholders who will contract AIDS have exercised the option most expensive to the company.
- For mortgage-related endowment assurances with a guaranteed option to increase the sum assured within certain limits in the event of an increase in mortgage the percentage assumed is 10%.
- For continuation options under group policies it has been assumed that 10% of the "at risk" membership leaves each year for the next 10 years (or until the expiry of the guarantee of terms for existing members if earlier), and that half of these exercise the option most expensive to the company.

The total additional reserve for AIDS is £1.6m.

The remaining margins in the published mortality and morbidity bases are considered sufficient to provide for adverse deviations in experience arising from other causes. No additional reserves are therefore held.

(5) Morbidity Assumptions

Valuation report – IPRU (INS) Appendix 9.4 Name of insurer Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund Global business 31 December 2014

The gross reserve for PHI business is less than £10m.

(6) Expense assumptions:

Expense assumptions are taken as 120% of the amounts detailed in the Management Services Agreement (MSA). The loadings are used to set a long-term assumption for additional costs arising within the business (e.g. project costs, regulatory fees, audit fees) and to give a margin for adverse deviation.

Expense levels are assumed the same for premium-paying and paid-up policies.

The table below shows the per-policy expenses for 2013 and 2014 (including loadings).

<u>1. PM</u>	Existing Business Admin Fee		
Product Code	Category	2014	2013
120	Conventional endowment with-profits OB saving	38.44	37.43
125	Conventional endowment with-profits OB target cash	38.44	37.43
165	Conventional deferred annuity with-proifts	38.44	37.43
700	Life property linked single premium	38.44	37.43
715	Life property linked endowment regular premium - saving	38.44	37.43
720	Life proerty linked endowment regualr premium - target cash	38.44	37.43
725	Individual pension property linked	38.44	37.43
735	Group money purchase pensions property linked	30.95	30.14

Assumed future expense inflation:

2.99% per annum (RPI as set out by the MSA agreement)

Zillmer adjustments:

No Zillmer adjustments were made to net premium reserves.

Investment expenses:

A reserve is held for investment expenses assumed at 0.09%.

Tax Relief:

Tax relief on expenses on BLAGAB business has been assumed using a rate of 20.00%.

No allowance has been made for tax relief in respect of GRB (Gross Roll Up) business

(7) Unit Linked policies: basis for non-unit reserves.

Non-unit reserves are held in the Company's New and Old With Profit Sub Funds, because non-unit cashflows are transferred to these funds. The basis used to calculate these reserves is shown in the Appendix 9.4 report for these funds.

(8) **Bonus Assumptions**:

Conventional with-profit business:

The Company is a realistic basis life firm. Accordingly, no allowance has been made for future annual or final bonus on Conventional with-profit business. This is consistent with INSPRU1.2.31G. There are no guarantees relating to future annual or final bonus on this business.

Accumulating with-profit business

The business does not have guaranteed regular bonus rates. However, some products have guaranteed interest rates. These are incorporated into the valuation of the business. For more details on guaranteed interest rates, please see the table in section 10(1).

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund
Global business	
Financial year ended	31 December 2014

With-Profits Annuity:

Air France business has a guaranteed regular bonus rate of 5%. This has been used for projection of the liability. No other business has this guaranteed rate.

(9) **Persistency assumptions:**

We have not assumed any lapses in the valuation except as follows:

For Accumulating with-profit business, we have assumed 100% persistency until the first date at which the policyholder can retire without penalty. We have assumed that all policyholders would choose to exit on the first such date. If policyholders have a window where they can retire without penalty, and they find themselves within the window at retirement date, they are assumed to retire immediately. This assumption is prudent because all of the guaranteed interest rates on these policies are below the valuation interest rate.

(10) Other basis items

Option Take-Up Rates

• Guaranteed Annuity Rate Options:

We have assumed that current option take-up is 93%. These include a margin of 10%.

These rates are assumed to increase by 1% per annum to 95%.

Taxation

Valuation interest rates on Life business include an allowance for taxation. This allowance has been arrived at using the following assumption:

- A tax rate of 20% has been assumed in respect of income on Fixed Interest and Property assets (for Life business). No allowance has been made for taxation on equity income.
- (11) We allow for Equity Futures in the matching assets used to hypothecate against reserves.
- (12) During the reporting period, the fund has made no changes to valuation methodology in respect of the following changes in INSPRU valuation rules:
 - (a) Allowance for lapses on valuation of protection business
 - (b) Allowance for negative reserves on valuation of protection business
 - (c) Allowance for lapses on valuation of unit-linked business
 - (d) Allowance for attributable expenses on valuation of unit-linked business

5. Options and Guarantees

(1) Guaranteed Annuity Rate Options:

(a) Method:

For policies with a cash benefit that can be used to buy an annuity on guaranteed terms, the methodology is as follows:

- Calculate the amount of the cash benefit that we have assumed will be converted into an annuity (using the option take-up rates given in section 4(10)).
- Determine the amount of annuity that this cash would buy if it were to be converted on guaranteed terms.
- Calculate the present value of the resulting annuity using the annuitant mortality basis given in section 4(4) and in-payment interest rate basis given in 4(2).
- If the total is greater than the total policy benefit at retirement then add on the difference. Discount the result to valuation date at the discount rate given in section 4(2).

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – Provident Mutual Sub-FundGlobal business31 December 2014

- Add on the reserve for the expenses of administering the annuity.
- For policies past normal retirement age, we are assuming that the Guarantee will be taken immediately.

The Regulatory-peak reserve for Guaranteed Annuity Options is compared with the reserve calculated using the following basis:

- Regulatory-peak annuitant mortality assumptions are used (as given in 4(4))
- Regulatory-peak option take-up rates are used (as given in 4(10))
- Regulatory-peak annuity interest rates and discounting are used
- Realistic-peak assumptions for persistency are used
- Realistic-peak Final Bonus allowance removed

Realistic-peak assumptions are discussed in more detail in Appendix 9.4A.

If this second reserve is larger than the base Regulatory-peak figure, an allowance for stochastic variation is added to the Regulatory-peak reserve. The allowance at 31 December 2014 is zero.

(h)
J	U)

(i) Product Name	Personal Pension Plan	Products with GAO excluding Personal Pension Plan

6-10 years	6.2%	15.8%	
11-20 years	0.9%	9.5%	
over 20 years	0.0%	1.5%	
(iv) guarantee reserve (£m)	81.6	227.8	
(v) guaranteed annuity rate	10.8%	10.3%	
(vi) increments allowed?	Yes	Yes but GAO does not apply	
(vii) form of annuity	Payable monthly in advance, single life, guaranteed for 5 years	Payable monthly in advance, single life, guaranteed for 5 years	
(viii) retirement ages	60 to 75 permitted	50 to 75 permitted	

(2) Guaranteed surrender and unit-linked maturity values:

Non-Unit-linked:

The PM fund does not offer guaranteed surrender values. On surrender policyholders may receive a benefit that is set by a formula but the parameters will be determined by economic conditions at the date of surrender. Accumulating with-profit pensions policies may allow retirement within a range of dates but this is not the surrender of the contract.

Unit-Linked:

Pension Assured Fund/British Rail Assured Fund

The basic reserve held in respect of units invested in these funds is £770m. The unit benefits at maturity are covered by the UKL&P Non-Profit fund. There is a potential investment risk arising from guaranteed maturity values; the PM fund retains this risk for much of the business.

Units in these funds have a guaranteed price of £1 at the selected pension date or on earlier death. The guaranteed amount is £771m. The possible impact of this guarantee is mitigated by choosing assets for the fund that approximately immunise the guaranteed liabilities (and by the mechanism for bonus calculation).

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer

Global business

Financial year ended

Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund

The Pension Assured Fund is closed to new business and additional contributions other than regular contributions, automatic and ad-hoc increases under existing policies.

The distribution of outstanding duration is shown below:

31 December 2014

Durations	0-4	5-9	10-14	15-19	20-24	25-29	30+
Proportion	17%	22%	43%	13%	4%	0%	0%

(3) Guaranteed Insurability Options

- (a) For the following classes of business, the reserve held was equal to the proportion of the office premiums attributable to the options:
 - Certain policies on the life of or for the benefit of children contain guaranteed options, usually on the child's 18th or 21st birthday.
 - Under certain temporary assurances there is an option to convert to other classes without furnishing further evidence of health.
 - Certain endowment and whole life assurances include options to take out further such policies at specified future dates or on the occurrence of specified events (e.g. moving house) without furnishing further evidence of health.
 - Under certain group policies and certain individual non-linked pension arrangements the rates of premium applicable to additional benefits are guaranteed for a limited period.
- (b) The total sum assured for conversion and renewal options is less than £10 million and is therefore not included here in accordance with rule 9.3(b).

(4) Other guarantees and options

There are no other material guarantees and options offered by the fund.

6. Expense reserves

(1) The aggregate amount for expense allowances during 2015 arising from explicit reserves is £8,800,000.

The main sources are:

- The explicit annual maintenance expense charge
- Investment expenses
- Additional explicit margins
- (2) Gross Premium Valuation has been used for all business. All allowances for expenses are explicit.
- (3) The 2014 figure for expenses in line 14 of Form 43 includes amounts for prior year adjustments, one-off items and exceptional expenses that are reserved for explicitly elsewhere. Excluding these items, the allowance for 2015 maintenance expenses in 6(1) above exceeds the adjusted Form 43 expense by £2,260,000. The difference is due to margins in the valuation basis and changes in business volumes between 2014 and 2015.
- (4) Under the PM Sub Fund Scheme of Transfer, no charges are made to the PM Fund in connection with the acquisition of new business (other than incremental business).
- (5) The PM Fund is closed to new business.

An assessment was made of the cost of closure of the Company to new business at the end of 2014 using the following method and basis of calculation:

- All sales, marketing and new business administration operations were assumed to cease three months after the date of closure.
- Allowance was made for statutory redundancy costs.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund
Global business	
Financial year ended	31 December 2014

- Allowance was made for costs arising from the delay in re-letting properties occupied by the new business areas.
- Allowance was made for the additional cost that would be incurred through outsourcing existing business administration
- Allowance was made for other costs incurred on closure to new business such as write-offs on fixed assets.

Allowance was made for the proportion of closure expenses that would be borne by the other sub-funds of the Company and Aviva Annuity UK Limited.

No allowance was made for terminating the existing Management Services Agreement charging structure for existing business, as this would be expected to remain in force after closure to new business.

A provision of £0.8m is held to cover the cost of closure.

(6) No expenses have been treated as non-attributable.

7. Mismatching Reserves

(1) The mathematical reserves and matching assets, analysed by currency, are as follows.

Currency	Mathematical Reserves (£000)	Matching Assets (£000)	Matched %
Sterling			100%

- (2) No such grouping of liabilities has been needed.
- (3) The fund does not hold a reserve for currency mismatching. The fund has sufficient sterling assets to cover its mathematical reserves.
- (4) The Company is a realistic-basis firm and a resilience capital requirement is no longer required.
- (5) The Company is a realistic-basis firm and a resilience capital requirement is no longer required.
- (6) The Company is a realistic-basis firm and a resilience capital requirement is no longer required.
- (7) INSPRU 1.1.34R(1): "The assets [held by a firm to cover its technical provisions]...must...be of a sufficient amount, and of an appropriate currency and term, to ensure that the cash inflows from those assets will meet the expected cash outflows from the firm's insurance liabilities as they become due."

No further reserve has arisen following consideration of this rule.

Currency mismatching is considered in sections 7(1)-7(3).

The assets backing the liabilities do not precisely match them by term. Instead, the fund aims to ensure that cash outflows can be met through:

- Income from its assets (dividends, rental income, coupon payments)
- Receipts on redemption from matched fixed interest stocks
- Holding appropriate volumes of cash and liquid assets
- Sales of assets.

The fund is closed to new business and has little premium income in comparison to its claims.

There is a risk that the fund may have to sell assets at an unfavourable time, e.g. when prices are temporarily depressed. If the fund has to sell unmarketable assets it may also depress the price through the sale itself. The risk will be very short term; if our liquidity was genuinely an issue then we could sell illiquid assets for cash over the period of a year without distorting the price we would receive (and have used in our asset valuation). The PM fund has few unmarketable assets (e.g. no direct property).

Valuation report – IPRU (INS) Appendix 9.4

 Name of insurer
 Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund

 Global business
 31 December 2014

The PM fund holds some deposit-style assets, and uses income from Fixed Interest stocks to back its liabilities by term. However, it does also ensure that it holds highly liquid Fixed Interest assets, particularly government bonds.

An estimate of the PM fund's non-linked claims amounts for 2015 is £196m. Expected income, in 2015, from assets currently held in the fund is £69m and £14m is held in deposit-style assets. The fund also holds an additional £1,201m in approved fixed and variable interest securities some of which we expect could be sold at short notice without altering prices. Expected premium income is £15m. Accordingly no additional reserve is considered necessary.

8. Other Special Reserves

(1) Unpaid transfer of funds in respect of Guaranteed Annuity Options to UKA

A reserve of £75m is held in respect of outstanding transfers from PM Fund to UKA Funds to fund the full cost of providing guaranteed annuity options.

(2) Guaranteed Minimum Pension Reserve

An additional reserve of £10m is held to cover future cost of providing guaranteed minimum pensions.

9. Reinsurance

- (1) The PM fund does not cede any business on a facultative basis to a reinsurer who is not authorised to carry on insurance business in the United Kingdom.
- (2) There are no reinsurance arrangements that satisfy the conditions in either 9.2(a), (b) or (c).

retiring between 1998 and 2002	48.1	0.00%	0.00%	0.00%
retiring 2003 and later	28.9	0.50%	0.50%	0.00%

The regular bonus shown for 2014 for conventional business is the rate declared at the end of 2014, that is added to policies at their next policy anniversary in 2015.

- (2) There is no Unitised with-profit business in the PM Fund.
- (3) For super-compound business both rates are shown (the rate applying to the base benefit is shown as a percentage of SA, the rate applying to regular bonus awarded to date is shown as a percentage of RB).
- (4) The figures above do not represent a weighted average.

Valuation report – IPRU (INS) Appendix 9.4

 Name of insurer
 Aviva Life & Pensions UK Limited – With-Profit Sub-Fund 5

 Global business
 31 December 2014

1. Introduction

- (1) The valuation date is 31 December 2014.
- (2) The date of the previous valuation was 31 December 2013.
- (3) An interim valuation was carried out with an effective date of 30 June 2014 for the purposes of Rule 9.3 (5).

Throughout the text below, NWL refers to National Westminster Life Assurance Ltd and RSA refers to Royal Scottish Assurance Plc. With profit business was transferred from the long-term funds of these companies in 2011.

2. Product range

There have been no significant changes to the product range (i.e. excluding updating of policy fees) during 2014. The fund is closed to new with-profit business. All with-profit liabilities are fully reinsured.

3. Discretionary charges and benefits

(1) WPSF5 has the option to apply a market value reduction (MVR) on the encashment of unitised with-profit units of the fund. The table below shows the period during which an MVR applied to ex-NWL business during 2014. No market value adjustments were applied to ex-RSA business during 2014. The table is split by year of policy entry and product type. Entries marked N/A mean that an MVA was not applied to that product type / year of entry combination.

Ex-NWL business

The level of applicable MVA depends on the year of entry and the level of guaranteed regular bonus.

Market Value Adjustments	Years of entry			
Date applicable from	Regular premium life	Regular premium pensions	Single premium pensions	
Pre 1 February 2013	N/A	N/A	1998 Q2 -2001 Q3 2007 Q1	
1 February 2014	N/A	N/A	1998 Q2 – 2001 Q3 2007 Q1	
1 August 2013	N/A	N/A	1998 Q2-2001 Q3	

- (2) Not applicable
- (3) The fund does not have any non-profit deposit administration benefits.
- (4) Service charges on all unit linked policies (deducted monthly via cancellation of units) were increased to reflect inflation in line with the National Average Earnings Index / Average Weekly Earnings Index over the same period. Increases were in the range 0.00% to 1.22% depending on policy type. For ex-RSA business, the cumulative increase in price since the policy was first written cannot exceed the cumulative increase in the index over the same period.
- (5) There were no changes to benefit charges (mortality etc.) on unitised with-profits business during the year.
- (6) There were no changes to unit management charges on unitised with-profits business during the year.
- (7) Not applicable. WPSF5 does not have any internal linked funds. Some policies in WPSF5 may also invest in the ex-NWL and ex-RSA internal linked funds of Non-Profit Sub-Fund 1.
- (8) Not applicable.
- (9) Not applicable.
- (10) Not applicable.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer

Global business

Financial year ended

31 December 2014

4. Valuation basis (other than for special reserves)

The table below sets out the product codes which are used in various parts of Section 4 which follows.

Product Code	Product Name	
515	Life UWP Endowment Regular Premium – Target Cash	
525	Individual Pensions UWP	

Aviva Life & Pensions UK Limited – With-Profit Sub-Fund 5

(1) Valuation methodology

For the Company, 1% of gross mathematical reserves exceed £10m. A limit of £10m will be applied to all subfunds of the Company when considering whether a group of products is material.

For Unitised With-Profits contracts, the unit liabilities were taken as the greater of:

a) the bid value of the units

b) the prospective liability that would arise assuming the units increase in future at the guaranteed bonus rates and are then discounted at the respective valuation discount rates.

For ex-RSA regular premium pensions contracts the unit reserve is based on the "actuarially funded" units which are the units deemed allocated to the contracts reduced by the value of future renewal fund charges under the contract. This process is subject to the value of the actuarially funded units always being at least equal to the surrender or transfer value of the contract. For most pensions contracts there are surrender penalties which cease prior to the maturity date and so the normal actuarial funding factors have been modified to anticipate the required increase in unit value at the point at which surrender penalties cease.

In addition, a non-unit reserve was calculated by projecting cashflows on a monthly basis for each month that the policy was expected to remain in force. Where the cashflow in any future month was found to be negative, the negative was offset where possible by positive cashflows in previous months. For any future month where this was not possible, then a positive sterling reserve has been set up at the valuation date.

In projecting cashflows, allowance was made for future expenses associated with each contract on a per policy basis, as well as for mortality (where applicable) at the levels of cover appropriate at the valuation date. All perpolicy expenses and service charges were assumed to increase annually in line with an assumed rate of inflation.

No allowance was made for any future increases in premiums or benefits.

For policies under which waiver of premium benefit is an option and has been chosen, an additional reserve has been set up in respect of this benefit. This has been calculated as a multiple of the waiver premium. A separate reserve has been set up for waiver claims in payment.

For ex-NWL mortgage endowment plans a prudent allowance has been made for lapses.

(2) Valuation interest rates

The interest rates used at the end of the financial year and at the end of the previous financial year are set out below:

Product codes	Product	31 Dec 2014	31 Dec 2013
515	Life sterling reserves	0.0%	2.8%
525	Pensions sterling reserves	0.0%	3.5%

At 31 December 2013, yields on short term assets held were not sufficient to support the interest rates shown above. In accordance with INSPRU 3.1.45 the valuation interest rate was restricted in the first three years to reflect yields on the assets held. Reserves held in Non-Profit Sub-Fund 1 covered an allowance for this restriction. At December 2014, the interest rates were reduced to zero.

Valuation report - IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Limited – With-Profit Sub-Fund 5Global businessFinancial year ended31 December 2014

(3) Adjustment to yield for credit risk

As Valuation interest rates have been set to zero, there is no explicit deduction for credit risk.

(4) Mortality assumptions

The mortality bases used at the end of the financial year and at the end of the previous financial year are as follows:

Product codes	Product	31-Dec-14	31-Dec-13
	UWP life		
	Flexible Mortgage Plan		
	Male non-smoker	57.2% AMC00 (2)	58.30% AMC00 (2)
515	Male smoker	114.4% AMC00 (2)	116.60% AMC00 (2)
	Female non-smoker	57.2% AFC00 (2)	58.30% AFC00 (2)
	Female smoker	114.4% AFC00 (2)	116.60% AFC00 (2)
	Mortgage Endowment Plan		
	Male non-smoker	78.0% AMC00 (2)	79.50% AMC00 (2)
515	Male smoker	135.2% AMC00 (2)	185.50% AMC00 (2)
	Female non-smoker	78.0% AFC00 (2)	79.50% AFC00 (2)
	Female smoker	135.2% AFC00 (2)	185.50% AFC00 (2)
	UWP pensions (ex-RSA)		
525	Male	83.20% AMC00 (2)	84.80% AMC00 (2)
525	Female	83.20% AFC00 (2)	84.80% AFC00 (2)
	UWP pensions (ex-NWL)		
	Male non-smoker	78.0% AMC00 (2)	79.50% AMC00 (2)
525	Male smoker	135.20% AMC00 (2)	137.80% AMC00 (2)
525	Female non-smoker	72.80% AFC00 (2)	74.20% AFC00 (2)
	Female smoker	135.20% AFC00 (2)	137.80% AFC00 (2)

The assumptions for future mortality experience contain margins over and above current best estimates for such experience. This provides a margin to anticipate significant, adverse change in mortality experience as a result of changing disease incidence.

(5) Morbidity assumptions

There are no liabilities within WPSF5 that require morbidity assumptions.

Valuation report - IPRU (INS) Appendix 9.4

Name of insurer

Global business

Financial year ended

31 December 2014

(6) Expense assumptions

The expense assumptions used in the valuation are as follows:

Product codes	Product	31 Dec 2014	31 Dec 2013
	UWP life		
515	Flexible Mortgage Plan	80.27	77.69
515	Mortgage Endowment Plan	29.53	28.59
	UWP pensions (ex-RSA)		
525	Executive Pension Plan (regular premium) pre Oct 1997	135.46	130.44
525	Executive Pension Plan (single premium/paid up) pre Oct 1997	101.59	97.83
525	Personal Pension Plan (regular premium) pre Oct 1997	87.29	84.49
525	Personal Pension Plan (single premium/paid up) pre Oct 1997	65.46	63.35
	UWP pensions (ex-NWL)		
525	Personal Pension Plan (regular premium)	32.13	31.11
525	Personal Pension Plan (single premium/paid up)	24.07	23.30
525	Top Up Pension Plan (regular premium)	32.13	31.11
525	Top Up Pension Plan (single premium/paid up)	24.07	23.30

Aviva Life & Pensions UK Limited – With-Profit Sub-Fund 5

The assumed rate of tax relief for life business is 20% (2013: 20%) for consistency with the assumption used for investment returns. The expenses shown above are before the assumed rate of tax relief has been applied.

The ex-RSA investment expenses (before tax relief) are 0.17%.

The ex-NWL investment expenses (before tax relief) are 0.11%.

(7) Unit growth assumptions

Most policies can invest in both internal linked funds (in NPSF1) and unitised with-profit funds. Sterling reserves are calculated at a policy level and the calculation may apply the unit growth rate or the UWP guaranteed bonus rate depending on the product.

The expense inflation assumptions and unit growth rates used in the valuation are as follows:

Product codes	Assumption	31 Dec 2014	31 Dec 2013
All	Expense inflation	2.99%	3.38%
	UWP life		
515	Life unit growth rate	2.60%	3.70%
515	Pensions unit growth rate	3.30%	4.70%

(8) Future bonus rates

The future assumed bonus rates for UWP contracts in the valuation are the guaranteed bonus rates.

Product codes	Ex-RSA products	31 Dec 2014	31 Dec 2013
515	UWP life	3.92%	3.92%
525	UWP pensions	5.70%	5.70%

Product codes	Ex-NWL product	31 Dec 2014	31 Dec 2013
515	UWP life	2.25%	2.25%
525	UWP pensions	4.00%	4.00%

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer

Global business

Financial year ended

31 December 2014

(9) **Persistency assumptions**

The persistency assumptions used in the valuation are shown below. The value given is the average lapse/surrender rate for the policy years.

Aviva Life & Pensions UK Limited – With-Profit Sub-Fund 5

Product codes	Ex-NWL products	Average lapse/surrender rate for the policy years			
00000		1-5	6-10	11-15	16-20
515	UWP target cash endowment Surrender	N/A*	N/A*	6.00%	6.00%

* The surrender rates for policy year 1-5 and 6-10 are no longer applicable as those products closed to new business in 2000.

Surrender rates are not used for the valuation of ex-RSA linked life products.

The valuation will take the higher of the reserve assuming premiums continue and the reserve if the policy is made paid up.

For Unitised With-Profits contracts, the unit liabilities are taken as the greater of:

a) the bid value of the units

b) the prospective liability that would arise assuming the units increase in future at the guaranteed bonus rates (shown in the above table in 4(8)) and then discounted at the respective valuation discount rates

(10) Other basis items

There are no other material basis assumptions.

(11) Derivatives

No derivative assets are held within WPSF5.

(12) Changes to INSPRU valuation rules effective from 31 December 2006

There was no change to the valuation methodology at the valuation date arising from changes in INSPRU valuation rules effective 31 December 2006.

5. **Options and guarantees**

- (1) The fund does not have any business with Guaranteed Annuity Rate options.
- (2) There are no surrender value guarantees on any of the fund's products.

The Company can apply a market value adjustment to any encashment of unitised with-profit units for ex-RSA business. There are no guaranteed "MVA-free" withdrawals.

The Company guarantees not to apply a market value adjustment on death or maturity to encashment of unitised with-profits units for ex-NWL business.

In addition, there are guaranteed minimum bonus rates on some UWP contracts. To ensure this is adequately reserved for, the unit liabilities are taken as the greater of:

a) the bid value of the units;

b) the prospective liability that would arise assuming the units increase in future at the guaranteed bonus rates (shown in the above table) and then discounted at the respective valuation discount rates.

- (3) Ancillary options exist under certain classes of contract to extend the term of cover and/or increase the sum assured without underwriting. However, these are not of sufficient significance on the valuation mortality basis stated to require specific additional provision.
- (4) There are no other guarantees or options for which a reserve is needed.

Valuation report – IPRU (INS) Appendix 9.4 Name of insurer Aviva Life & Pensions UK Limited – With-Profit Sub-Fund 5 Global business 31 December 2014

6. Expense reserves

(1) Expense loadings are applied at policy level and the aggregate amount of expense loadings expected to arise during the 12 months from the valuation date is shown in section 6 (1) for Non-Profit Sub-Fund 1.

For unitised business, the reserves arise from charges made on the funds and other explicit allowances described in paragraph 4(6) above.

No expenses have been treated as non-attributable.

- (2) Not applicable.
- (3) There are no material expenses in WPSF5.
- (4) The fund is closed to new business.
- (5) There are no material expenses in WPSF5 and no additional expense reserves are deemed necessary.
- (6) Not applicable

7. Mismatching reserves

- (1) All of the mathematical reserves of WPSF5 are held to support liabilities payable in pounds sterling. All of these liabilities are supported by assets denominated in sterling.
- (2) No such grouping of liabilities has been needed.
- (3) The fund does not hold a reserve for currency mismatching.
- (4) The Company is a realistic-basis firm and no resilience capital requirement is required.
- (5) The Company is a realistic-basis firm and no resilience capital requirement is required.
- (6) The Company is a realistic-basis firm and no resilience capital requirement is required.
- (7) No other reserves have been set up in relation to asset-liability mismatching.

8. Other special reserves

There are no such reserves that exceed the lesser of £10m and 0.1% of total mathematical reserves.

In total, the reinsurance credit risk reserve exceeds £10m however the amount of this reserve allocated to WPSF5 is £127,065.

9. Reinsurance

- (1) WPSF5 does not cede any business on a facultative basis to a reinsurer who is not authorised to carry on insurance business in the United Kingdom.
- (2) There are no reinsurance arrangements that satisfy the conditions in any of 9.2 (a), (b) and (c).

10. Reversionary (annual, regular) bonus

WPSF5 does not have sufficient with-profits liabilities to require disclosure for section 10.

The unitised with-profit unit funds are fully reinsured to Scottish Equitable plc, Scottish Widows plc or Clerical Medical Investment Group, depending on product. The policies in WPSF5 do not have participation rights over any surpluses arising within WPSF5.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – New/Old/Stakeholder With-Profits Sub-FundsGlobal business31 December 2014

1. Introduction

- (1) The valuation date is 31 December 2014.
- (2) The previous valuation was completed with an effective date of 31 December 2013.
- (3) An interim valuation was carried out with an effective date of 30 June 2014 for the purposes of rule 9.3A.

2. Product Range

On 1 May 2014, business written in the Non Profit Sub Funds (RIEESA account) since October 2009, excluding incremental business on policies which commenced before that date, was transferred to New With-Profits Sub Fund. Other than Income Protection and incremental new business, all other non profit new business is now written in New With-Profits Sub Fund.

The significant changes to products during the financial year were as follows:

Bonds and Individual Pensions: No products have been launched or withdrawn in 2014. There have been no changes to options, guarantees, brand names or charging methods for existing business. At the start of 2014 we closed the 5, 6 and 7 year WP Guarantee Funds and replaced these with funds with guarantees at 8, 9 and 10 years. All guarantees were money-back at the guarantee point.

Group Pensions: A significant change occurred within Group Personal Pensions following the Department of Work and Pensions announcement on policy charges in March 2014. The changes below are applicable from November 2014:

- Annual Management Charges have been reduced to no more than 0.75% for auto-enrolment schemes.
- 'Active member Discount' differential charges have been removed.
- Initial commission on schemes has been removed.
- An Employer Pension Charge (EPC) has been introduced where the charge cap has a adverse impact on profitability. This is levied on the employer directly.

Individual annuities: The allowable policy durations for Fixed Term Retirement Plans increased to cover terms of between 3 and 25 years (previously only terms of between 5 and 10 years were allowed).

Protection:

- Run down rates on Mortgage Life Insurance changed from 8% to 6%
- A new product launched offering limited underwriting to selected Post Office customers
- Enhanced definition of Heart Attack on Term and Mortgage Life Insurance contracts
- Launched a simplified protection product to Barclays customers
- Increased the sum insured to £15,000 on Tesco Free parent cover for applications via "Tesco Loves Baby"
- Increased the eligible age for Post Office Free Parent Cover to age 5
- Some products sold through our bank partners were closed to new business

The funds are open to new with-profits business.

3. Discretionary charges and benefits

(1) The tables below shows the period during which a market value reduction (MVR) applied during 2014. The table is separated by class of business and by year of unit purchase. Only entry years where MVRs applied are shown. For all other entry years, no MVR applied.

Note that the shaded areas mean that no business was sold in those years for the specific product.

Swedish business:

MVRs used are the same as for ex-CGNU implicitly charged pensions.

- (2) For non-profit business transferred to New With-Profit Sub-Fund (NWPSF) from 1 May 2014, details on the charges to premiums on reviewable protection policies are shown in the Non-Profit (NP) Sub-Fund's Appendix 9.4.
- (3) The fund does not have any non-profit deposit administration benefits.
- (4) Service charge increases:

Aviva, ex-NU Life products (post 2 October 2000), ex-CGU products, ex-CU Sterling Pensions and ex-CU Prime Series

The monthly administration charge increase is linked to inflation of +2.6%, except for Irish products where there was a charge increase linked to inflation of +2.8%.

Ex-GA products

The monthly administration charge increased by 0.5% on Life and Pensions products.

Ex-CU products

Valuation report – IPRU (INS) Appendix 9.4

 Name of insurer
 Aviva Life & Pensions UK Ltd – New/Old/Stakeholder With-Profits Sub-Funds

 Global business
 Signal State

Financial year ended 31 December 2014

Sterling Group Plan: The increase applied was 0.5%.

Prime Personal Pension: No changes to Plan fees.

Life Products: No changes to Plan fees.

- (5) There have been no changes to benefit charges on linked policies, other than the changes mentioned in section 2.
- (6) There have been no changes to unit management charges or notional charges to accumulating with profits policies.
- (7) Units are at the most recently available price.

Where an instruction, payment and all our requirements are received for a transaction before 8:00am on a business day, then units are allocated at the unit price. Where the instruction, payment and all our requirements are received after 8:00am then units are allocated at the next available unit price.

(8) When a capital gain is realised on the sale of an asset in a unit-linked fund, and this gain cannot be offset by past capital losses, then the capital gains tax due would be retained in the fund until the next periodic settlement of tax due.

This applies in respect of tax on notional realisations under the Finance acts as well as tax on realised capital gains. The tax rates used in calculating these deductions are as specified in section 3.9 below.

(9) The internal linked funds are taxed on investment gains at a rate which reflects the position of each fund when considered as a standalone entity but with some regard to the corporate tax position. Rates are reviewed frequently to ensure that they reflect both changes within the fund and changing market conditions. In the calculation of unit prices allowance is made for indexation where applicable and also for the expected timing of the policyholder tax payment.

The tax rate applied to realised gains varied by fund in the range 1.4% to 20% during 2014. The rate applied to unrealised gains varied by fund in the range 9.0% to 20% during the year to 31 December 2014.

Credit is given within unit prices for the tax benefit that may arise in future from realised and unrealised losses. For funds with an excess of realised/unrealised losses over gains the rate applied to the losses varied by fund in the range 0.9% to 20% during the year to 31 December 2014.

(10) The Company derives no financial benefit in respect of collective investment fund units held by the internal linked funds. The Company's policy on receiving discount, commission or other allowance when purchasing, selling or holding units in collective investment funds is to pass the full benefit onto the fund.

4. Valuation basis (other than for special reserves)

For unit linked policies, details are shown in the Non-Profit (NP) Sub-Fund's Appendix 9.4 unless stated below.

For non-profit business transferred to New With-Profit Sub-Fund (NWPSF) from 1 May 2014, details are shown in the Non-Profit (NP) Sub-Fund's Appendix 9.4 unless stated below.

(1) Valuation methodology

 \pounds 10m is less than 1% of gross mathematical reserves, therefore \pounds 10m has been used as the materiality limit for this section.

A gross premium valuation method has been used in the calculation of mathematical reserves for the principal classes of with-profit and non-profit business. Exceptions and principles adopted in the valuation of particular contracts are:

Ex-CGNU business

Except in the case of Parent's Life Policies, those contracts which are a combination of two or more categories of contract have been valued in their constituent parts.

Valuation report – IPRU (INS) Appendix 9.4

 Name of insurer
 Aviva Life & Pensions UK Ltd – New/Old/Stakeholder With-Profits Sub-Funds

 Global business
 Signal State

Financial year ended 31 December 2014

Full provision has been made for all guaranteed benefits, vested bonus and options available to policyholders. Where policyholders are able to surrender their policies for cash we have ensured that the reserves are large enough to meet that part of the cash payment relating to their guaranteed benefits.

A small number of policies are valued on a net premium basis; the reserves do not exceed £10m. Where the net premium method was used, no adjustment was made to the net premium for acquisition expenses (or for anything else).

An amount was included in the Decreasing Term Reserve to cover the risk of death during a period not exceeding three months under certain mortgage related policies between the date of exchange of contracts and the completion of a mortgage.

An amount was included in the With Profits Endowment Reserve to meet the non-recovery of Life Assurance Premium Relief agreed with the Inland Revenue in respect of future premiums on certain life policies issued in March 1984.

Provision is made for future expenses on the basis of the charges made to the Company under the Management Services Agreement with Aviva Life Services UK Ltd assuming future inflation at 2.99% per annum.

Principles adopted in the valuation of particular contracts were:

- (a) The reserve for single premium group and individual term assurance contracts was the single premium and for Group Decreasing Term Assurance contracts the reserve was one year's office premium for annual premium contracts and the unearned proportion of the premium on the 24ths basis for single premium contracts, plus an appropriate reserve for profit sharing.
- (b) Retirement Annuities by recurring single premiums were valued using a prospective bonus reserve valuation. The valuation assumes that future regular bonuses are nil. Allowance is made for the excess, if any, of the value of benefits purchased by future premiums at the current level over the value of such premiums.
- (c) Equity Endowment Assurances were valued by taking the Bid Prices of the Units deemed to have been purchased at the valuation date and adding 1/12 of the total annual premium payable.
- (d) For contracts with benefits linked to the internal linked funds of the Company, the unit liability was taken as the value of units deemed allocated to the policies in the internal linked funds of those companies.
- (e) Unitised With Profit business is valued initially by determining the lower of:
 - (i) the current non-guaranteed surrender value and
 - (ii) the amount of this benefit after removal of final bonus/MVR.

This result is then compared with a prospective valuation and the higher result taken.

The prospective valuation projects future benefits assuming future premiums cease and future bonuses are zero, except for policies with a guaranteed minimum bonus rate, where this guaranteed bonus is allowed for.

An allowance is made for future non-guaranteed surrenders. At a date (or dates in the case of regular withdrawals) where the company guarantees not to apply a Market Value Reduction on surrender, an exit rate of 100% is assumed. This is because the company now allows a 'roll-forward' of the no-MVR amount after the first no-MVR date. This approach is prudent.

Additional reserves are included where appropriate for contracts which provide a money back guarantee on a future policy anniversary.

(f) Assurances issued on impaired lives and subject to extra premiums were valued as if effected at the ages corresponding to the premiums charged, except that for certain assurances issued before 9 November 1970 one full year's extra premium was reserved in addition to the normal reserve calculated on the basis of the true age.

One full year's extra premium was reserved in addition to the normal reserve under assurances carrying an extra premium for any other reason.

Debts that have been imposed on assurances have been ignored.

(g) Amounts in overseas currencies were converted to sterling using rates of exchange current at the valuation date.

(h) The reserve for the Irish and German term assurance contracts was taken as one year's premium.

(i) The reserve for waiver of premium benefits attaching to endowment assurance, term assurance and decreasing term assurance contracts has been taken as one year's premium.

Ex-CULAC business

All conventional regular premium business is valued on a gross premium basis with the following exceptions:

- For direct written regular premium Mortgage Protection assurances, the reserve is taken to be 4.6 times the annualised premium.
- For group life contracts the reserve is taken to be 100% of the office yearly premium.
- For contingent assurances the reserve is taken to be the single premium paid or three times the annual premium.
- For assurances against issue risks, the reserve is taken to be the one times the annual premium and the total is less than £10m.

For policies on substandard lives, the difference between the premium payable and the normal premium has been treated as an extra premium for whole life assurances and endowment assurances issued on or after 1 January 1964 and a reserve is held equal to one year's extra premium.

- The reserve in respect of extra premiums charged for occupation or residence has been taken as one year's extra premium. This is less than £10m.
- The valuation factors for annuities in payment allow for certain guaranteed term conditions. The valuation factors for certain contracts where the annuitant was a substandard life at commencement allow for the shortened life expectancy.
- Deferred Annuities: the reserve is taken as the value of benefits secured by the annual or the single premiums payable prior to the policy anniversary following the valuation date. The benefit at the vesting date that is valued is the higher of the value of the annuity and the corresponding cash option, if one exists.
- For certain annuity contracts which return premiums with interest on death, pre-retirement mortality is ignored. Otherwise the value of any benefit payable on death during the deferred period is added to the value of the annuities.
- The reserve for deferred annuities which have passed the vesting date, and for which the Company accumulates the cash option at a rate of interest different from the valuation rate, is calculated by accumulating the benefit applicable at the vesting date at that rate of interest.
- An additional reserve is held in respect of premiums under "controlled funding" schemes which have not yet been applied to purchase benefits. This reserve is calculated by carrying out a notional allocation of the premiums using average ages and valuing the resulting benefits.

Unitised with-profit business:

Unitised with-profit business is valued initially by determining the lower of the current non-guaranteed surrender value and the bid value of units (after allowing for contractual surrender charges where applicable). This result is then compared with a prospective valuation and the higher result taken.

The prospective valuation projects future benefits assuming future premiums cease and future bonuses are zero, except for policies with a guaranteed minimum bonus rate, where this guaranteed bonus is allowed for.

Provision is made for future expenses on the basis of the charges made to the Company under the Management Services Agreement with Aviva Life Services UK Ltd assuming future inflation at 2.99% per annum.

In the case of the Group Defined Benefit contract, additional reserves are held for the guaranteed annuity options associated with internal transfers from the Group Deferred Annuity contract.

Valuation report – IPRU (INS) Appendix 9.4

 Name of insurer
 Aviva Life & Pensions UK Ltd – New/Old/Stakeholder With-Profits Sub-Funds

 Global business
 Financial year ended
 31 December 2014

Internal linked contracts

For linked contracts the reserve is the sum of the unit liability and a sterling reserve. The unit liability is the value of the units allocated to contracts using the fund price. A gross premium cash flow method was applied to individual policy clusters to investigate the requirement for sterling reserves for linked contracts. A minimum sterling reserve, equal to the level of claims expenses less any surrender penalty, is held for each cluster.

Other linked contracts

For the Abbey National Plan the reserve is an estimate of the total accumulated investment at the valuation date, together with an additional reserve for expenses.

For index linked immediate and reversionary annuities the reserve is calculated by discounting the annuities payable, allowing for interest, mortality, expenses, and growth in the Retail Prices Index.

Additional reserves are held to cover future anticipated expenses in excess of the allowances included in the reserves held for individual contracts.

(2) Valuation interest rates:

A table of all valuation interest rates used is given below.

Product Group	31 December 2014	31 December 2013
Life Assurances		
All Conventional With-Profit business	2.70%	3.30%
All Conventional Non-Profit business	1.05%	1.60%
All Unitised With Profit business	1.15%	1.40%
Pensions and General Annuities		
Immediate Annuities (currently in payment)	1.75%	3.10%
With-Profit Deferred Annuity		
In payment	2.70%	3.65%
In deferment	2.70%	3.65%
Non-Profit Deferred Annuity		
In payment	1.05%	2.10%
In deferment	1.05%	2.10%
Pure Endowment WP	2.70%	3.65%
In-payment rate for valuing Guaranteed Annuity Options	2.70%	3.65%
Other Non-Profit Conventional business	1.05%	2.10%
All Unitised With-Profit business	1.35%	1.65%
With Profit Annuity	3.20%	3.85%

For non-profit business transferred to New With-Profit Sub-Fund (NWPSF) from 1 May 2014, the above valuation interest rates will be used rather than those shown in the Non-Profit (NP) Sub-Fund's Appendix 9.4.

(3) Risk adjusted yield

Equity assets

The allowance for credit risk on equities is two-fold. Firstly, a deduction is applied, which is determined as 25% of the excess of the equity yield over the Long Term Gilt Yield. The equity yield is then capped at a maximum of 10%.

For the purposes of the valuation the average deduction from the yield on equities held at 31 December 2014 was:

Deduction from Yield	NWPSF	OWPSF
Impact of 25% Spread	0.27%	0.27%
Impact of 10% Cap	0.10%	0.11%
Total Deduction	0.37%	0.38%

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – New/Old/Stakeholder With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

Property assets

The property assets have been ordered by yield and divided into different categories. Firstly, a deduction is applied to the grouped yields, which is determined as 25% of the excess of the yield over the Long Term Gilt Yield. The property yield in each category is then capped at a maximum of 10%. This means that very low-yielding assets retain the low rate but high-yielding assets are capped.

For the purposes of the valuation the average deduction from the yield on property assets held at 31 December 2014 was:

Deduction from Yield	NWPSF	OWPSF
Impact of 25% Spread	0.65%	0.65%
Impact of 10% Cap	0.08%	0.08%
Total Deduction	0.73%	0.73%

Fixed interest securities

The allowance for credit risk on bonds is two-fold. For 31 December 2014, a deduction equivalent to 51% of the spread over gilts where the spread has been calculated after capping the bond yield at a maximum of 200% of the yield on a representative iBoxx index.

For the purposes of the valuation the average deduction from the yield on fixed interest securities (excluding Approved fixed interest i.e. gilts and other bonds issued by approved UK and international public sector bodies) held at 31 December 2014 was:

Deduction from Yield	NWPSF	OWPSF
Impact of Cap	0.12%	0.08%
Impact of 51% Spread	0.78%	0.71%
Total Deduction	0.90%	0.79%

For Mortgages, a deduction of 1.90% was used, while for Deposits, the equivalent deduction was 0.10%.

For non-profit business transferred to New With-Profit Sub-Fund (NWPSF) from 1 May 2014, the above NWPSF credit risk yield deductions will be used rather than those shown in the Non-Profit (NP) Sub-Fund's Appendix 9.4.

(4) Mortality assumptions

The table below shows the mortality basis for business written by the fund.

Notes on tables:

- M tables apply to male lives, F tables to female lives.
- Smoker / Non-Smoker table used where smoker status data is available, otherwise Combined table used.
- <u>Annuitant mortality</u>: allowance has been made for future improvements to mortality. The base tables (% of PCXA00) are assumed to apply as at 31 December 2000; from that date improvements are expected. The allowance for improvements is as follows:

	31 December 2014	31 December 2013
Males	CMI_2013_M [1.75%], applicable from 2001 to 2013 CMI_2013_M[1.75%] plus 0.5% p.a., applicable from 2014	CMI_2012_M [1.75%], applicable from 2001 to 2012 CMI_2012_M[1.75%] plus 0.5% p.a., applicable from 2013
Females	CMI_2013_F [1.5%], applicable from 2001 to 2013 CMI_2013_F[1.5%] plus 0.5% p.a., applicable from 2014	CMI_2012_F [1.5%], applicable from 2001 to 2012 CMI_2012_F[1.5%] plus 0.5% p.a., applicable from 2013

• There are no products where the assurance mortality basis is expressed as 'modified table'.

Expectation of Life

The table below shows the required examples for expectation of life using the base mortality tables, percentage adjustments and improvement factors quoted above.

Allowance for future changes in mortality where not implicit in the basis:

There are no explicit reserves for alterations to mortality. All future changes are made to the tables used to calculate base mathematical reserves.

Allowance/reserve for:

- (a) any possible detrimental impact of significant changes in the incidence of disease on the mortality experience of the insurer;
- (b) developments in medical science on the mortality experience of the insurer:

Margins in the published mortality basis are sufficient to cover current estimates of the cost of future additional claims from AIDS, other than those arising out of the exercise of options, at a level corresponding to one third of the AIDS Working Party's Projection 6A with allowance for the continuance of mortality rates at peak rates. The additional AIDS reserves for options are £1.4m for New With-Profits Sub-Fund (NWPSF) and £0.2m for Old With-Profits Sub-Fund (OWPSF).

The remaining margins in the published mortality and morbidity bases are considered sufficient to provide for adverse deviations in experience arising from other causes. No additional reserves are therefore held.

(5) Morbidity assumptions

Ex-CGNU business

The Combined disability and mortality rates were used for Critical Illness attached to Term Assurance, Mortgage Protection are detailed in the table in 4(4) above.

Ex-CULAC business

For Stand Alone Critical Illness, morbidity experience is assumed to be according to the IC94 table of decrement rates published by the Society of Actuaries in Ireland Working Party 1994. The tabulated rate is increased by 3.5%, and a further deterioration rate of 1.5% per annum of policy term is then applied. The following rates are an example of the adjusted morbidity rates used per mille for a 25 year policy at inception.

Age	Male	Female
25	0.451	0.776
35	1.279	1.772
45	4.111	4.013
55	9.556	7.777

These rates were also used in the previous financial year.

(6) **Expense assumptions:**

For ex-CGNU and ex-CULAC business, expense assumptions are taken as 120% of the amounts detailed in the Management Services Agreement (MSA). These loadings are used to set a long-term assumption for additional costs arising within the business (e.g. project costs, regulatory fees, audit fees) and to give a margin for adverse deviation. Expenses for unit-linked products and for non profit business transferred to NWPSF are detailed in Appendix 9.4 for non profit funds.

Expense levels are assumed the same for premium-paying and paid-up policies.

The table below shows the per-policy expenses for 2013 and 2014 (including loadings) for ex-CGNU and ex-CULAC business. Expenses for non profit business transferred to NWPSF are detailed in Appendix 9.4 for non profit funds.

UWP group single premium pension	535	76.86	74.84

On deferred annuities an additional 3% (ex-CGNU) and 5.4% (ex-CULAC) is included in expenses as an allowance for the cost of paying annuities.

Assumed future expense inflation:

2.99% per annum (RPI, as set by the MSA agreement)

Zillmer adjustments:

No Zillmer adjustments were made to net premium reserves.

Investment expenses:

The yield on the asset classes backing the liabilities was reduced for investment expenses. This reduced the upper bound on the interest rates used in the valuation. The adjustment made was 0.165%.

The adjustments reflect the charging structure agreed with our fund managers, Aviva Investors UK.

Tax relief

Tax relief on expenses on BLAGAB business has been assumed using a rate of 20.00%.

No allowance has been made for tax relief in respect of GRB (Gross Roll Up) business.

(7) Unit Linked policies: basis for non-unit reserves.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – New/Old/Stakeholder With-Profits Sub-FundsGlobal business31 December 2014

Assumed future expense inflation:

2.99% per annum (RPI, as set by the MSA agreement)

(8) Bonus Assumptions:

Conventional with-profit business:

The Company is a realistic basis life firm. Accordingly, no allowance has been made for future annual or final bonus on Conventional with-profit business. This is consistent with INSPRU1.2.31G. There are no guarantees relating to future annual or final bonus on this business.

Unitised with-profit business:

Certain classes of business have guaranteed annual bonus rates. These have been used in the projection of liabilities. No allowance has been made for discretionary annual bonus or final bonus.

Guaranteed regular bonus by product:

Ex-CGNU business

Product	Guaranteed Annual Bonus Rate	Valuation assumption	Applies to
Unitised with-profit Life:	·		
Investment Bond: Guaranteed Bonus	3.00%	3.00%	Units purchased pre 1/2/1994 AND NOT switched to the Loyalty Fund
Investment Bond: Loyalty Bonus	Guaranteed 0.5% addition to AB rate for normal (non- gteed) Investment Bond	0.5%	Units purchased pre 1/2/1994 and switched to the Loyalty Fund
Unitised with-profit Pensions	:		
Pensions (Non-Stakeholder)	4.00%	4.00%	Units purchased prior to 22/1/1996 (13/5/1996 for existing business regular premiums)

Ex-CULAC business

Product	Guaranteed Annual Bonus Rate	Valuation assumption	Applies to
Unitised with-profit Pensions:	1		
Pensions implicit	4.00%	4.00%	Units purchased prior to 1/1/1993 with implicit annual management charge
Pensions explicit	5.00%	5.00%	Units purchased prior to 1/1/1993 with explicit annual management charge

(9) **Persistency assumptions:**

For Conventional Business, we have assumed 100% persistency until maturity.

For Unitised business, we have allowed for surrender rates consistent with the table below.

For policies with a no-MVR option available, we have assumed an exit rate of 100% at the next no-MVR date. This is a prudent approach that reflects our policy of limiting future MVR on policies that stay in force after their first no-MVR date.

The persistency rates used are as follows. They apply to amounts remaining after policyholders with guaranteed benefits have taken their money (either in regular withdrawals or through a full surrender guarantee). Persistency rates for unit-linked products are detailed in Appendix 9.4 for non profit funds.

(10) Other basis items:

Option Take-Up Rates

Guaranteed Annuity Rate Options:

We have assumed that current option take-up is 93% for ex-CGNU business and 93% for ex-CULAC business. These include a margin over current experience of 10%.

These rates are assumed to increase by 1% per annum to 95%.

Guaranteed Cash Options:

For deferred annuities with a guaranteed cash option, we assume that 100% retain the annuity.

Guaranteed Minimum Pensions on Section 32 policies:

We have assumed 100% 'option take-up' of the minimum pension. In practice, policyholders would not receive an option (if the maximum pension bought by their policy is below the Guaranteed Minimum then they will be paid the GMP).

Taxation

Valuation interest rates on Life business include an allowance for taxation. This allowance has been arrived at using the following assumption:

Valuation report – IPRU (INS) Appendix 9.4

 Name of insurer
 Aviva Life & Pensions UK Ltd – New/Old/Stakeholder With-Profits Sub-Funds

 Global business
 Signal State Stat

Financial year ended 31 December 2014

• A tax rate of 20% has been assumed in respect of income on Fixed Interest and Property assets (for Life business). No allowance has been made for taxation on equity income.

No allowance has been made for taxation in respect of Pensions business.

- (11) We allow for Equity and Fixed Interest Futures in the matching assets used to hypothecate against reserves.
- (12) During the reporting period, the fund has made no changes to valuation methodology in respect of the following changes in INSPRU valuation rules:
 - (a) Allowance for lapses on valuation of protection business
 - (b) Allowance for negative reserves on valuation of protection business
 - (c) Allowance for lapses on valuation of unit-linked business
 - (d) Allowance for attributable expenses on valuation of unit-linked business

5. Options and Guarantees

(1) Guaranteed Annuity Rate Options:

(a) Method:

For policies with a cash benefit that can be used to buy an annuity on guaranteed terms, the methodology is as follows:

- Calculate the amount of the cash benefit that we have assumed will be converted into an annuity (using the option take-up rates given in section 4(10)).
- Determine the amount of annuity that this cash would buy if it were to be converted on guaranteed terms.
- Calculate the present value of the resulting annuity using the annuitant mortality basis given in section 4(4) and in-payment interest rate basis given in 4(2).
- If the total is greater than the total policy benefit at retirement then add on the difference. Discount the result to valuation date at the discount rate given in section 4(2).
- Add on the reserve for the expenses of administering the annuity.

The Regulatory-peak reserve for Guaranteed Annuity Options is compared with the reserve calculated using the following basis:

- Regulatory-peak annuitant mortality assumptions are used (as given in 4(4))
- Regulatory-peak option take-up rates are used (as given in 4(10))
- Regulatory-peak annuity interest rates and discounting are used
- Realistic-peak assumptions for persistency are used
- Realistic-peak Final Bonus allowance removed

Realistic-peak assumptions are discussed in more detail in Appendix 9.4A.

If this second reserve is larger than the base Regulatory-peak figure, an allowance for stochastic variation is added to the Regulatory-peak reserve. The allowance at 31 December 2014 is zero.

(vi) Increments allowed?	Same as NWPSF	Same as NWPSF	Same as NWPSF
(vii) Form of the annuity	Same as NWPSF	Same as NWPSF	Same as NWPSF
(viii) Retirement Ages	60 until 75	60 until 75	60 until 75

(2) Guaranteed surrender and unit-linked maturity values:

Non-unit-linked:

The only such policies with a guaranteed surrender value are certain Unitised with-profit Life contracts. No Conventional policies have a guaranteed surrender value.

Unitised with-profit Pensions contracts cannot be surrendered, only transferred or switched; in either case, an MVR could apply if this were to be done before normal retirement rate. Retirement under such policies can happen on more than one date without incurring an MVR. Retirement is a contractual exit (not a surrender of the policy) and is explicitly valued.

There are four types of guaranteed surrender value:

- The option to surrender the policy on a certain set of dates without an MVR being applied (a no-MVR guarantee).
- The option to surrender the policy on a certain set of dates with the total benefit being underpinned by the total premium paid into the policy (a money-back guarantee)
- The option to surrender the policy on a certain set of dates with the total benefit being underpinned by the total premium paid into the policy, plus inflation (an inflation-protected guarantee)
- The option to take a certain level of regular withdrawals without an MVR being applied.

(a) Methodology:

In all four cases above the overall reserve for a policy has been calculated as:

Max([Accumulated Benefit + adjustment], [Prospective reserve for future benefit]).

- The [Accumulated Benefit + adjustment] item is calculated in accordance with INSPRU 1.2.71R(1).
- The [Prospective reserve for future benefit] is calculated as the present value of the benefit paid to the policyholder after allowing for lapses. The basis of the calculation includes assumptions for surrender before the guarantee date(s), an assumption about the percentage of remaining policyholders who choose to surrender on their guarantee date(s) and an assumption for the level of MVR-free regular withdrawals taken by policyholders.

Persistency assumptions are given in item 4(9), along with assumptions about guarantee take-up. The interest rates used in the calculation are given in 4(2).

The guarantee is explicitly valued as part of the main calculation - there is no explicit reserve for it.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Ltd – New/Old/Stakeholder With-Profits Sub-FundsGlobal business31 December 2014

The tables show the unit value in force as the guaranteed amount. This represents the amount that would be paid if the policyholder surrendered with a no-MVR guarantee. It is also a proxy for the amount payable under the regular withdrawal guarantee, as a policyholder could ultimately redeem all of their units through regular withdrawals.

Where a spread of duration is shown, duration refers to the next date at which the policyholder could fully surrender with a guarantee (either no-MVR or money-back).

Aviva Life & Pensions UK Ltd – New/Old/Stakeholder With-Profits Sub-Funds

French UWP business does not have a guarantee on surrender.

German UWP business: the reserve for the business has been taken as the face value of units. Although there is a guaranteed bonus of 3% (see section 10(1) for details), this is less than the valuation interest rate for the business (ensuring that using the face value of units is prudent). The guarantee reserve is therefore zero.

Unit-linked:

Guaranteed Fund shortfall reserve:

The below section refers to the non profit business transferred to NWPSF.

Methodology:

The reserves are calculated as the best estimate, plus 33.5% of the excess of the cost that is modelled to arise under the 99th percentile investment over the best estimate. Investment returns are projected using a logNormal model for risky assets. Dynamic switching between asset classes is assumed over time, as such action is prescribed for the management of the assets in this fund.

(a)

- (i) Product names: 'Life property linked single premium' (code 700) and 'Trustee investment plan' (code 755).
- (ii) The base reserve for these products is £1,470m
- (iii) Spread of outstanding durations:

Year	Proportion with Guarantee
2015	50.0%
2016	32.0%
2017	11.0%
2018	4.0%
2019	3.0%

(iv) The Guarantee reserves are £5.8m.

 Global business
 Signal State Stat

Financial year ended

31 December 2014

- (v) The Guaranteed amount totals £1,210m
- (vi) MVA free conditions: N/A
- (vii) The business is single premium only so there are no in-force premiums expected.

(viii) Increments – the guarantee does not apply to switches into the fund.

<u>Ex-CGNU</u>

No reserve is necessary.

Ex-CULAC:

No reserve is necessary for the investment performance guarantees either in the internal linked Life Cash Fund, Pension Secure Growth Fund, and Pension Safety Net since the nature of assets held is such as to provide the investment guarantee.

(3) Guaranteed Insurability Options

(a) <u>Ex-CGNU</u>: A reserve for options was included to provide for options which grant additional or extension assurances without medical evidence in addition to reserves of various multiples of specific extra premiums charged. The valuation basis was chosen so as to make suitable allowance for other guarantees and options granted.

<u>Ex-CULAC</u>: For convertible term assurances the option premium is accumulated at 3.25% per annum compound for the average duration of in force policies to cover the conversion options.

<u>Non-profit business transferred to NWPSF</u>: One periodic option premium is held as a reserve for those policies which select conversion or renewal options, apart from ex-RSA/NWL business where options are not material.

For other individual assurances where guaranteed insurability options exist, the reserve taken is an appropriate accumulation of the option premium.

(b) The sum assured (net of reassurance ceded) under conversion and renewal options is under £1bn for ex-CGNU and ex-CULAC and is therefore not included here in accordance with rule 9.3(b).

The table below, together with the comments that follow, gives details for certain protection policies with conversion and renewal options in the non profit business transferred to NWPSF.

Product name	In-force premiums	Sum Assured	Guarantee Reserve
Level Term Assurance	£2.3m	£1,294.4m	£0.3m
Decreasing Term Assurance	£7.2m	£1,651.6m	£4.2m

Conversion option

Conversion options are included on certain policies. For an additional premium, and provided the option is selected prior to their 65th birthday, the policyholder can convert all or part of their policy without further medical evidence. If the policy is a level term assurance then it can be converted into either a non-increasing term type policy or a low cost whole of life. If the policy is a decreasing term assurance it may also be converted into an endowment assurance. In either case the maximum sum insured will be the original sum insured inflated using RPI to the conversion date.

Renewal option

Renewal options are included on certain policies. For an additional premium, and provided the term of the policy expires before the policyholder's 65th birthday (if a level term assurance) or 75th birthday (if a decreasing term assurance), the policyholder may effect a new policy at the end of the policy term. The term of the new policy must not exceed the term of the original policy. No further medical evidence is required on selecting this option, unless a critical illness or premium protected option is selected on the new policy. The maximum sum insured will be the original sum insured inflated using RPI to the conversion date.

(4) Other guarantees and options

(a) Guaranteed Minimum Pension:

For some Unitised business (both with-profit and unit-linked), there is a guarantee that the pension bought with the benefits will not be less than the Guaranteed Minimum Pension arising from being contracted-out of the second state pension.

A reserve has been calculated on an individual level for a subset of affected policies. For each policy, the value of the Guaranteed Minimum Pension at retirement (calculated using the end-2014 valuation basis) was compared with the projected value of the policy's benefits. The difference, if positive, was noted as a percentage of the policy's benefits. These percentages were weighted and applied to the total benefit in force to estimate the reserve required on the business as a whole. An additional 10% margin was added to cover the risk arising from data quality.

The amount of business invested in products that may incorporate a Guaranteed Minimum Pension guarantee is \pounds 80.2m for NWPSF and \pounds 9.5m for OWPSF. The reserves for the guarantee are \pounds 48.9m in NWPSF and \pounds 6.0m in OWPSF.

(b) Guaranteed annuity under Unitised with-profit Red Plan contracts

An initiative transferred Group Defined Benefit business from the Conventional Deferred Annuity Red Plan contract to Unitised With-Profits Pensions policies. As part of the transfer, the Company agreed to guarantee to provide an amount of annuity at retirement for each member. The members were allowed to convert this annuity to cash on guaranteed terms and these guaranteed terms were used to determine the amount of money used to buy units in the Unitised With-Profits fund. Excess returns on the UWP policies, together with future contributions, would be used to purchase additional annuity for the scheme members.

The benefit payable by the Company on the retirement of a member is:

(Market value of annuity amount) +

max[UWP fund value - min{Market value of annuity, Gteed value of annuity},0].

Under the deterministic model used in the Regulatory-peak valuation,

- i) Market value of annuity > Guaranteed value of annuity in all cases
- ii) UWP fund value > Guaranteed value of annuity.

This means that the benefit payable becomes:

(Market value of annuity amount) – (Guaranteed value of annuity) + UWP benefit.

Please note that the liability is not a Guaranteed Annuity Option on the UWP benefit (as defined by section 5(1)). Instead, it is a deferred annuity added to a call option on the UWP fund value. A Guaranteed Annuity Option could be expressed using a similar formula but the annuity being valued would vary in line with the UWP benefit (whereas the annuity in this case is fixed).

We have reserved for this by discounting the difference in annuity value and adding it to the current face value of units. This is expected to be a sizeable overstatement of the amount required. It is certainly expected to cover whatever small margin may be needed to allow for stochastic variation in annuity interest rates.

Members do not have to take their annuity amount in this form – they can choose to convert it to cash on the guaranteed terms mentioned. We have assumed that members will choose to convert 5% of their benefit. This is the equivalent of 95% option take-up in a Guaranteed Annuity Option calculation.

Basis:

The market value of the annuity has been valued using the same annuity interest rates/discount rates/ mortality as for Guaranteed Annuity Option calculations (figures given in section 4(2) and 4(4)).

Base reserve = Face Value of units = £134.3m for NWPSF and £3.5m for OWPSF

Reserve for the guarantee = £87.2m for NWPSF and £5.0m for OWPSF.

Unitised employer sponsored pension	-	9,372	10,404	20,961	40,737
All expenses attributable	(76)	22,794	51,015	-	73,733
Total	114	37,641	65,113	19,613	122,481

OWPSF:

Homogeneous risk group	Implicit allowances	Explicit allowances (investment)	Explicit allowances (other)	Non- attributable expenses	Total
	£'000	£'000	£'000	£'000	£'000
Unit-Linked business (not 100% reinsured out)	25	-	167	-	192
All expenses attributable	-	3,443	6,742	-	10,185
Total	25	3,443	6,909	-	10,377

- (2) The implicit allowance has been calculated as the surplus expected to emerge in 2015 on the valuation basis. This emerges due to the constraint that sterling reserves cannot be negative.
- (3) The 2014 figure for expenses in line 14 of Form 43 includes amounts for prior year adjustments, one-off items and exceptional expenses that are reserved for explicitly elsewhere. Excluding these items, the allowance for 2015 maintenance expenses in 6(1) above is higher than the adjusted Form 43 expense by £17.0m in NWPSF and £0.3m in OWPSF. For the business transferred to NWPSF, actual expenses in Form 43 only allow for expenses incurred since the date of the transfer.
- (4) In determining the requirement for a new business expense overrun reserve, a prudent assessment of the projected value of 2014 new business is calculated, and compared against the projected new business expense overrun. A reserve is held if the latter exceeds the former. No new business expense overrun reserve is required in respect of 2014 new business.
- (5) No explicit reserve for maintenance expense overrun has been made because existing provisions for expenses exceed their current levels.

INSPRU 1.2.50R(2) requires us to make prudent provision for expenses allowing for:

- (a) tax
- (b) expenses in the last twelve months and expected future expenses
- (c) impact of expense inflation

Valuation report – IPRU (INS) Appendix 9.4

 Statement of the second s

Financial year ended **31 December 2014**

(d) cost of closure to new business 12 months after valuation date.

We have taken the following action to comply with INSPRU 1.2.50R(2):

- (a) All expenses provisions allow for taxation.
- (b) Our expense provision exceeds expenses incurred over the last twelve months and expected future expenses levels.
- (c) Expense inflation has been allowed for in the valuation at the rates dictated by the Management Services Agreement. The parameter used for RPI inflation (2.99%) was a best-estimate. By using a best-estimate assumption we are incorporating a margin for prudence into the valuation of expenses (since the gap between the valuation discount rate and expense inflation is far smaller than bestestimate).
- (d) An assessment was made of the cost of closure of the Company to new business at the end of 2014 using the following method and basis of calculation:
 - All sales, marketing and new business administration operations were assumed to cease three months after the date of closure.
 - Allowance was made for statutory redundancy costs.
 - Allowance was made for costs arising from the delay in re-letting properties occupied by the new business areas.
 - Allowance was made for the additional cost that would be incurred through outsourcing existing business administration
 - Allowance was made for other costs incurred on closure to new business such as write-offs on fixed assets.

Allowance was made for the proportion of closure expenses that would be borne by the other subfunds of the Company and Aviva Annuity UK Limited.

No allowance was made for terminating the existing Management Services Agreement charging structure for existing business, as this would be expected to remain in force after closure to new business.

A provision of £62m in NWPSF (including non profit business transferred to NWPSF) and £1.2m in OWPSF is held to cover the cost of closure.

(6) For NWPSF and OWPSF, no reserve is necessary to meet the non-attributable expenses as these are covered by the future valuation surplus.

For unit linked business, the explicit expense reserve only covers expenses directly attributable to unit linked contracts. Non-attributable expenses are covered by future valuation surplus, and so the reserve for these expenses is zero.

7. Mismatching Reserves

(1) The mathematical reserves (other than reserves in respect of property linked benefits) and matching assets, analysed by currency, are as follows.

NWPSF (including non profit business transferred to NWPSF)

Currency	Mathematical Reserves (£000)	Matching Assets (£000)	Matched %
Sterling	15,475,375	14,300,264	92%
Euro	84,545	84,545	100%
Dollar	43,606	43,606	100%
Total	15,603,525	14,428,414	92%

Valuation report – IPRU (INS) Appendix 9.4

 Name of insurer
 Aviva Life & Pensions UK Ltd – New/Old/Stakeholder With-Profits Sub-Funds

 Global business
 31 December 2014

<u>OWPSF</u>

Currency	Mathematical Reserves (£000)	Matching Assets (£000)	Matched %
Sterling	2,338,494	2,302,341	98%
Euro	20,174	20,174	100%
Dollar	17,325	17,325	100%
Total	2,375,993	2,339,840	98%

- (2) No such grouping of liabilities has been needed.
- (3) The fund does not hold a reserve for currency mismatching.

The table in 7(1) above shows that the majority of our liabilities – both UK and overseas - are covered by assets held in the same currency and mismatching risk is not material.

- (4) The firm is a realistic-basis firm and a resilience capital requirement is no longer required.
- (5) The firm is a realistic-basis firm and a resilience capital requirement is no longer required.
- (6) The firm is a realistic-basis firm and a resilience capital requirement is no longer required.
- (7) INSPRU 1.1.34R(1): "The assets [held by a firm to cover its technical provisions]...must...be of a sufficient amount, and of an appropriate currency and term, to ensure that the cash inflows from those assets will meet the expected cash outflows from the firm's insurance liabilities as they become due."

No further reserve has arisen following consideration of this rule.

Currency mismatching is considered in sections 7(1)-7(3).

The assets backing the liabilities do not precisely match them by term. The fund has significant holdings in Equity and Property assets that have no set maturity date. These assets are held to provide strong performance for policyholders.

Instead, the fund aims to ensure that cash outflows can be met through:

- Incoming premiums
- Income from its assets (dividends, rental income, coupon payments)
- Receipts on redemption from matched fixed interest stocks
- Holding appropriate volumes of cash and liquid assets
- Sales of assets.

There is a risk that the fund may have to sell assets at an unfavourable time, e.g. when prices are temporarily depressed

To mitigate this risk the fund holds liquid assets (cash, certificates of deposit). It also ensures that a significant proportion of its other assets are invested in highly marketable stocks, in particular government bonds (but also shares issued by large companies).

An estimate of the Company's claims amounts for 2015 is £1,629m for NWPSF and £229m for OWPSF. Expected income, in 2015, from assets currently held in the NWPSF is £369m, £752m is held in depositstyle assets, £7,146m is held in approved fixed and variable interest securities and the expected premium income is £441m. For OWPSF, the respective figures are £72m investment income, £297m deposit style assets, £1,008m in approved fixed and variable interest securities and £38m expected premium income. Therefore we expect to be able to pay the company's claims from cash, incoming premiums and by selling these liquid assets at short notice without altering prices. Accordingly there is no need to hold an additional reserve.

8. Other Special Reserves

(1) Mortgage Endowment Promise

CGNU and CULAC announced its intention that payments on with profit mortgage endowment policies may, if necessary, be topped up at maturity (subject to certain conditions) where there is a shortfall between the claim value and the mortgage originally targeted.

Following the transfer and estate reattribution of the With-Profit funds of CGNU and CULAC, the scheme of transfer states that the top-up payments will be made even if the investment returns on the assets backing the free reserves of the relevant fund are not sufficient to cover them.

Maximum top-up amounts have been communicated to policyholders. We have also advised policyholders that even after the Promise payment has been made they may have a shortfall.

The reserve will be calculated by considering the full liability for payments advised to policyholders in Promise mailings.

The amounts of the provisions are £335.4m in NWPSF and £86.0m in OWPSF.

(2) Pensions Review Reserve

This is the reserve for the expected remaining compensation payments arising from the review of pensions mis-selling. The reserve includes expected future compensation costs arising under Phases 1 and 2 of the review, together with the expected future expenses of administering the review and the expected amount of future levies to be paid by each company to the FSCS, the PCU and PASS.

The methodology used to calculate expected future compensation costs follows the Guidance issued by GAD at the start of the review of pensions mis-selling and what is laid down in the Guarantee Agreements between the companies and the investors. A prudent approach has been taken.

Future levies and expenses are derived by analysing past experience and adjusting to allow for expected future experience. Again, a prudent approach has been taken.

The reserve held totals £10.7m (NWPSF £9.5m, OWPSF £1.2m).

(3) **Product Governance Provision**

A reserve has been made to provide for estimated future rectification costs arising from known product governance issues.

The amounts of the provisions are £53.8m in NWPSF and £5.0m in OWPSF.

(4) System migration costs

A provision of £19.5m in NWPSF and £3.1m in OWPSF is held to cover costs to be charged as a result of migration of policies onto a new policy administration system.

9. Reinsurance

The reinsurance for the business transferred from non-profit sub fund is listed in Appendix 9.4 of the non-profit sub-fund.

- (1) No premiums were payable during the report period for business ceded on a facultative basis to reinsurers who are not permitted to carry on business in the United Kingdom.
- (2) The section below responds for those treaties that satisfy 9.2(a), (b) or (c).
- (a) This item covers a group of similar treaties.
 - (d) Munich Reinsurance Company
 - (e) The treaties provide cover for ex-CGNU level term assurance, mortgage protection, decreasing term assurance attached to low cost whole life assurance and pensions term assurance for business issued on or before (and still in force as at) 30 September 2001 (on original terms). This

Valuation report – IPRU (INS) Appendix 9.4

Global business	
Financial year ended	31 December 2014

applies only to the portion that is not otherwise reinsured. Cover is also provided for ex-CGNU whole life and endowment assurances (where not covered by other specified treaties) on a risk premium basis and term assurances on original terms up to £3,500,000 (£5,000,000 for business written on or after 28 May 1999) above the Company's retention limit.

- (f) The premium payable by the Company during 2014 was £8,100,000.
- (g) There are no deposit-back arrangements.
- (h) The group of treaties is closed to new business.
- (i) There are no significant undischarged obligations to the reinsurers as at 31 December 2014.
- (j) The mathematical reserves ceded under the treaties total £32,500,000 for NWPSF and £4,000,000 for OWPSF.
- (k) N/A, see (h).
- (I) The reinsurer is authorised to carry on insurance business in the United Kingdom.
- (m) The Company is not connected with the reinsurer.
- (n) The treaties are not subject to any material contingencies.
- (o) No provision was made for refund of reinsurance commission in the event of lapse or surrender of the contracts.
- (p) The treaties are not financing arrangements.
- (b) This item covers a group of similar treaties.
 - (d) Swiss Re Life & Health Limited
 - (e) The treaty provides cover for ex-CGNU term assurances on original terms for up to £1,500,000 above the Company's retention limit and for term assurances with accelerated critical illness benefit on a risk premium basis up to £3,000,000 in excess of the Company's retention limit. From 2 October 2000 the treaty provides cover for term assurances with accelerated critical illness benefit on a risk premium basis for 50% in excess of the Company's retention limit up to £1,700,000.
 - (f) The premium payable by the Company during 2014 was £3,200,000.
 - (g) There are no deposit-back arrangements.
 - (h) The treaty is closed to new business.
 - (i) There are no significant undischarged obligations to the reinsurers as at 31 December 2014.
 - (j) The mathematical reserves ceded under the treaty total £20,300,000 for NWPSF and £2,700,000 for OWPSF.
 - (k) N/A, see (h).
 - (I) The reinsurer is authorised to carry on insurance business in the United Kingdom.
 - (m) The Company is not connected with the reinsurer.
 - (n) The treaty is not subject to any material contingencies.
 - (o) No provision was made for refund of reinsurance commission in the event of lapse or surrender of the contracts.
 - (p) The treaty is not a financing arrangement.

The regular bonus shown for 2014 for unitised business is that declared at the end of 2013 and applied to policies during 2014. The regular bonus shown for 2014 for conventional business is the rate declared at the end of 2014, which is added to policies in force at that date.

The reserves quoted are those required to meet the guaranteed policy benefits. Additional reserves required, such as the reserve for mortgage mis-selling, have not been allocated to a specific bonus class.

The reserves of New / Old With-Profits Sub-Funds include £12.3m for Conventional Life business from the Provident Mutual (PM) fund where policyholders redirected their investment. The bonus awarded for this business is shown in the Appendix 9.4 report for the PM sub-fund.

German business has a guarantee that the final payout will be at least as great as the payout the policyholder would have received if regular bonus had always been 3%. This is not the same as having a guaranteed regular bonus of 3%.

- (2) The figures for bonus awarded on Unitised with-profit business show the percentage increase in unit price during the year.
- (3) For super-compound business both rates are shown (the rate applying to the base benefit is shown as a percentage of SA, the rate applying to regular bonus awarded to date is shown as a percentage of RB).

We have not used averaging in the tables above.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Limited – Non-Profit Sub-funds
Global business	
Financial year ended	31 December 2014

1. Introduction

- (1) The valuation date is 31 December 2014.
- (2) The previous valuation was completed with an effective date of 31 December 2013.
- (3) An interim valuation was carried out with an effective date of 30 June 2014 for the purposes of Rule 9.3A.

2. Product Range

On 1st January 2014, new Annuity business written in Aviva Life and Pensions Ireland Limited was 100% reinsured in to the Non Profit Sub Funds.

On 1st May 2014, business written in the Non Profit Sub Funds since October 2009, excluding incremental business on policies which commenced before that date, was purchased by New With-Profits Sub Fund. Other than Income Protection and incremental new business, all other non profit new business is now written in New With-Profits Sub Fund.

The significant changes to products during the financial year were as follows:

A significant change occurred within Group Personal Pensions following the Department of Work and Pensions announcement on policy charges in March 2014. The changes below are applicable from November 2014:

- Annual Management Charges have been reduced to no more than 0.75% for auto-enrolment schemes.
- 'Active Member Discount' differential charges have been removed.
- Initial commission on schemes has been removed.

3. Discretionary charges and benefits

- (1) Details of any market value reductions have been included in the with-profits fund abstract.
- (2) During 2014, ex-RSA and ex-NWL level and decreasing term assurance policies with accelerated critical illness cover were not reviewed and premiums are unchanged.

For other business, which includes that transferred to New With Profits Sub fund in 2014, products with reviewable premium anniversaries in the year 2014 were split into two cohorts; pre and post 18th August.

For those review anniversaries prior to 18th August 2014;

There were nearly 17,100 policies with eligible review anniversaries. Approximately 12,350 of these were 'no change'. Of the remainder, the reviewable critical illness element (RCI) of the policyholder premium and/or the Mortgage Payment Protection (MPP) element were changed. For level sum assured products, the range of changes to the RCI element was (23.1)% to 17.3%.

For decreasing sum assured products, the range of changes to the RCI element was (25.1)% to 17.5%. The range of changes to MPP elements was (17.9)% to 2.9%.

For those review anniversaries post 17th August 2014;

There were nearly 10,500 policies with eligible review anniversaries. Approximately 7,500 of these were 'no change'. Of the remainder, the reviewable critical illness element (RCI) of the policyholder premium and/or the Mortgage Payment Protection (MPP) element were changed. For level sum assured products, the range of changes to the RCI element was (22.9)% to 12.1%. For decreasing sum assured products, the range of changes to the RCI element was (17.7)% to 9.4%. The range of changes to MPP elements was (18.6)% to 0.15%.

- (3) There are no non-profit deposit administrations in forms 51 to 54.
- (4) For ex-RSA and ex-NWL policies, service charges on all unit linked policies (deducted monthly via cancellation of units) were increased to reflect inflation in line with the National Average Earnings Index / Average Weekly Earnings Index over the same period. Increases were in the range 0.00% to 1.22% depending on policy type. For ex-RSA business, the cumulative increase in price since the policy was first written cannot exceed the cumulative increase in the index over the same period.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Limited – Non-Profit Sub-funds
Global business	
Financial year ended	31 December 2014

For other business, where service charges have been increased in 2014 on linked policies, the increases were no greater than the year on year increase in RPI, apart from Ireland products, where the increase was limited to the year on year increase in CPI.

- (5) There have been no changes to benefit charges on linked policies.
- (6) There were no changes to unit management charges or notional charges on accumulating with-profit policies.

(7) Allocation and creation of units

The Company operates one pool of assets for each internal linked fund, other than Property, where Life and Pension funds invest in the same pool, although taxation is applied separately. Managed funds invest through the internal linked funds to ensure assets are managed efficiently.

Asset units are created and cancelled at either the asset offer price or the asset bid price depending upon the prevailing basis of the fund and using the most recently available price. The pricing basis is set depending upon the short and medium term expectation of whether the associated internal linked fund will be in a net inflow or outflow position. This includes sales and purchases by Managed funds.

Where an instruction, payment and all our requirements are received for a transaction before 8:00am on a business day, then units are allocated at the unit price based upon market movements up to 11:00pm on the previous business day. Where the instruction, payment and all our requirements are received after 8:00am then units are allocated at the next available unit price. The Company reserves the right to defer any transaction to a subsequent valuation point.

For Pension Assured Funds, investment return is attributed through the issue of bonus units. Each month bonus units are allocated based on market movements up to 11:00pm on the last business day in the month. The offer unit price may increase during the month as new investments are not entitled to the bonus at the end of the first month. On contractual exits, units are de-allocated at the bid value of units, normally \pounds 1. On non-contractual exit payment may be subject to a Market Depreciation Discount.

For some very small closed funds, the valuation takes place on a weekly basis.

For Variable Annuity business (included in code 725 in Form 53), units in the internal linked funds are allocated or de-allocated (and simultaneously created or cancelled) as follows:

Accumulation Units

- (a) At least once a week the net value of Accumulation Units is determined by reference to the market value of the assets representing the Accumulation Account and the total number of units in force. For this purpose the market value of the assets is reduced to reflect the costs of asset realisation.
- (b) The gross value of Accumulation Units is also calculated as the net value increased by a bid/offer spread of 7%.
- (c) Premiums are carried to the Accumulation Account and applied (without any deduction) to purchase Accumulation Units using the current gross value of the unit.
- (d) The benefits are provided through the realisation of units, which takes place using the net value of the Accumulation Units. As appropriate, charges for management expenses are applied.
- (e) Unit transactions are based on the most recent valuation.

Annuity Units

- (a) At least once a week the value of Annuity Units is calculated. The value is such that, in the opinion of the Company's Chief Actuary, the market value of the assets representing the Annuity Account is sufficient to meet all the variable annuities included in the account throughout the remainder of their currency, together with associated expense deductions.
- (b) Units are allocated by converting the amount being transferred from the Accumulation Account into Annuity Units. The rate of conversion is such that the present value of the units allocated, on the same basis as used to calculate the current value of Annuity Units, is equal to the amount being transferred from the Accumulation Account.
- (c) Annuity Units are cancelled on the death of the annuitant.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Limited – Non-Profit Sub-funds
Global business	
Financial year ended	31 December 2014

- (d) Unit transactions are based on the most recent valuation.
- (8) When a capital gain is realised on the sale of an asset in a unit-linked fund, and this gain cannot be offset by past capital losses, then the capital gains tax due would be retained in the fund until the next periodic settlement of tax due.

This applies in respect of tax on notional realisations under the Finance acts as well as tax on realised capital gains. The tax rates used in calculating these deductions are as specified in section 3.9 below.

(9) The internal linked funds are taxed on investment gains at a rate which reflects the position of each fund when considered as a standalone entity but with some regard to the corporate tax position. Rates are reviewed frequently to ensure that they reflect both changes within the fund and changing market conditions. In the calculation of unit prices allowance is made for indexation where applicable and also for the expected timing of the policyholder tax payment.

The tax rate applied to realised gains varied by fund in the range 1.4% to 20% during 2014. The rate applied to unrealised gains varied by fund in the range 9.0% to 20% during the year to 31 December 2014.

Credit is given within unit prices for the tax benefit that may arise in future from realised and unrealised losses. For funds with an excess of realised/unrealised losses over gains the rate applied to the losses varied by fund in the range 0.9% to 20% during the year to 31 December 2014.

(10) Benefits from discounts, commission and other allowance

The Company derives no financial benefit in respect of collective investment fund units held by the internal linked funds. The Company's policy on receiving discount, commission or other allowance when purchasing, selling or holding units in collective investment funds is to pass the full benefit on to the fund.

4. Valuation basis (other than for special reserves)

Where either the gross mathematical reserves or the gross annual premiums for a group of products exceed $\pm 10m$, details of the method and basis for valuation are provided below.

(1) Valuation methods

Non-linked business

A gross premium valuation method has been used for most material types of conventional product. The present value of future premiums is deducted from the present value of the benefits and future expenses. For certain blocks of business, negative reserves arising on individual contracts are set to zero – there is no allowance for future policy lapses on these contracts. However, for a large block of protection business, negative reserves have been allowed and prudent lapse assumptions have been included. The lapse rates assumed are higher than expected for contracts where the reserve is negative and lower than expected where the reserve is positive.

For deferred annuity contracts where premiums are returned with interest on death, mortality in the deferred period is ignored. Otherwise the value of any benefit payable on death during the deferred period is added to the value of the annuity.

For deferred annuities continued beyond the normal pension age, the cash available at the normal pension age is accumulated with interest.

For group life contracts, the total reserve consists of an Unearned Premium reserve, an Outstanding Claims reserve (consisting of 'Incurred but not reported' and 'reported but not paid' reserves) and a Claims Equalisation reserve.

For the majority of Creditor business, the total reserve consists of an Unearned Premium reserve, an Outstanding Claims reserve, a Profit Commission Reserve and a Credit Risk reserve associated with liabilities that could arise from distributor default. Allowances for data quality and expenses are also made. For other Collective Life business, the reserve was calculated as one year's office premium for annual premium contracts, plus the unearned proportion, on a 24ths basis, of the single premiums paid plus a reserve for profit sharing.

Valuation report – IPRU (INS) Appendix 9.4 Name of insurer Aviva Life & Pensions UK Limited – Non-Profit Sub-funds Global business Financial year ended 31 December 2014

Reserves for the ex-Hamilton Life Assurance block of Creditor insurance business written prior to 31st October 2007 have been calculated based on audited reserves at that time, prudently adjusted for cashflows arising since acquisition. For ex-Hamilton Life Assurance business written since 1st November 2007, a similar method has been applied, allowing for written premiums less refunds and paid claims.

Individual Income Protection contracts have been valued using a gross premium valuation based on inception/annuity methodology. Contracts with waiver of premium were valued by treating the premium waiver as an extra benefit. The reserve for claims in payment is the discounted value of future claim payments. Any benefit escalation is explicitly allowed for. Claim expenses are valued explicitly during claim. An additional disputed claims reserve is held and a notified outstanding claims reserve is held in respect of claims reported but not yet authorised. Annually reviewable Income Protection contracts have been valued on an unexpired premium basis, plus claims reserve.

For other waiver of premium benefits, the reserve is taken as a multiple of the waiver premium. Where an extra premium has been charged for medical, occupational or residence reasons, an additional reserve of one times the yearly premium has generally been held.

For certain contracts which have fixed benefit increases the valuation provides for these increases within the gross premium valuation method.

Additional reserves are held to provide for future expenses not covered by the valuation method, including allowances for the potential cost of compensation payments. Further details are provided in sections 6 and 8.

For certain small blocks of business the net reserve was taken as the gross reserve. For a large block of business where policies are written under level or risk premium reassurance arrangements, the net reserve was calculated on the retained benefits and premium.

The valuation methodology for Reassurance Accepted from Aviva Annuity UK Limited is detailed in that company's valuation report.

Unit-linked business

Unit-linked business is valued as the face value of the units at market bid price, together with non-unit reserves for mortality and future expenses not supported by future margins within the individual contracts. Allowances are included where appropriate for loyalty bonus and for actuarial pre-funding of the periodic charge on capital units. Additional reserves are held for waiver of premium benefits, permanent health benefits, permanent total disability benefits, regular increase benefits and Guaranteed Insurability Options, and for the accrual of a periodic charge rebate on the Group Pension Investment Bond.

Non-unit reserves are calculated by projecting cashflows on a monthly basis for each month that the policy was expected to remain in force. Where the cashflow in any future month is found to be negative, the negative is offset where possible by positive cashflows in previous months. For any future month where this is not possible, then a positive sterling reserve is set up at the valuation date.

Non-unit reserves include explicit allowance for per policy expenses. Allowance has also been made for expenses which are not directly attributable to individual contracts, as described in section 6. For benefits linked to the Guaranteed Funds, future charges which accrue to the New With Profit and Old With Profit subfunds have been allowed for at the rate of 0.5% p.a. applied to those funds. Explicit allowance is made for commission where appropriate.

Allowance is made for the promise that the Company made to certain policyholders that the charges on certain pensions policies will not exceed 1% p.a. in any future year.

For regular premium policies, the non-unit reserve is generally determined assuming that premiums cease at the valuation date.

Where non-unit reserves are negative, these are set to zero, except where the policy terms include a surrender penalty, in which case the absolute amount of the negative reserve is limited to the surrender penalty amount.

A non-unit reserve is determined along similar lines for unitised with profits business where the investment liability arises in the company's With Profits funds, but other policy benefits, charges and expenses arise in the company's Non Profit funds.

Valuation report – IPRU (INS) Appendix 9.4 Name of insurer Aviva Life & Pensions UK Limited – Non-Profit Sub-funds Global business 31 December 2014

For Variable Annuity business (included in code 725 on Form 53), the mathematical reserve has been taken as the total amount of the internal linked funds. In view of the nature of this business, no additional non-unit reserve is required. No reserve is necessary for guarantees and options. The guarantees in the contract relate to maximum limits for levels of charge and in testing the requirement for sterling reserves no increases in the rates of charge have been assumed.

For ex-RSA regular premium linked pensions contracts the unit reserve is based on the "actuarially funded" units which are the units deemed allocated to the contracts reduced by the value of future renewal fund charges under the contract. This process is subject to the value of the actuarially funded units always being at least equal to the surrender or transfer value of the contract. For most pensions contracts there are surrender penalties which cease prior to the maturity date and so the normal actuarial funding factors have been modified to anticipate the required increase in unit value at the point at which surrender penalties cease.

For certain contracts a prudent allowance has been made for lapses.

(2) Valuation interest rates:

The interest rates used at the end of the financial year, and at the end of the previous financial year, are set out below. These are before deduction for investment expenses.

Product	31 December 2014	31 December 2013
Life Assurances		
Conventional business	1.7%	2.5%
PHI		
Standalone critical illness Income Protection	2.1%	3.2%
Active lives	1.8%	2.9%
Disabled lives	1.8%	3.1%
Disabled lives (index-linked)	(0.9)%	(0.6)%
Pensions and General Annuities		
Immediate Annuity Deferred Annuity/WDIS	2.1%	3.6%
Post vesting	2.1%	3.2%
In deferment	2.1%	3.6%
Other	2.1%	3.2%
Sterling Reserves – Life		
Discount rate	1.7%	2.8%
Sterling Reserves – Pensions		
Discount rate	2.1%	3.5%
Reassurance Accepted from Aviva Annuity UK Limited		
Non Linked annuities	3.30%	4.72%
Index Linked annuities	2.79%	0.28%
Annuities reassured from Aviva Ireland	0.95%	n/a

(3) Adjustment to yield for credit risk

The risk-adjusted yield in Form 57 has been determined after making the following allowances for risk, in accordance with INSPRU 3.1.41R.

For fixed interest assets, this adjustment took account of:

(a) The historic experience of bad debts for each of the major fixed interest asset classes,

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Limited – Non-Profit Sub-funds
Global business	
Financial year ended	31 December 2014

- (b) Market margins of gross yield over the yields of risk-free investments of a similar term in the same currency, where available,
- (c) The reasonableness of the net of adjustment yields over the yields of risk-free investments of a similar term in the same currency, taking account of the points above,
- (d) The need to take a prudent view of the above.

The adjustment made is expressed as a deduction from the expected yield and varies by type of asset as follows:

Type of Asset	Deduction from yield
Deposits	0.10%
Approved fixed interest securities	0.00%

There are no loans secured by mortgages in the Non Profit Funds at the valuation date.

For other fixed interest securities, the following deductions are made depending on the credit rating of the asset:

Credit rating	Deduction from yield
AAA	0.12%
AA	0.24%
А	0.53%
BBB	0.86%
BB	2.99%
В	6.13%
CCC-C	9.79%

The deductions above for 'other fixed interest' and mortgages include an additional amount to allow for short-term recessionary risks.

The yield on all assets is further reduced by 2.5% to allow for risk, as required by INSPRU 3.1.28R.

For Reassurance accepted from Aviva Annuity UK Limited, the adjustment for credit risk is as described in the valuation report for that company.

(4) Mortality assumptions

For ex-RSA and ex-NWL, the mortality bases used at the end of the financial year and at the end of the previous financial year were as follows:

31 December 2014	31 December 2013
------------------	------------------

Bonds		
Guaranteed Capital Bond and Guaranteed Income Bond	98.8% AMC00/AFC00 (2)	100.7% AMC00/AFC00 (2)

The assumptions for future mortality experience contain margins over and above current best estimates for such experience. This provides a margin to anticipate significant, adverse change in mortality experience as a result of changing disease incidence.

(**) The mortality percentages shown for the Over 50s Plan are age dependent as shown below:

	2014 Multiplier			2013 Multiplie	r
Age	Males %	Females %	Age	Males %	Females %
1-55	381.6	318.0	1-55	381.6	318.0
56-60	233.2	233.2	56-60	233.2	233.2
61-65	222.6	159.0	61-65	222.6	159.0
66-70	169.6	159.0	66-70	169.6	159.0
71-75	143.1	132.5	71-75	143.1	132.5
75+	127.2	116.6	75+	127.2	116.6

For 2013, a factor of 1.1 was applied to these rates in the first 24 months of the policy. For 2014, this factor remains at 1.1.

For business other than ex-RSA/NWL, the mortality bases used at the end of the financial year and at the end of the previous financial year were as follows:

CIM11A table

The following tables contain the unmodified base rates of CIM11A for term assurance with critical illness and mortgage protection with critical illness, and these should be multiplied by the factors provided above to obtain the final rates used.

A.go	Annual rates per mille:			
Age	Male Non-Smoker	Male Smoker	Female Non-Smoker	Female Smoker
25	0.84	1.02	0.54	0.73
35	1.09	1.65	1.26	1.38
45	2.56	5.53	2.74	3.85
55	7.10	16.07	6.25	9.64

For whole of life (Fifty Plus Plan), the mortality rate for age 55 is 0.0169 for males and 0.0088 for females. The product is not available to lives aged less than 50.

For 2014 and 2013, the ex-RSA and ex-NWL accelerated critical illness rates were as follows:

Assurances	31 December 2014
Term assurances post June 2001 accelerated CI	120.75% GE Adj acc (Male) 120.75% GE Adj acc (Female)
Ex-RSA lifetime security plan stand alone CI	115.00% GE Adj s/a

IC94 Adj acc is the IC94 Table loaded for Total and Permanent Disability (TPD) benefit and covers accelerated CI benefits. It does not allow for smoker status. The following rates are prior to the percentage factors given in the above table.

	IC94 Adj acc		
Age	Annual rates per mille:		
	Male Female		
25	0.43	0.65	
35	1.01	1.35	
45	3.19	3.12	
55	7.86	6.61	

GE Adj s/a is a series of tables split by sex and smoker status provided by GE Frankona. They cover stand alone CI benefits. The following rates taken from these tables are prior to the percentage factors given in the above table.

Age	GE Adj s/a Annual rates per mille:			
Ū.	Male Non-Smoker	Male Smoker	Female Non-Smoker	Female Smoker
25	0.41	0.66	0.46	0.73
35	0.85	1.33	1.11	1.94
45	2.30	4.43	2.70	4.85
55	6.42	13.89	5.96	11.83

GE Adj acc is a series of tables split by sex and smoker status provided by GE Frankona. They cover accelerated CI benefits. The following rates taken from these tables are prior to the percentage factors given in the above table.

Age	GE Adj acc Annual rates per mille:			
	Male Non-Smoker	Male Smoker	Female Non-Smoker	Female Smoker
25	0.43	0.69	0.50	0.79
35	0.84	1.33	1.16	2.02
45	2.26	4.40	2.61	4.62
55	5.46	11.91	5.13	10.11

Greater uncertainty surrounds the impact of changing disease incidence and medical advancements on future critical illness claims experience. This uncertainty was recognised in the valuation by assuming that the experience for term assurances deteriorated compound in each future year by 2.00% for males and 2.50% for females. For unit-linked products, critical illness deterioration was ignored in the base reserve as it was assumed that any experience deterioration would be met by increasing charges to policyholders.

For Reassurance Accepted from Aviva Ireland, details of the annuity mortality basis are below:

	<u>31/12/2014</u>		<u>31/12/2013</u>	
Base Table	Male %	Female %	Male %	Female %
PNMA00/PNFA00	89.0	99.0	n/a	n/a

Mortality improvement (including Reassurance accepted from Aviva Ireland and Aviva Annuity UK Limited)

The end-2014 annuitant mortality basis was derived by taking a percentage of the base table mortality rates (see relevant tables above) and applying improvement rates from the "CMI_2013" Model from base year 2001 using [1.75%] p.a. long-term improvements for Males and [1.5%] p.a. for Females; with a constant addition of 0.5% p.a. (both Males and Females) from year 2014 onwards.

The end-2013 annuitant mortality basis was derived as above, but based on the "CMI_2012" model from base year 2000. This also assumed the same long-term improvements for male (1.75%) and female (1.5%), with a constant addition of 0.5% p.a. from 2013 onwards.

For Structured Settlements from Aviva Annuity UK Limited, future improvements are taken from the principle ONS population projection, with a constant addition of 0.5% p.a.

In addition, for annuities reassured from Aviva Ireland future improvements are based on the medium cohort projection with a minimum annual improvement of 1.75%.

Impact of changes in incidence of disease

The margins in the published mortality and morbidity bases are considered sufficient to provide for adverse deviations in experience arising from various causes, so no additional reserves are held.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Limited – Non-Profit Sub-fundsGlobal businessFinancial year ended31 December 2014

(5) **Morbidity assumptions:**

Section 4(4) above includes the basis for accelerated critical illness, as well as stand-alone critical illness for ex-RSA and ex-NWL business.

Standalone Critical Illness

The morbidity bases used at the end of the financial year and at the end of the previous financial year are as follows:

Life Assurances	31 December 2014	31 December 2013
Standalone Critical Illness	Unchanged	Modified Reassurer rates (see below)
Critical Illness rider benefits	Unchanged	1 periodic premium

Rates for the modified tables for 31 December 2014 were as follows:

Age	Stand alone Critical I Annual rates per mille:			
° °	Male Non-Smoker	Male Smoker	Female Non-Smoker	Female Smoker
25	0.66	0.66	0.96	0.96
35	1.05	1.34	1.52	2.19
45	3.27	5.84	3.14	6.28
55	8.74	19.42	8.12	17.65

For critical illness policies with guaranteed premiums, a guarantee loading is applied to the critical illness rate as follows (unchanged from 2013):

	Female	Male
CI guarantee loading (for each	2.5%	2.0%
year from valuation date)	Compound	Compound

Income Protection - Claims inception rates

For Safeguard and PHI product groups these have been based on CIDA rates, adjusted by factors dependent on the age, deferred period, occupation, sex, smoker status, sales channel and location, reflecting our own experience. Further margins have been taken for prudence.

For Safeguard and PHI policies, modified rates are shown below. The rates assume the following:

Occupation class 1	Deferred period 6 months	Non-smoker status
Location – South England	Channel – IFA	Duration of policy – 5+ years

A	Safeguard and PHI ra Annual rates per mille:	tes		
Age	31 December 2014	31December 2014	31 December 2013	31December 2013
	Male	Female	Male	Female
25	0.52	0.90	0.48	0.82
35	0.48	0.83	0.44	0.76
45	0.93	1.60	0.84	1.46
55	2.21	3.81	2.01	3.46

Income Protection - Recovery rates

For Safeguard and PHI policies, these have been based on CMIR12, adjusted by factors dependent on the age, deferred period, duration and disability type, reflecting our own experience. Further margins have been taken for prudence.

Valuation report – IPRU (INS) Appendix 9.4

	Male	Female	Male	Female					
25	246.32	246.32	74.74	74.47					
35	214.13	214.13	61.82	61.82					
45	172.77	172.77	50.25	50.25					
55	122.20	122.20	40.07	40.07					

The margins in the published morbidity bases are considered sufficient to provide for adverse deviations in experience arising from changes in morbidity experience, so no additional reserves are held.

Long Term Care (Well-being and Future Care Plan)

Mortality, prior to claim - PMA80 C=2020 and PFA80 C=2020, with a deduction of 2 years to all ages.

Mortality, during claim - 95% ELT14, with additions to age depending on age and the severity of disablement.

Morbidity – the disability tables used are based on the data underlying the disability prevalence rates contained in Report 9 of the OPCS surveys of disability in Great Britain. The data was adjusted in light of the Company's underwriting policy and the definitions of the Activities of Daily Living used. The morbidity used was 115% (regular premium) and 160% (single premium) of the adjusted prevalence rates.

(6) Expense assumptions:

Details of the expense bases used at 31 December 2014 are as follows.

The value of future maintenance expenses is calculated from current maintenance expense levels by broad category of business, increasing by future expense inflation over the lifetime of each contract. The following expense assumptions, except Income Protection and ex-RSA/NWL business, are based on the terms of the Management Services Agreement between Aviva Life Services UK Limited and Aviva Life & Pensions UK Limited and increased by 10% in respect of project costs.

No zillmer adjustment was used at the end of 2014 - valuations were carried out on a Gross Premium basis

The expense assumptions are the same for both premium-paying and non-premium paying contracts.

Financial year ended

31 December 2014

525, 725	Top Up Pension Plan (regular premium)	32.13	31.11
525, 725	Top Up Pension Plan (single premium/paid up)	24.07	23.30
525, 725	Grouped Personal Pension Plan (regular premium)	64.14	62.08
400	Ex-RSA pension annuity*	20.63	19.98
400	Ex-NWL pension annuity*	22.64	21.90

* These figures are shown gross of reinsurance. These products are 100% reinsured. The net expense reserve for 2014 and 2013 is zero as there is no reassurer charge for payment service and therefore no compensation on a recapture.

All figures are gross of tax relief which is assumed at 20% on relevant products.

For Reassurance Accepted from Aviva Annuity UK Limited, the expenses follow the expenses of that fund, details of which are included in the Aviva Annuity UK Limited valuation report.

Expenses as % of Claim

Income protection claims in payment	2014	2013
- Group	10.5%	13.0%
- Individual (Mortgage Payment Protection)	14.5%	17.5%
- Individual (other)	14.5%	17.5%

Investment expenses

For ex-RSA business, valuation interest rates were reduced to allow for investment expenses (before tax relief) by 0.17%.

For ex-NWL business, valuation interest rates were reduced to allow for investment expenses (before tax relief) by 0.11%.

For other business:

For non-unit liabilities, the yield on assets backing the liabilities was reduced for investment expenses of 0.059%. This reduced the upper bound on the interest rates used in the valuation.

In the calculation of sterling reserves on unitised business, explicit allowance was made for investment expenses of 0.136% of the unit fund for unit linked investments and 0.155% of the asset share for unitised with profit investments written in the company's with profit fund.

The allowances reflect the charging structure agreed with our fund managers, Aviva Investors.

(7) Unit Growth and Inflation

The unit growth and inflation rates are as follows:

	31 December 2014	31 December 2013
RPI inflation assumption for expenses	2.99%	3.38%
Linked business		
Unit Growth Rate for gross business	3.30%	4.70%
Unit Growth Rate for net business	2.60%	3.70%
Future increases in policy charges	2.99%	3.38%

Expense inflation is set according to the terms of the Management Services Agreement between Aviva Life Services UK Limited and Aviva Life & Pensions UK Limited. This agreement was renegotiated in 2009 resulting in the per policy charges inflating at RPI (apart from ex-JV business).

(8) There are no with-profit contracts in the non-profit sub-funds.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer

Aviva Life & Pensions UK Limited – Non-Profit Sub-funds

Financial year ended 31 December 2014

(9) A summary of lapse and surrender assumptions for ex-RSA and ex-NWL is provided below:

Product		Average lapse / surrender rate for the policy years			rate for
		1-5	6-10	11-15	16-20
Decreasing Term	lapse 1	16.6%	12.5%	12.5%	12.5%
Decreasing Term	lapse 2	9.9%	7.5%	7.5%	7.5%
Level term	lapse 1	21.1%	10.0%	10.0%	10.0%
Level term	lapse 2	12.7%	6.0%	6.0%	6.0%
UL cash endowment	surrender	N/A*	N/A*	6.0%	6.0%
UL accelerated critical illness	surrender	7.6%	5.3%	5.3%	5.3%

* The surrender rates for policy year 1-5 and 6-10 are no longer applicable as those products to new business in 2000.

For other business lapse and surrender assumptions are provided below:

Product		Average lapse / surrender rate for the policy years			
		1-5	6-10	11-15	16-20
Accelerated critical illness	lapse 1	10.8%	10.4%	9.0%	9.0%
Accelerated critical illness	lapse 2	6.5%	6.2%	5.4%	5.4%
Decreasing Term	lapse 1	10.8%	10.4%	9.0%	9.0%
Decreasing Term	lapse 2	6.5%	6.2%	5.4%	5.4%
Level term	lapse 1	9.1%	4.9%	4.4%	4.4%
Level term	lapse 2	5.5%	3.0%	2.6%	2.6%
UL bond	surrender	1.9%	5.2%	7.0%	7.0%
UL individual pension, regular premium	surrender	3.3%	3.3%	3.3%	5.2%
UL individual pension, single premium	surrender	3.3%	3.3%	3.3%	5.2%
UWP individual pension, regular premium	surrender	3.3%	3.3%	3.3%	5.2%
UWP individual pension, single premium	surrender	3.3%	3.3%	3.3%	5.2%
UL group pension, regular premium	surrender	2.9%	2.9%	2.9%	4.2%
UL group pension, single premium	surrender	2.9%	2.9%	2.9%	4.2%
UWP group pension, regular premium	surrender	2.9%	2.9%	2.9%	4.2%
UWP group pension, single premium	surrender	2.9%	2.9%	2.9%	4.2%

The 'lapse 1' rates in the table are used for contracts where the reserve is negative, and the 'lapse 2' rates are used for contracts where the reserve is positive.

No PUP assumptions are shown in the above tables. It is assumed that premiums cease at the valuation date for regular premium unit-linked policies, unless the assumption of continuing premiums leads to a higher non-unit reserve.

For the vast majority of UL and UWP Bonds (96% of total mathematical reserves on all such business), automatic withdrawals are taken to be the actual withdrawal amount at the valuation date for each individual policy.

For unit-linked bonds, the surrender rates shown in the tables exclude additional surrenders at the end of the period where surrender penalties apply. The average additional surrender rate assumption is 35.9%.

(10) **Option take-up rates**

For deferred annuities with a guaranteed cash option (GAO) and assurances with a guaranteed annuity option, other than for the Pensionvestor contract, it is assumed that policyholders will choose to exercise the greater of the two options on 95% of the available benefit.

For the Pensionvestor contracts this percentage is assumed to vary linearly, from 84% on policies maturing within 1 year, to 95% on policies maturing after 12 years or more.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Limited – Non-Profit Sub-funds
Global business	
Financial year ended	31 December 2014

Taxation

Valuation interest rates on Life business include an allowance for taxation, assuming a tax rate of 20% in respect of income on Fixed Interest for Life business:

Allowance for taxation is included within the unit pricing of unit-linked funds as described in section 3(9) above.

No allowance has been made for taxation in respect of Pensions business.

Other considerations

We have considered potential changes to the GAO take-up rate assumptions to reflect the increase in flexibility announced in this year's budget. However in light of the considerable value to customers of the options it is likely to remain in most customers' best interests to take the GAO. This will be reviewed again once adequate, complete, and reliable experience data becomes available.

(11) Derivatives

Where derivative contracts are included amongst the property linked assets relating to property linked contracts they have been valued at their fair market value.

Some interest rate swap assets were hypothecated to cover liabilities within Form 57, supporting a higher valuation interest rate for applicable reserves.

As a result of the Quota share arrangement with Aviva Annuity UK Limited, Aviva Life and Pensions UK Limited shares in any movement in the derivatives of that fund. Details of the derivatives in Aviva Annuity UK Limited are outlined in that company's valuation report.

(12) Changes in INSPRU valuation rules

There were no changes in valuation methodology in 2014 arising from changes in INSPRU valuation rules which came into effect at 31 December 2006.

5. Options and Guarantees

(1) Guaranteed Annuity Options:

(a) For deferred annuities with a cash option and assurances with a guaranteed annuity option, the value of the benefits at the vesting date is the greater of the value of the annuity or the cash option, subject to option take-up rates as described in 4(10). Where a guaranteed annuity is more valuable on the valuation basis than the cash alternative, a provision for future expenses in payment is also held.

(b) Pensionvestor

Pensionvestor policies have a basic reserve of £27m.

The distribution of policies by outstanding term and retirement age is as follows:

Retirement Age		Outstanding Term (years)				Total	
	0-5	5-10	10-15	15-20	20-25	25-30	TOLAT
55 and under	0	1	0	0	0	0	1
56-60	174	46	3	0	0	0	223
61-65	70	45	10	1	0	0	126
66-70	4	1	1	0	0	0	6
71-75	23	113	152	1	0	0	289
Total	271	206	166	2	0	0	645

The guarantee reserve is £36m.

The guaranteed annuity rate is 12.244% of the cash sum for a male aged 65, based on a single life annuity payable annually in arrears.

Policyholders may make increments to the policy, but no guaranteed annuity options are given on increments.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Limited – Non-Profit Sub-funds
Global business	
Financial year ended	31 December 2014

(2) Guaranteed surrender and unit-linked maturity values:

For ex-RSA and ex-NWL, no additional investment performance guarantee reserve was considered necessary in respect of index-linked bonds since the underlying investments deliver returns which are matched to the policyholder liabilities. Derivatives contracts are used to hedge the investment guarantees provided to holders of single premium bonds.

Pension Assured Fund

Units in the Pension Assured Fund have a guaranteed price of £1 at the selected pension date or on earlier death. Details are provided in the valuation report of the Company's Provident Mutual Fund, where the majority of these guarantees arise.

Guaranteed Fund shortfall reserve

For policies invested in the Unit-Linked Guaranteed Fund, whenever the unit value at the guarantee date is less than the money-back guarantee, the New With Profits Sub Fund is liable to pay out the shortfall that will arise. Details of the guarantee reserves are included in the valuation report for that fund.

(3) Guaranteed Insurability Options

(a) The reserve for guaranteed insurability options is calculated as the option premiums received in respect of policies in force accumulated with interest.

One periodic option premium is held as a reserve for those policies which select conversion or renewal options, apart from ex-RSA/NWL business where options are not material.

(b) The table below, together with the comments that follow, gives details for certain protection policies with conversion and renewal options in the NP funds.

Product name	In-force premiums	Sum Assured	Guarantee Reserve
Level Term Assurance	£9.3m	£2,394.5m	£0.2m
Decreasing Term Assurance	£8.3m	£2,113.3m	£4.2m

Conversion option

Conversion options are included on certain policies. For an additional premium, and provided the option is selected prior to their 65th birthday, the policyholder can convert all or part of their policy without further medical evidence. If the policy is a level term assurance then it can be converted into either a non-increasing term type policy or a low cost whole of life. If the policy is a decreasing term assurance it may also be converted into an endowment assurance. In either case the maximum sum insured will be the original sum insured inflated using RPI to the conversion date.

Renewal option

Renewal options are included on certain policies. For an additional premium, and provided the term of the policy expires before the policyholder's 65th birthday (if a level term assurance) or 75th birthday (if a decreasing term assurance), the policyholder may effect a new policy at the end of the policy term. The term of the new policy must not exceed the term of the original policy. No further medical evidence is required on selecting this option, unless a critical illness or premium protected option is selected on the new policy. The maximum sum insured will be the original sum insured inflated using RPI to the conversion date.

(4) Other guarantees and options

When contracts provide other options with a specific premium, a reserve is generally held of all option premiums paid.

Some group business contains premium rate guarantees for a limited period. No specific reserve for these is considered necessary.

As a result of the Quota share arrangement with Aviva Annuity UK Limited, Aviva Life and Pensions UK Limited will share in the impact of any options exercised in that fund. Details of the options in Aviva Annuity UK Limited are outlined in that company's valuation report.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Limited – Non-Profit Sub-fundsGlobal business31 December 2014

6. Expense reserves

(1) The aggregate amount for expense loadings, grossed up for taxation where appropriate, expected to arise during 2015 is shown in the table below. This section excludes Reassurance Accepted from Aviva Annuity UK Limited.

Homogenous risk Group	Implicit allowances	Explicit allowance (investment)	Explicit allowance (other)	Non attributable expenses	Total
Unitised Life	£0.0m	£10.0m	£5.0m	£22.9m	£37.9m
Unitised individual pensions	£0.0m	£26.9m	£17.7m	£67.9m	£112.5m
Unitised employer sponsored pensior	£0.0m	£15.1m	£11.2m	£39.9m	£66.1m
All expenses attributable	£0.6m	£0.0m	£20.4m	£0.0m	£21.0m
Total	£0.6m	£52.0m	£54.3m	£130.6m	£237.5m

(2) Non-attributable expenses on unit linked business are allowed for implicitly, through expected future valuation surplus. In 2015, the valuation surplus on unit linked business of £172.7m covers the expected amount of non-attributable expenses, £130.6m.

Investment expenses on conventional business are reserved for implicitly, through a margin in the valuation interest rate. The expected expense over 2015 is £0.6m.

- (3) The total amount of maintenance expenses shown at line 14 of Form 43 (combined for the non-profit subfunds, but excluding Reassurance Accepted from Aviva Annuity UK Limited) is £196.7m. However, this reduces to £151.8m when the contribution from the business transferred to New With Profits Sub Fund in 2014 is removed, which does not contribute to the expected 2015 expense loadings above.
- (4) In determining the requirement for a new business expense overrun reserve, a prudent assessment of the projected value of 2015 new business is calculated, and compared against the projected new business expense overrun. A reserve is held if the latter exceeds the former. No new business expense overrun reserve is required in respect of 2015 new business.
- (5) In addition to per policy expense reserves, explicit expense reserves of £72.2m are held in accordance with INSPRU 1.2.50R. These reserves include appropriate allowance for expected redundancy and other costs associated with ceasing to transact new business 12 months after the valuation date, and for expense overruns in respect of business in force at the valuation date.
- (6) For unit linked business, the explicit expense reserve only covers expenses directly attributable to unit linked contracts. Non-attributable expenses are covered by future valuation surplus, and so the reserve for these expenses is zero.

7. Mismatching Reserves

- (1) The reinsurance accepted from Aviva Life and Pensions Ireland Limited is denominated in Euros and supported by specific Euro denominated assets. There is also £30.0million of Euro-denominated reserves directly written in to the non profit sub funds. Other than these, all of the mathematical reserves of the nonprofit sub-funds are held to support liabilities payable in Pounds Sterling. The funds hold sufficient sterling assets to match these liabilities. There are no Euro-denominated assets in the funds to match the £30.0 million of Euro-denominated liabilities.
- (2) There are no liabilities in non-sterling currencies other than those described in 7(1) above.
- (3) The fund does not hold an explicit reserve for the small volume of mismatched Euro-denominated liabilities. In addition, Aviva Annuity UK Limited does not hold any additional liability due to currency mismatching.
- (4) The Company is a realistic-basis firm and no resilience capital requirement is required.
- (5) The Company is a realistic-basis firm and no resilience capital requirement is required.
- (6) The Company is a realistic-basis firm and no resilience capital requirement is required.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurer	Aviva Life & Pensions UK Limited – Non-Profit Sub-funds
Global business	
Financial year ended	31 December 2014

(7) The non-profit sub-funds hold significant volumes of liquid assets (e.g. cash, certificates of deposit), mitigating the risk that the fund may have to sell assets at an unfavourable time. The firm also ensures that a significant proportion of other assets are invested in highly marketable stocks, in particular government bonds, but also corporate bonds issued by large companies. Any cash flow shortfall could therefore be met by selling some of these assets at short notice.

A further reserve of £10.0m is held against the risk of mismatching between positive and negative cash flows arising on different blocks of conventional business where positive and negative reserves are held.

8. Other Special Reserves

Counterparty Risk Reserve

A reserve of £97.8m is held for adverse deviations in respect of credit risk from reinsurer defaults. The exposure to each reinsurer by credit rating is identified, and using a probability of default for each rating, the risk amount in each calendar year is assessed. The Counterparty Risk reserve is the discounted value of the future annual counterparty risk amounts for each reinsurer.

Staff Pension Scheme Deficit Reserve

A reserve of £184.7m is held to cover the deficit funding payments to be made to the Aviva Staff Pension Scheme over a 5-year period.

Data Quality Reserves

A provision of £20m is held against the risk that the data underlying the calculation of the mathematical reserves on unit-linked business is deficient in any way. The amount of this reserve is determined by general considerations.

A similar provision of £29m is held in respect of non-linked business. The amount of this reserve is determined by general considerations.

Compensation Reserve

We hold a reserve for Product Governance compensation, amounting to £87.1m.

Closed Fund Expense Reserve

The reserve for expenses associated with ceasing to write new business is discussed in section 6(5) above.

Other special reserves for the Reassurance Accepted from Aviva Annuity UK Limited are detailed in the valuation report for that fund.

9. Reinsurance

- (1) Within the non profit sub-funds the company has no facultative reinsurance with a reinsurer who is not authorised to carry out business in the United Kingdom.
- (2) Reassurance details are provided in the table below. The third and fourth columns marked A and C indicate, respectively, whether the reassurer is authorised to carry out insurance business in the United Kingdom, and whether the reassurer is connected to the Company.
- (3) For Unit-Linked External Funds the reinsurance premium represents the net cashflow of unit transactions from Aviva UK Life fund to the external unit linked fund provider. This can be negative if, for example, claims met by the external unit-linked fund exceed premiums paid into the external unit-linked fund.

The table below includes premiums and reserves in respect of the business transferred to New With Profits Sub Fund in May 2014.

Valuation report – IPRU (INS) Appendix 9.4

Name of insurerAviva Life & Pensions UK Limited – Non-Profit Sub-fundsGlobal business31 December 2014

There are no significant undischarged obligations to the reinsurers as at 31/12/2014.

There are no deposit back arrangements in any of these treaties.

Financing Treaties (table reference N, O and AG)

Three financing arrangements exist between the Company and Swiss Reinsurance Company.

Treaties referenced in the table above as N and O are Time Deferred Stop Loss arrangements, where the recapture of the liability is contingent on future shareholder surplus; no liability for the undischarged obligation has been taken into account in the valuation.

The treaty referenced as AG in the table above is a financial reinsurance arrangement where the reinsurer has paid Aviva an upfront cash amount in exchange for future surplus payments. The future surplus payments are contingent upon surplus emerging on the in scope business.

Account has been taken of the credit risk exposure to the reinsurers in the reinsurer counterparty exposure reserve (see section 8).

10. There are no with-profits contracts in the non-profit sub-funds.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal businessFinancial year ended31 December 2014

1. Introduction

- (1) The valuation date is 31 December 2014.
- (2) The date of the previous valuation was 31 December 2013.
- (3) An interim valuation was carried out with an effective date of 30 June 2014 for the purposes of rule 9.3A.

2. Assets

(1) Economic assumptions for valuation of non-profit business

The economic assumptions used to value future profits on non-profit business are as follows:

	2014	2013
Gross investment return - Annuities	Yield on supporting assets less an allowance for defaults	Yield on supporting assets less an allowance for defaults
• Other non-profit business	Risk free rate	Risk free rate
Discount rate	Yield on supporting assets	Yield on supporting assets
- Annuities	less an allowance for defaults	less an allowance for defaults
Other non-profit business	Risk free rate	Risk free rate
Expense inflation	2.99%	3.38%
Tax rates	20%	20%

- The risk free rates used are the same as the rates used to determine guarantee costs, and shown in section 6(4)(a)(ii) below.
- The discount rate is equal to the investment return. An explicit margin is held to allow for the cost of any non-financial guarantees.
- The value of future profits on non-profit business includes the release of the LTICR in respect of nonprofit business. In assessing this release an approximate allowance is made for tax and investment expenses.
- (2) Not applicable.
- (3) Not applicable.
- (4) Not applicable.

3. With-Profits Benefits Reserve Liabilities

- (1) There are four main methods used to calculate the with-profits benefits reserve.
 - Asset share (individual) (retrospective)
 - Asset share (group) (retrospective)
 - Bonus Reserve Valuation (prospective)
 - Regulatory Reserve (prospective)

The majority of the conventional with-profits benefits reserves are asset shares calculated on an individual policy (or increment) basis. They represent an accumulation of premiums plus investment return less charges and other sources of profit or loss in line with the fund's PPFM.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal businessFinancial year ended31 December 2014

For unitised business, the asset share of a policy is defined as the sum of the asset shares of the units of the policy. Our approach calculates the asset share of each individual unit, and then aggregates across all units in a policy. We have recorded this approach as being individual.

Where asset shares are not currently calculated, or where they are unreliable as a starting point for deriving future bonuses, then either bonus reserve valuations (BRV) or regulatory reserves are used. BRVs are the discounted value of future expected benefits and expenses using risk-free earned and discount rates along with best-estimate assumptions for other basis items such as lapses and mortality. BRVs are used for the following classes of business:

- Conventional paid up policies (PUP)
- Conventional Whole Life policies
- With-profit immediate annuity business

Regulatory reserves are used for remaining small classes of business where asset share or BRV calculations are not currently carried out.

At 31 December 2014

Product Class	With-profit benefits reserve £m	Future Policy Related Liabilities £m	Total £m
Conventional Life		406	2,433
Asset Share (individual)	1,317		
Asset Share (grouped)	48		
BRV	662		
Conventional Pensions		1,834	4,006
Asset Share (individual)	1,030		
Asset Share (grouped)	232		
BRV	902		
Regulatory Reserve	8		
UWP Life		61	1,233
Asset Share (individual)	1,171		
Asset Share (grouped)	1		
UWP Pensions		355	6,227
Asset Share (individual)	5,856		
Asset Share (grouped)	15		
Miscellaneous Other	32	(54)	(22)
Total	11,274	2,602	13,876

The with-profits benefit reserves are mainly asset shares calculated on an individual policy level or, in the case of UWP business, individual unit level. The asset shares are an accumulation of premiums, investment return, expense deductions and other adjustments such as mortality profits, as set out in the fund's PPFM. Asset shares for the conventional business are charged actual expenses. Asset shares for the direct-written UWP business are charged the policy charges.

The only direct-written new business in With Profits Sub-fund (other than increments on existing contracts) is the with-profit annuity.

Conventional Life consists mainly of conventional endowments, with only £662m of whole-life contracts. The whole-life products have a bonus reserve valuation. The grouped asset shares in Conventional Life refer to adjustments that are made on a grouped basis. All conventional life products are written on a 90/10 basis. Conventional life endowment policies have guaranteed amounts at maturity equal to the basic sum assured plus any regular bonus accrued to date. Conventional whole life contracts provide a guaranteed pay-out on death of basic sum assured plus regular bonus accrued to date.

Conventional Pensions consists mainly of deferred cash schemes with attaching guaranteed minimum annuities due at retirement. There is also a block of deferred annuity business with minimum cash values at retirement. Asset shares are used for all premium-paying business. Paid up policies are valued at £623m using a BRV approach. Conventional Group Defined Benefits business uses the regulatory reserve. The grouped asset shares in Conventional Pensions refer to adjustments that are made on a grouped basis. In line with current bonus practice, the BRV is based on the final bonus scales derived from projected premium paying policies.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal business31 December 2014

Conventional Pensions also contains £279m of with-profit annuity business valued using a BRV calculation. The with-profit annuity provides a level of income equal to a basic amount, plus accrued regular bonus, plus a discretionary top-up bonus. Customers can also select a future anticipated level of regular bonus. This increases the initial annuity amount payable, but the annuity amount reduces by the anticipated amount each year such that the total annuity payable would be level if the actual regular bonus rate equalled the anticipated rate. There is also a guaranteed minimum annuity amount attaching to this contract.

UWP Life consists of unitised single premium bonds and unitised mortgage endowments all written on a 100:0 basis. UWP units purchased prior to 1 January 1999 for policies sold prior to 1 January 1995 have a guaranteed minimum regular bonus rate of 2.5% p.a.

The following guarantees apply to With Profits Sub-fund UWP bonds.

Product	Dates of Issue	Anniversary Guarantee
Capital Plan	1989-93	No MVR on 10 th 15 th 20 th etc
Norwich With-Profit, Bicentennial, and Flexibond	1996-1/10/2002	Money back on 10 th

There is also the guarantee that MVRs will not apply on any automatic partial withdrawals selected from outset (subject to certain limits).

UWP Pensions consists of unitised individual and group personal pensions written on a 100:0 basis. UWP units purchased prior to 1 January 1999 for policies sold prior to 1 January 1995 have a guaranteed minimum regular bonus rate of 4% p.a.

'Miscellaneous other' consists of reserves held to cover other liabilities to the fund that cannot be assigned to certain product types such as Pension transfer review reserves, reserves for future development and audit fees. The figure also includes the asset/liability for future smoothing costs. The miscellaneous items in the With Profits Benefit Reserve relate to amounts yet to be added to individual Asset Shares in respect of past experience.

- (2) Not applicable
- (3) See (1)
- (4) See (1)

4. With-profits benefits reserve – Retrospective method

(1) Table of methods

Method	With-profit benefits reserve (%)
Asset Share (individual)	83
Asset Share (grouped)	3
BRV	14
Regulatory Reserve	0
Miscellaneous Other	0
Total	100

The table above shows the proportion of with profit benefit reserves calculated using each method.

(2) Changes in valuation method

- (a) There have been no significant changes to the valuation methodology during 2014
- (b) Not applicable.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal businessFinancial year ended31 December 2014

(3) Allocation of expenses

- (a) See (b)
- (b) UKLS income and expenses are calculated on a monthly basis and a profit or loss determined on an annual basis.
- (c) The text below sets out the treatment of charges made to asset shares with respect to expenses and commission.

For Conventional with-profit business - the actual per policy expenses are charged to the policies

For Unitised with-profit business – the policies have defined charges as per the policy conditions, and expenses are charged to the non-profit fund.

Other expenses fall to the estate.

				2014
	Charged to WPBR	Not-Charged to WPBR	Non-Profit expenses	Total
	£m	£m	£m	£m
Estimated initial expenses and commission	0	0	0	0
Renewal expenses and commission	73	19	0	92
Shareholder Transfers	0	28	0	28

The above table approximately splits out the expenses incurred over 2014. Non-profit expenses are expenses relating to non-profit business within the fund. With Profits Sub-fund direct-written business asset shares are charged all actual per policy expenses and charges incurred.

Expenses charged to the with-profit funds

From 01/01/2009 a new Management Services agreement (MSA) is in place whereby per policy (annual) and per fund charges are made. The per fund charge is allowed for by using an estimate of the policies in force in a given year, by MSA category, and by fund. Changes in policy counts over the year will be monitored, and this will be amended to reflect the actual policy counts retrospectively.

For policies that have migrated on to the outsourced platform "Alpha", an additional per policy charge will apply.

Investment management expenses are charged to the funds in line with the Investment Management Agreement with the fund managers and are reviewed on at least an annual basis.

Commission and sales related expenses are also charged to the with-profits funds. Initial and renewal commission scales and uplifts depend on product type and the agreement with the particular sales channel.

The with-profit funds also incur other non policy-related expenses such as for development expenses, audit fees and mis-selling expenses. These are charged to the with-profit fund as laid out in each fund's PPFM.

Shareholder transfers are charged to the with-profits funds. Most conventional business is written on a 90/10 basis with transfers equal to $1/9^{th}$ of the cost of bonus. With Profits Sub-fund conventional with-profit annuity business written prior to 2 October 2002 has shareholder transfers equal to a fixed proportion of asset shares. UWP business written in With Profits Sub-fund is on a 100:0 basis.

Expenses charged to the with-profits benefit reserves

The total expenses charged to with-profits benefit reserves over 2014 are approximately £73m. The majority of this relates to renewal expenses as there is minimal new business written in With Profits Sub-fund.

Deductions are made to the asset shares in respect of expenses and commission and shareholder transfers. The difference between expenses, commission and shareholder transfers incurred and charges made are a credit to or deduction from the estate.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurer	Aviva Life & Pensions UK Ltd – With-Profits Sub-Fund		
Global business			
Financial year ended	31 December 2014		

Sales and policy administration expenses are charged to asset shares in two main ways:

Actual expenses apply to With Profits Sub-fund conventional business

Asset shares are currently charged 100% of the MSA agreement. They are also charged the management investment fee and any custody fees. Any initial or renewal commission is deducted from the asset share.

Policy charges are applied to With Profits Sub-fund UWP business

The asset share is deducted the actual charges on the policy. Also note that any surrender penalty would apply to the asset share on exit.

Expenses not charged to the with-profits benefits reserve

For UWP business written in With Profits Sub-fund the actual expenses are passed across to Non Profit Sub-fund along with the charges deducted from the asset shares, so no policy related expenses are accrued to the estate.

Shareholder transfers for With Profits Sub-fund conventional business are charged to the estate.

All development, regulatory and audit fees are not currently charged to asset shares, although this is reviewable in line with statements in the PPFMs.

(4) Guarantee Charges

No charge for the Cost of Guarantees is made in this fund.

(5) Non-Insurance Risk Charges

No explicit deduction is made from the with-profits benefit reserves in respect of non-insurance risks.

(6) Claims ratios

Fund	Product Type	2012	2013	2014
With Profits Sub-fund	Conventional Life	93%	94%	96%
	Conventional Pensions	125%	119%	119%
	UWP Life	98%	98%	98%
	UWP Pensions	98%	101%	96%

These are estimates of claim amounts relative to asset share for the past three complete calendar years.

The figures above are estimates based on actual maturity and surrender pay-outs.

All entries for Form 19 lines 32 and 33 in respect of reserves for past miscellaneous surplus and any past miscellaneous deficit are zero.

(7) Gross investment return allocated to WPBR

Gross returns allocated to asset shares over 2014 are 9.1%. This rate applies to all policies.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal businessFinancial year ended31 December 2014

5. With-profits benefits reserve – Prospective method

(1) **Prospective assumptions**

Bonus reserve valuation (BRV) is used for approximately 11% of the with-profit benefits reserve. The key blocks of business valued in this way are:

- Conventional whole life contracts, where the calculation is based on a deterministic reserve including an allowance for Final Bonus;
- Paid-up Conventional Pensions, where the calculation is based on a deterministic reserve including an allowance for Final Bonus and a stochastic uplift;
- With-profit immediate annuities, where the calculation uses stochastic final bonus rates derived from the current WPIA bonus model.

The key assumptions behind the prospective valuation of with-profit benefits reserves are as follows:

(a) Economic Assumptions

The valuation of the BRV for the conventional Pension PUPs and conventional whole life term dependent risk free rate. Sample values are:

Term (years)	Rate
1	0.65%
5	1.46%
10	1.88%
15	2.13%

For with-profit immediate annuity business an equivalent single rate is used:

Product Class	2014
With-profit Immediate Annuity	1.75%

(b) Investment returns and risk adjustments.

The BRV is based on the risk free rate.

(c) Expense inflation:

See (e) below.

(d) Future Assumed Regular Bonus Rates

Product Class	2014
Conventional Pension PUPs	0%
Whole of Life	0%
With-profit Immediate Annuity	0%

Final bonuses on paid-up pension contracts are based on the premium paying policy scales which are derived from projections of the asset shares.

(e) Future Expense Assumptions

		2015
Product Class	Renewal Expenses	Expense Inflation
	Per policy	%
Conventional Pension PUPs	£46.74	2.95
Whole Life	£23.37	2.00
With-profit Immediate Annuity	£22.14	2.99

Expenses increase with inflation at the policy anniversary.

Aviva Life & Pensions UK Ltd – With-Profits Sub-Fund

(g) Future mortality assumptions

Conventional pension PUPs: No mortality is assumed in deferment

Conventional Pension PUPs post-vesting:

	31 December 2014
Males	104.5 % of PCMA00 plus 100% medium Cohort
	Improvement factors, minimum 1.75% pa, applicable from
	2001
Females	99.5 % of PCFA00 plus 100% medium Cohort Improvement
	factors, minimum 1.5% pa, applicable from 2001

Whole Life:

	31 December 2014
Males	95% of AMN00 / 99.5% of AMS00
Females	95% of AFN00 / 99.5% of AFS00

With-Profit Annuity:

	31 December 2014
Males	99.5%* PCMA00 with 100% medium cohort improvement
	factors, minimum 1.75% pa, applicable from 2001, plus
	0.5%pa applied from 2014
Females	94.5%* PCFA00 with 100% medium cohort improvement
	factors, minimum 1.5% pa, applicable from 2001, plus
	0.5%pa applied from 2014

(2) Regulatory Reserves

The methodology for the calculation of these reserves is described in Appendix 9.4.

Miscellaneous Other

Not applicable

6. Costs of guarantees, options and smoothing

(1) Not applicable.

(2)

(a) The calculation of the cost of guarantees, options and the cost of the mortgage promise has been performed using a stochastic model.

A description of the stochastic model is given below.

(b) Grouping Basis

All valuation methods use grouped policy data. Data has been divided as follows:

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal businessFinancial year ended31 December 2014

For conventional business:

- Product class (e.g. life endowment, conventional pensions, deferred annuities and GMP business)
- Life Endowment contracts are grouped by original term, outstanding term and also by eligibility to endowment promise.
- Conventional Pensions are grouped by premium type, sex, original term, outstanding term and GAO eligibility.
- Deferred annuities are grouped by premium type, sex, policy term, outstanding term, annuity escalation rate and source admin system
- GMP business is grouped by outstanding term, sex, GMP eligibility, in-the-moneyness of the guarantee and original term

For unitised with-profit business:

- Product class (e.g. life bonds, pensions)
- Life Bonds are split by bonus series, entry year, joint life status, and guarantee type.
- Pensions are grouped by year of unit purchase, bonus series, outstanding term and guarantee type

For WPSF, we have grouped approximately 625,000 individual model points into 13,800 grouped model points.

Validations

The total grouped policy benefit data is reconciled back to the individual policy benefit data. The aggregate asset shares are reconciled to the totals in Form 19. We also undertake a comparison of the grouped model points run on a deterministic basis within the stochastic model to the ungrouped data run through the embedded value model

- (c) The stochastic model directly models over 88% of WPSF with profit business (as measured by asset share). Residual business, together with any associated guarantees, is modelled by scaling similar directly modelled business.
- (3) There has been no material changes to the valuation method for the costs of guarantees, options and smoothing.

(4) Description of guarantees, options or smoothing being valued

- (a) Stochastic Model Description of guarantees, options or smoothing
 - (i) Here follows the cost and description of the guarantees, options and smoothing methods by product grouping.

WPSF	Planned Deductions to WPBR for	Contractual Guarantee costs		Cost of Financial Options	Smoothing costs
Product Class	other costs				
Conventional Life	0	10	308	0	0
Conventional Pensions	0	1,195	0	601	0
UWP Life	0	13	48	0	0
UWP Pensions	0	355	0	0	0
Misc	8	0	0	0	(101)
Total	8	1,573	356	601	(101)

Planned Deductions to WPBR for guarantees and options

There is currently no charge for the Cost of Guarantees in this fund.

Planned Deductions to WPBR for other costs

This represents an allowance for a charge in respect of expenses incurred in the migration of business to the Admin Re platform, which is expected to be charged to Asset Shares.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Global business	
Financial year ended	31 December 2014

Contractual Guarantee Costs

To assess the extent to which guarantees or options are in or out of the money we have compared the stochastic cost included in Form 19 against the cost on the deterministic 'central-estimate' basis using the risk-free rate.

Conventional Life

This represents the cost of the basic sum assured plus any accrued bonuses to date exceeding 100% asset share under the stochastic projection.

	WPSF
Stochastic Reserve	£10m
Central Estimate	£1m
Option value	94%

Conventional life guarantees are almost completely out of the money.

Conventional Pensions

This represents the cost of the basic sum assured plus any accrued bonuses to date exceeding 100% asset share under the stochastic projection.

	WPSF
Stochastic Reserve	£406m
Central Estimate	£393m
Option value	3%

Conventional pension guarantees are in-the-money.

In addition a reserve in respect of Guaranteed Minimum Pension (GMP) liabilities on Section 32 Transfer policies arises where the value of the GMP exceeds the greater of 100% of asset share and the cost of the basic sum assured plus any accrued bonuses. This reserve has also been calculated using the stochastic projection.

	WPSF
Stochastic Reserve	£789m
Central Estimate	£793m
Option value	-1%

On those policies which have a GMP, the cost of this underpin is fully in-the-money.

UWP Life

	WPSF
Stochastic Reserve	£13m
Central Estimate	£0m
Option value	100%

This represents the cost of the payouts exceeding 100% asset share due to no-MVR guarantee under the stochastic projection. Note that this includes the cost of any guaranteed bonus rates.

The guarantees are out of the money.

UWP Pensions

	WPSF
Stochastic Reserve	£355m
Central Estimate	£189m
Option value	47%

This represents the cost of the payouts exceeding 100% asset share due to no-MVR guarantee under the stochastic projection.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal businessFinancial year ended31 December 2014

The guarantees are currently out of the money for many years of purchase. However the guaranteed return of 4% per annum return on much of this business requires an investment return in excess of 4.88% to support it, so guarantees in respect of later maturity dates are more in the money.

Non-Contractual Commitments

This represents the cost of the mortgage endowment promise from conventional endowments (plus a small cost from unitised endowments). The amount paid under the promise is the difference between the mortgage amount and policy payout if returns on the fund after tax are 6% or more, or the amount as communicated to policyholders in other circumstances.

Maximum top-up amounts have been communicated to policyholders. We have also advised policyholders that even after the Promise payment has been made they may have a shortfall.

Payment of the mortgage promise is conditional on the investment earnings achieved on the estate. These must be sufficient to pay the shortfall amounts falling due each year.

For the purposes of the valuation, we have assumed that the full promise amount would be paid at all times, with no reduction in those scenarios where the cost of the promise exceeds the investment earnings on the estate.

The payment of promise amounts also gives rise to additional transfers to shareholders.

Mortgage Endowment Promise

	WPSF
Stochastic Reserve	£356m
Central Estimate	£356m
Option value	0%

Costs of Financial Options

This represents the cost of the guaranteed annuity option (GAO) attaching to conventional deferred cash pensions. Contracts provide for a basic cash amount plus accrued regular bonus and a final bonus. The policyholder then has the option to take this cash amount or to convert this into income at guaranteed rates written into the policy conditions.

	WPSF
Stochastic Reserve	£601m
Central Estimate	£583m
Option value	3%

Guaranteed annuity options are very deeply in the money.

Smoothing Costs

The amount reported is designed to give broadly neutral smoothing costs allowing for the costs incurred to the valuation date, subject to a maximum recovery of 5% of Asset Share, consistent with statements in the PPFM for With Profits Sub-fund.

(ii) Description of the asset model

The asset model was calibrated using the following assumptions:

Risk-free rate:

• The Risk-free rate curve used in the model is shown below:

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurer

Aviva Life & Pensions UK Ltd – With-Profits Sub-Fund

Global business

Financial year ended

31 December 2014

Term	Risk-free rat	e (Swaps)
Term	Dec-13	Dec-14
1	0.61%	0.65%
2	1.05%	0.93%
3	1.48%	1.15%
4	1.85%	1.33%
5	2.16%	1.46%
6	2.42%	1.57%
7	2.65%	1.66%
8	2.83%	1.75%
9	2.99%	1.82%
10	3.11%	1.88%
15	3.48%	2.13%
20	3.60%	2.25%
25	3.60%	2.29%
30	3.56%	2.30%

- The discount rate was set equal to the UK Commercial Bank liability spot curve.
- All assets were expected to grow at the risk-free rate (i.e. risk neutral pricing was used).

Derivation of risk-free rate curve:

The risk-free rate will be based on the swap curve for both the opening and closing position.

Use of the curve:

The above risk-free rate curve was used for all option-pricing purposes.

Interest Rate Model

A monthly Libor Market Model Plus (LMM+) is used.

The LMM+ model allows for variation of interest rate volatility by moneyness of guarantees as well as by term to maturity and term of payment (for GAO and GMP). This results in a better fit to the volatility surface.

Real interest rates are modelled using a 2-factor Gaussian LMM model.

The Gaussian LMM model is a special case of the LMM+ interest rate models. The model uses two stochastic factors – this allows a richer universe of possible yield curve shapes and allows a degree of de-correlation between different parts of the yield curve. Under the Gaussian LMM+ model it is possible to obtain negative interest rates. Unlike the nominal case, this is not a problem for real interest rates as it is possible to observe negative real rates in practice. Also the initial market observed real yield curve is an input to the Gaussian LMM model and this allows for more accurate modelling of inflation.

The RPI inflation assumption is derived from the difference in modelled nominal and real interest rates using an Inflation Plus model. The CPI Inflation assumption is derived from RPI inflation using an Inflation Wedge model.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal business31 December 2014

Equity Model

Equity volatility is calibrated to equity implied volatility. The approach to calibration is to capture the volatility of the longest available option term

Exchange traded options generally only trade up to two year terms. However, this is not a very good proxy for the long term guarantees embedded in insurance contracts. Longer terms are available OTC from investment banks - the longest term available is usually 10 years. This data is collected from a panel of investment banks.

The equity model is for the excess return process. That is, the element of return in excess of cash.

Barrie and Hibbert's Stochastic Volatility Jump Diffusion (SVJD) model is used. The SVJD model allows volatility to vary by equity price and time. This allows the model to capture the volatility skew as well as the term structure. As the full implied volatility surface can be captured the model is suitable for valuing guarantees where the characteristics vary by term and moneyness. The following sample UK equity volatilities have been produced from the ESG model:

Term\Strike	0.7	0.8	0.9	1	1.1	1.2	1.3
1	26.4%	22.8%	19.6%	17.0%	14.7%	12.3%	
3	23.6%	22.2%	20.9%	19.6%	18.3%	16.9%	15.7%
5	23.2%	22.1%	21.1%	20.1%	19.2%	18.2%	17.2%
7	23.1%	22.3%	21.5%	20.7%	19.9%	19.2%	18.5%
10	23.5%	22.8%	22.1%	21.5%	20.9%	20.4%	19.8%
25	25.9%	25.6%	25.3%	25.0%	24.7%	24.4%	24.2%

Property Model

Property is modelled as an equity type asset using the constant volatility model.

The model is calibrated using a 15% volatility assumption, which is adjusted from data provided by Barrie & Hibbert for Property volatility.

Correlations

Correlations are controlled in two ways. For equity markets, correlations are defined by the exposures to common elements of the factor model. For other assets, correlations can be defined between the stochastic shocks to the returns. Shock correlations are not equivalent to return correlations. However, shock correlations can be used to target a particular return correlation.

Correlations between asset returns are targeted to best estimate assumptions. These targets have been derived by considering historical behaviour.

The target correlations used within the ESG are displayed below:

UK Equity Return versus	End Dec 2014
Property	36%
Bonds	15%
IL Bonds	11%
Short Rate	-11%
European Equities	76%
US Equities	76%
Japanese Equities	52%
Emerging Markets Equities	63%
Pacific Basin Equities	60%

Correlations between asset classes are not constant within the model and will differ from the above, but the above targets represent the level of correlation which the parameters of the model are chosen to reproduce in the long term.

Global business

Financial year ended **31 December 2014**

Notes on the table above:

Row 1 shows the value of cash payments of £1,000,000 due n years after the valuation date. Rows 2 to 15 inclusive is completed for the appropriate asset classes showing the value of a put option on a portfolio worth £1,000,000 on the valuation date exercisable n years after the valuation date with strike price of K*£1,000,000*(1+r*p)^n.

All references to 15-year bonds mean rolling bonds traded to maintain the 15 year duration at all future dates. The corporate bonds are assumed to be rolling AA rated zero coupon bonds.

Row 16 shows the value of sterling receiver swaptions with a strike of 5% exercisable n years after the valuation date with swap durations on exercise of L years. The values are expressed as a percentage of nominal.

The property put options are assumed to relate to a well diversified portfolio of UK commercial property.

A zero trend growth in property prices is assumed where this is relevant.

In each case the options are valued with reinvestment of any dividend income into the FTSE All Share index and reinvestment of any rental or other property income into UK property.

Tax is ignored in all calculations.

All options are assumed to be European-style.

This is a combined table for 6.4(a)(iii) and 6.4(b)(iii).

Equities	standard error	0.9%	1.4%	1.9%	2.5%
Broporty	1000 Simulation results	99.6%	99.2%	99.2%	99.6%
Property	standard error	0.3%	0.6%	0.9%	1.6%

(viii) Number of projections

To ensure convergence of the liabilities, separate calculations were carried out on different numbers of simulations (2500 and 5000). This has demonstrated that there is no significant change in convergence between 2500 and 5000 simulations. 2500 simulations has been used in the step through analysis over the year and in the final closing position.

(b) Market costs of hedging - Description of guarantees, options or smoothing

No guarantees, options or smoothing costs have been valued using this method.

(c) Deterministic projections - Description of guarantees, options or smoothing

No guarantees, options or smoothing costs have been valued using this method.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal business31 December 2014

(5) Management Actions

(a) There are various allowances and limitations for management actions in the stochastic model. Details of the key decisions are set out below.

Projected Equity backing Ratio (EBR)

It is assumed that management will intervene and carry out switches (over and above any market movements) of assets backing asset shares. The aim of this approach is to maximise policyholder returns, whilst managing solvency within acceptable risk levels.

If equity/property performance was poor, solvency would reduce, leading to management action to reduce the exposure to these assets. The model contains limits on the maximum change to the total EBR that can be made per month and has upper and lower EBR bounds. Additionally, the model contains limits on the maximum change to the relative proportion of equity and property that can be made per annum.

The EBR dynamic rule within the stochastic model takes into account the projected value of the future guarantees, available capital and asset shares. It then adopts a dynamic hedging approach to determine the EBR for the assets backing the asset share.

If projected asset shares are close to the projected value of the guarantees and the available capital is low, then we are less able to rely on equity/property assets, which leads to a lower EBR. However, if the projected asset shares are significantly in excess of the projected guarantees or if the available capital is high, then there is more scope to invest in equity/property and EBR can increase accordingly.

Regular Bonus Assumptions

The RB rate is set to ensure that a sufficient level of final bonus can be built up whilst also ensuring the RB rate has reasonable long term sustainability.

The stochastic model utilises a dynamic RB algorithm that depends on the projected asset share to projected guaranteed benefit relationship, along with the desired final bonus buffer and investment return assumption. This calculation also allows for a maximum per annum movement in the RB rate.

The RB algorithm has been compared with actual bonus declarations with satisfactory results.

The results produced by the application of this model are shown in 6.5(b)(i).

Guarantee Charges on asset shares

There is currently no charge for the Cost of Guarantees in this fund.

Shareholder Transfers and tax

The model assumes that transfers to shareholders continue at the rate of one ninth of the cost of bonus on Conventional Business only.

Shareholder transfers and the associated tax are assumed to be charged to asset shares or the estate in line with the PPFM.

Mortality costs

Mortality profits and losses are passed on to the asset shares of Conventional policies in line with PPFM.

Surrender costs

The current practice of the fund is to target surrender payouts at 100% of Asset Share. Consequently, no future surrender profit or loss is anticipated to emerge.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurer	Aviva Life & Pensions UK Ltd – With-Profits Sub-Fund

Financial year ended	31 December 2014

(b) Best estimate of future proportions of assets backing the WPBR.

• The projection allows for future EBR management action as discussed earlier in this document. The results reflect an average of the simulated positions.

(i) Projection at risk free rate

UWP Bonus Rates

Product	31/12/2014	31/12/2019	31/12/2024
UWP Life	1.75%	1.80%	1.69%
UWP Life with Gtee	2.50%	2.86%	2.95%
UWP Pension	2.50%	2.27%	1.88%
UWP Pension with Gtee	4.00%	4.25%	4.23%

Further notes on bonus rates:

- Units purchased before 1 January 1999 on Life policies written before 1 January 1995 have a guaranteed regular bonus rate of 2.5%;
- Units purchased before 1 January 1999 on Pensions policies written before 1 January 1995 have a guaranteed regular bonus rate of 4% p.a.

Assets Backing With-Profit Benefits Reserve

To the extent that the asset mix in the fund is different from the benchmark asset mix for the fund, it is assumed that the asset mix is reset to the benchmark immediately following the valuation date.

Consequently, the projections below are based on the benchmark asset share mix as at 31 December 2014:

Asset Class	31/12/2014	31/12/2019	31/12/2024
Equities	46.9%	43.6%	43.9%
Property	19.6%	18.2%	18.3%
Fixed Interest	29.7%	35.2%	34.8%
Cash	3.9%	3.0%	3.0%
Total Assets	100.0%	100.0%	100.0%
EBR	66.4%	61.8%	62.2%

(ii) Projection at risk free rate plus 17.5%

UWP Bonus rates

Product	31/12/2014	31/12/2019	31/12/2024
UWP Life	1.75%	2.10%	2.04%
UWP Life with Gtee	2.50%	3.02%	3.16%
UWP Pension	2.50%	2.60%	2.21%
UWP Pension with Gtee	4.00%	4.37%	4.33%

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

 Name of insurer
 Aviva Life & Pensions UK Ltd – With-Profits Sub-Fund

 Global business
 21 December 2014

Financial year ended **31 December 2014**

For UWP business we make no allowance for future premiums, so the PUP rate is not applicable.

Automatic partial withdrawals on bonds have no MVRs applied (subject to certain limits).

Mortality Assumptions

Mortality assumptions for the Realistic Balance sheet are generally best-estimate assumptions.

Annuitant Mortality

For all immediate annuities and deferred annuities in payment we use the following annuitant mortality basis

	31/12/2014
Males	104.5% PCMA00 with CMI_2013_M(1.75%) improvement factors, applicable from 2001
Females	99.5% PCFA00 with CMI_2013_F(1.5%) improvement factors, applicable from 2001

Guaranteed Annuity Option take-up rate

A take-up rate of 83% has been assumed in respect of Guaranteed Annuity options attaching to pensions.

A fixed take up rate is assumed irrespective of how in the money the option is.

The member's chosen normal retirement age has been used to determine the value of the Guaranteed Annuity Option.

(7) **Policyholder Actions**

Policyholder actions are covered by the static persistency and GAO take-up rates in the previous section, together with a dynamic overlay for certain classes of business. There is dynamic linking of policyholder behaviour in respect of no-MVR and 'money-back' guarantees for certain classes of business.

7. Financing Costs

There are no financing costs.

8. Other long-term insurance liabilities

Product Class	Any other liabilities related to treating customers fairly	Any other long-term insurance liabilities
Conventional Life	0	88
Conventional Pensions	0	38
UWP Life	0	0
UWP Pensions	0	0
Miscellaneous	0	56
Total	0	182

Any other liabilities related to treating customers fairly

No liability is held in respect of any other liabilities related to treating customers fairly.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal businessFinancial year ended31 December 2014

Any other long-term insurance liabilities

Shareholder transfers and the additional tax due on shareholder transfers are not chargeable to With Profits Sub-fund asset shares as set out in the demutualisation scheme. £126m is held in respect of these liabilities to the estate.

£45m is held to cover the cost of future expenses not charged to asset shares.

£12m is included in respect of other liabilities including future pension transfer review costs, and a reserve in respect of policyholder options.

9. Realistic current liabilities

The realistic current liabilities include the following:

- Outstanding claims
- Creditors arising out of direct insurance business
- Amounts owed to credit institutions
- Creditors in relation to current tax liabilities
- Other creditors
- Accruals and deferred income

The realistic current liabilities at 31 December 2014 are £1,787m.

The realistic current liabilities are £2m lower than the regulatory liabilities in WPSF. This reflects taking partial credit for assumed future income and capital gains for which tax due can be offset against an existing deferred tax asset.

10. Risk Capital Margin

⁽¹⁾

Fund	RCM (£m)
WPSF	278.9

(a)

(i) Changes in asset values under stress scenarios for equities and real estate (property)

Asset Class	Change in market values	
UK Equities	20.00%	
OS Equities	25.70%	
Property	12.50%	

The overseas equity change is set such that it has the same probability as UK equities changing by 20%.

A rise in market values of equity and property is more onerous than a fall in market values for WPSF.

(ii)

Asset Class	Rise in Fl yields	Fall in Fl yields
Nominal change in yields	+38bps	-38bps
long-term yield – level post-stress	2.57%	1.81%
long-term yield - % movement post-stress	+17.50%	-17.50%

The fall in fixed-interest yield scenario is more onerous.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – With-Profits Sub-FundGlobal businessFinancial year ended31 December 2014

(iii)

Fund	d	Average Increase in credit spread – excluding Approved stock	Change in Fl asset value – excluding Approved stock
WPS	SF	1.44%	-2.34%

The average increase in credit spread is weighted by current market value of fixed interest.

The change in FI asset values is from the increase in credit spreads from the credit-risk test.

No stress has been applied to any other assets in the credit risk scenario.

There is no reinsurance in the Fund.

(iv) For the persistency test a 32.5% decrease in lapse rates is tested as this increases the fund's exposure to maturity guarantees.

% increase in realistic liabilities for WPSF = 0.78%

(v) Not applicable.

(b) Management Actions under the stress tests

- (i) No changes in management actions or to any other assumptions are assumed to be made under the stress tests.
- (ii) Not applicable.
- (iii) The same investment management rules governing any change in asset mix of the fund have been used for projection of assets in the stress tests as in the central scenario.
- (iv) In the stress test, the Guarantee Charge remains at 0% for 2015 and thereafter.

(c)

(i) The assets hypothecated to back the risk capital margin are set out in the following table

WPSF Assets backing RCM	£m	%
UK equities	-	0.00%
Overseas equities	-	0.00%
Land and buildings	-	0.00%
Approved fixed interest securities	64.7	23.21%
Other fixed interest securities	-	0.00%
All other assets	214.2	76.79%
Total	278.9	100.00%

(ii) All assets backing the RCM are within the With-Profits Sub-Fund.

11. Tax

(1) Tax treatment in the with-profits benefit reserves

Asset shares are credited with net of tax investment returns allowing for actual tax rates.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

 Name of insurer
 Aviva Life & Pensions UK Ltd – With-Profits Sub-Fund

 Global business
 Fille and the second second

Financial year ended

31 December 2014

WPSF	2014
	%
Income tax	20
Capital gains tax	20
Franked income tax	-
Withholding tax	15

Capital gain tax is charged or relief credited, on unrealised gains or losses in each period allowing for the probability of the charge or relief materialising in future. A probability of 45% is assumed for 2014, this leads to a notional tax charge/credit of 9%.

(2) Tax treatment in future policy related liabilities

The following tax rates have been used in the future for all projections:

Corporation Tax	20%
Income Tax	20%
Capital Gains Tax	20%
Franked Income Tax	0%
Withholding Tax	15%

The corporate tax rate is set at 20% in respect of payments from 2015 onwards, the rate will apply from April 2015. No allowance is made for possible further reductions in this rate in future.

For asset share projections in the stochastic model, capital gains tax is levied on gains in each future period at 20% in simulations where there are sufficient cumulative indexed gains.

(3) Tax treatment in the realistic current liabilities

In the realistic regime allowance for deferred tax assets is made. The credit in relation to capital losses is reduced to allow for the probability of no future value being obtained for those capital losses. Discounting is applied for deferral of tax on deemed disposals on OEICs and any acquisition expense elements of the tax asset.

In the regulatory regime no allowance is made for deferred tax assets.

12. Derivatives

Security	WPSF Exposure at 31/12/2014
	£m
Futures on Bonds - short term trading derivatives	(3)
Futures on Equities - short term trading derivatives	872
Currency Futures	875
Property Futures	0
Inflation Rate Sw aps - pay fixed/receive floating	431
Inflation Rate Sw aps - pay floating/receive fixed	0
Inflation Rate Sw aps - pay floating/receive floating	3,566
Interest Rate Sw aps - pay fixed/receive floating	3,158
Interest Rate Sw aps - pay floating/receive fixed	7,074
Credit Default Sw aps	(16)
Total Return Sw aps - pay bonds receive libor	(253)
Total Return Sw aps - pay libor receive bonds	110
Equity Options	636

Futures are used either as part of Aviva Life & Pensions UK Limited portfolio management strategy or for risk mitigation strategies. The majority of these expire no later than 31 March 2015.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurer	Aviva Life & Pensions UK Ltd – With-Profits Sub-Fund
Global business	
Financial year ended	31 December 2014

The Interest Rate and Inflation Swaps are primarily used for risk mitigation strategies and more specifically as a partial hedge of the Guaranteed Annuity Option liability.

The Credit Default Swaps are used to manage bond spread and default risk within the fund.

The swap exposure figures are shown as gross counterparty exposure and do not allow for the offset of individual contracts against one another.

13. Analysis of working capital

		WPSF £m
Note	Working capital at 31/12/2013	1,477
	I Investment return on opening working capital and profits on assets backing liabilitie	5
:	2 Economic assumption changes	38
:	Non-economic assumption changes	55
	Policyholder action assumption changes	(25)
	5 Other experience variances	(20)
	6 Modelling changes and opening adjustments	(8)
	7 Miscellaneous liabilities	35
	Working capital at 31/12/2014	1,557

<u>Notes</u>

- 1. The profits on assets backing liabilities includes the reduction in guarantee costs arising from the release of time value in guarantees and options, returns on assets backing guarantees in excess of the movement in the cost of guarantees. It has not been possible to split return on working capital and return on guarantee costs so this has also been included in this line of the analysis.
- 2. The economic assumption impact is mainly driven by changes to bond yields and a decrease to the future implied equity and swaption volatility.
- 3. Non-economic assumption changes are driven by a weakening of the annuitant mortality assumptions and a decrease in GAO take-up rates.
- 4. The policyholder assumption change relates to a decrease in lapse rates on guaranteed products.
- 5. Experience variances include the impact of mortality, persistency longevity and expenses. The fund does not write significant volumes of new business.
- 6. Modelling changes and opening adjustments include:
 - Modelling of the BRV for paid up pensions and whole of life products
 - An increase in the allowance held in the reserves for MEP guarantee on UWP business
 - Changes to the methodology of manual adjustments to the asset share for CWP pensions
- 7. Miscellaneous liabilities include changes to the Product Governance reserve that is held.
- 8. Note that the change in other liabilities from Form 19 line 47 is included in the analysis above.
- 9. The change in working capital arising purely from the change in line 51 cannot be quantified.

14. Optional Disclosure

The split and determination of what is classified as contractual and non-contractual obligations are covered in section 6.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – Provident Mutual Sub-FundGlobal business31 December 2014

1. Introduction

- (1) The valuation date is 31 December 2014.
- (2) The date of the previous valuation was 31 December 2013.
- (3) An interim valuation was carried out with an effective date of 30 June 2014 for the purposes of rule 9.3A.

2. Assets

(1) Economic assumptions for valuation of non-profit business

The economic assumptions used to value future profits on non-profits business are as follows

	2014	2013
Gross investment return	Risk Free rate	Risk Free rate
Discount rate	Risk Free rate	Risk Free rate
Expense inflation	2.99%	3.38%
Tax rates	20%	20%

- The risk free rates used are the same as the rates used to determine guarantee costs, and shown in section 6(4)(a)(ii) below.
- The discount rate is now equal to the investment return. An explicit margin is held to allow for the cost of any non-financial guarantees.
- The value of future profits on non-profit business includes the release of the LTICR in respect of non-profit business. In assessing this release an approximate allowance is made for tax and investment expenses.
- (2) Not applicable.
- (3) Not applicable.
- (4) Not applicable.

3. With-Profits Benefits Reserve Liabilities

- (1) There are four main methods used to calculate the with-profits benefits reserve.
 - Asset share (individual) (retrospective)
 - Asset share (group) (retrospective)
 - Bonus Reserve Valuation (prospective)
 - Regulatory Reserve (prospective)

The majority of the with-profits benefits reserves are asset shares calculated on an individual policy (or increment) basis. They represent an accumulation of premiums plus investment return less charges and other sources of profit or loss in line with the fund's PPFM. A small amount of business is treated at an aggregate level using accounts and reserve information to derive the asset share.

The With Profit Benefit Reserve for With Profits Immediate Annuities is set to the bonus reserve valuation for:

• Business with entry years prior to 1984, where a BRV approach is used so that the With Profits Benefits reserve is aligned to the bonus setting process. Future bonus rates are assumed to be zero.

The total amount of With Profit Benefit Reserve calculated by reference to the BRV approach is £19m.

Regulatory reserves are used for remaining small classes of business where asset share or BRV calculations are not currently carried out.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurer

Financial year ended

31 December 2014

At 31 December 2014

Product Class	With-profit benefits reserve £m	Future Policy Related Liabilities £m	Intall
Conventional Life		3	27
Asset Share (individual)	16		
Regulatory Reserve	9		
Conventional Pensions		623	1,581
Asset Share (individual)	773		
Asset Share (group)	127		
Bonus Reserve Valuation	24		
Regulatory Reserve	34		
Miscellaneous Other	-1	48	47
Total	983	673	1,656

Aviva Life & Pensions UK Ltd - Provident Mutual Sub-Fund

Conventional life consists mainly of endowment business with £8m of whole life business. The WPBR consists of individual policy level asset shares for premium paying business, regulatory reserve of £6m for premium paying business where reliable asset shares are not available, and another £3m of regulatory reserve on paid-up policies where no historical premium payment information is available. Conventional life endowment policies have guaranteed amounts at maturity equal to the basic sum assured plus any regular bonus accrued to date. Conventional whole life contracts provide a guaranteed pay-out on death of basic sum assured plus regular bonus accrued to date. Reinsurance of endowment business to OWPSF and NWPSF has reduced the asset share of this business in the PM fund by £16m.

Conventional pensions business consists of regular and single premium cash on retirement and deferred annuity business. Many of the pensions have a guaranteed annuity option (GAO) or minimum cash value at the normal retirement date. The majority of business has asset shares calculated at an individual policy basis with some approximations where reliable premium histories are unavailable. The asset shares for the Deferred Allocation Funding (DAF) Fund are calculated at an aggregate level and total £94m at 31 December 2014.

Regulatory reserves of £34m are held mainly in respect of with-profit annuity, executive pensions and selfemployed retirement annuities where reliable asset shares are not available. The miscellaneous items in the With Profits Benefit Reserve relate to amounts yet to be added to individual Asset Shares in respect of past experience.

(2) Not applicable.

4. With-profits benefits reserve – Retrospective method

(1) Table of methods

Method	With-profit benefits reserve (%)
Asset Share (individual)	81
Asset Share (grouped)	13
BRV	2
Regulatory Reserve	4
Miscellaneous Other	0
Total	100

The table above shows the proportion of with profit benefit reserves calculated using each method.

The asset shares on a grouped basis relate to the conventional pension DAF scheme. The asset shares are an accumulation of premiums plus investment return, less claims and expenses at product level.

(2) Changes in valuation method

(a) There have been no significant changes to the valuation methodology during 2014.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – Provident Mutual Sub-FundGlobal businessFinancial year ended31 December 2014

(b) Not applicable.

(3) Allocation of expenses

- (a) See (b)
- (b) UKLS income and expenses are calculated on a monthly basis and a profit or loss determined on an annual basis.
- (c) The text below sets out the treatment of charges made to asset shares with respect to expenses and commission. Broadly speaking, all policy related expenses and commission are charged to asset shares.

				2014
	Charged to WPBR	Not-Charged to WPBR	Non-Profit expenses	Total
	£m	£m	£m	£m
Initial expenses and commission	0	1	0	1
Renewal expenses and commission	2	10	(1)	12
Shareholder Transfers	0	3	0	3

The above tables approximately splits out the expenses incurred over 2014. Non-profit expenses are expenses relating to non-profit business within the fund. PM asset shares are charged all actual expenses incurred. Charges for mortgage endowment mis-selling are deducted as an exit cost when calculating final bonus rates, however no such charge is made at present.

Expenses charged to the with-profit funds

From 01/01/2009 a new Management Services agreement (MSA) is in place whereby per policy (annual) and per fund charges are made. The per fund charge is allowed for by using an estimate of the policies in force in a given year, by MSA category, and by fund. Changes in policy counts over the year will be monitored, and this will be amended to reflect the actual policy counts retrospectively.

For policies that have migrated on to the outsourced platform "Alpha", an additional per policy charge will apply. Furthermore, there is a trail fixed charge p.a. for the years 2009-2012.

Investment management expenses are charged to the funds in line with the Investment Management Agreement with the fund managers.

Commission and sales related expenses are also charged to the with-profit fund. Initial and renewal commission scales and uplifts depend on product type and the agreement with the particular sales channel.

Shareholder transfers are charged to the with-profit fund on a 90/10 basis.

Expenses charged to the with-profits benefit reserves

The total expenses charged to with-profits benefit reserves over 2014 are approximately £2.0m. Almost all of this relates to investment expenses and renewal expenses, as PM is not open to new business other than through increments to existing contracts.

Actual sales and policy administration fees are charged to asset shares on a cost plus basis.

Actual investment management fees are charged to asset shares.

Shareholder transfers are not charged to asset shares.

Expenses not charged to the with-profits benefits reserve

Shareholder transfers are charged to the estate. The tax on shareholder transfers is paid for by the shareholders.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

 Name of insurer
 Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund

 Global business
 Image: Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund

Financial year ended **31 December 2014**

(4) Guarantee Charges

No regular deduction is made from the with profits benefit reserve of policies in respect of the cost of guarantees. A one-off adjustment is made to maturity pay-outs, as described in 6(4)(a).

(5) Non-Insurance Risk Charges

No explicit deduction is made from the with-profits benefit reserves in respect of non-insurance risks.

(6) Claims ratios

Fund	Product Type	2012	2013	2014
PM	Life	95%	102%	103%
PM	Pensions	94%	98%	103%

These are estimates of claim amounts relative to asset share for the past three complete calendar years.

The figures above for 2012 to 2014 are estimates based on actual maturity and surrender pay-outs. Figures for pensions policies are quoted relative to the asset share after any charge for projected Guarantee Annuity Option costs are applied.

All entries for Form 19 lines 32 and 33 in respect of reserves for past miscellaneous surplus and any past miscellaneous deficit are zero.

(7) Gross investment return allocated to WPBR

Gross returns allocated to asset shares over 2014 are 9.63%. This rate applies to all policies.

5. With-profits benefits reserve – Prospective method

(1) **Prospective assumptions**

2% of the PM with-profit benefits reserve is made up of bonus reserves and 4% is made up of regulatory reserves. The key assumptions are:

- (a) & (b) Valuation interest rates are as outlined in Appendix 9.4.
- (c) Expense inflation assumption is 2.99%.
- (d) Future bonus rates are as described in section 3(1).
- (e) Expense assumptions are as outlined in Appendix 9.4.
- (f) No allowance is made for lapses.
- (g) Mortality bases are as outlined in Appendix 9.4.
- (2) Not applicable.

6. Costs of guarantees, options and smoothing

- (1) Not applicable.
- (2)
- (a) The calculation of the cost of guarantees, options and smoothing has been performed using a stochastic model. A description of the stochastic model is given below.

(b) Grouping Basis

All valuation methods use grouped policy data. Data has been divided as follows:

For conventional business:

• Product class (e.g. life endowment, conventional pensions, with-profit annuity)

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurer	Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund
Global business	
Financial year ended	31 December 2014

- Life Endowment contracts are grouped by business type, age, sex and outstanding term
- Conventional Pensions are grouped by business type, age, sex, outstanding term, original term and GAO eligibility.
- With Profit Annuities are grouped by business type, age, sex, outstanding term, annuity frequency, entry year, guarantee period, advance or arrear payment, bonus series and joint life status.

For PMSF, we have grouped approximately 33,200 individual model points into 11,600 grouped model points.

Validations

The aggregate asset shares are reconciled to the totals in Form 19.

- (c) The stochastic model directly models over 81% of PMSF with profit business (as measured by asset share). Residual business, together with any associated guarantees, is modelled by scaling similar directly modelled business or appropriate manual method.
- (3) The principal changes to the valuation method for the costs of guarantees, options and smoothing since the previous valuation are:
 - Reduction of number of simulations in stochastic model from 1000 to 500

(4) Description of guarantees, options or smoothing being valued

(a) Stochastic Model - Description of guarantees, options or smoothing

(i) Here follows the cost and description of the guarantees, options and smoothing methods by product grouping.

PMSF	Planned Enhancements	Planned Deductions to WPBR for	Contractual Guarantee costs	Cost of Financial Options	Smoothing costs
Product Class	to WPBR	other costs			
Conventional Life	2	2 0	0	0	0
Conventional Pensions	68	3 0	144	358	0
Miscellaneous	(C) 7	0	0	(20)
Total	70) 7	144	358	(20)

Planned Enhancements to WPBR

When the fund is in surplus prior to adjustments, we allow for payouts on maturing policies of all classes to be enhanced. The level of the enhancement is calculated so that the net realistic working capital in the fund is zero. At 31 December 2014 the planned enhancements to WPBR totalled £70m.

Planned Deductions to WPBR for Cost of guarantees and options

When the fund is in deficit prior to adjustments, we allow for payouts on maturing policies of classes that have a Guaranteed Annuity Option to be charged a proportion of the realistic cost of providing for the Guaranteed Annuity Options attaching to many of the policies. The proportion of the cost is calculated so that the net realistic working capital in the fund is zero, and the charge is no greater than 10% of the asset share.

When the fund is in deficit prior to adjustments, payouts on maturing Endowment policies are charged the cost of any compensation payable in respect of mis-selling of Mortgage Endowments.

At 31 December 2014, there were no planned deductions.

Planned Deductions to WPBR for other costs

This represents the expected charge to Asset Shares in respect of expenses incurred in the migration of business to the Admin Re platform.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurer	Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund
Global business	
Financial year ended	31 December 2014

At 31 December 2014 the planned deductions to WPBR totalled £7m.

Contractual Guarantee Costs

To assess the extent to which guarantees or options are in or out of the money we have compared the stochastic cost included in Form 19 against the cost on the deterministic 'central-estimate' basis using the risk-free rate.

Conventional Pensions

This represents the cost of the basic sum assured plus any accrued bonuses to date exceeding 100% asset share under the stochastic projection. The cost of providing for any guaranteed annuity options is covered under the cost of financial options.

	PMSF
Stochastic Reserve	£29m
Central Estimate	£28m
Option value	4%

Conventional pensions guarantees are in the money.

Some pension policies have Guaranteed Annuity Rate options. The methodology for these reserves is covered in 6(4)(b).

Immediate Annuities

This represents the cost of guarantees on survival.

	PMSF
Stochastic Reserve	£114m
Central Estimate	£98m
Option value	14%

Immediate annuity guarantees are mostly in the money.

Costs of Financial Options

This represents the cost of the guaranteed annuity option (GAO) attaching to conventional deferred cash pensions. Contracts provide for a basic cash amount plus accrued regular bonus and a final bonus. The policyholder then has the option to take this cash amount or to convert this into income at guaranteed rates written into the policy conditions.

	PMSF
Stochastic Reserve	£358m
Central Estimate	£355m
Option value	1%

Guaranteed Annuity options are deeply in the money.

Smoothing Costs

The amount reported is designed to give broadly neutral smoothing costs allowing for the costs incurred to the valuation date, consistent with statements in the PPFM for PM.

(ii) Description of the asset model

The asset model was calibrated using the following assumptions:

Risk-free rate:

• Risk-free rate curve as shown below

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurer

Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund

Global business

Financial year ended

31 December 2014

Term	Risk-free rate (Swaps)			
Term	Dec-13	Dec-14		
1	0.61%	0.65%		
2	1.05%	0.93%		
3	1.48%	1.15%		
4	1.85%	1.33%		
5	2.16%	1.46%		
6	2.42%	1.57%		
7	2.65%	1.66%		
8	2.83%	1.75%		
9	2.99%	1.82%		
10	3.11%	1.88%		
15	3.48%	2.13%		
20	3.60%	2.25%		
25	3.60%	2.29%		
30	3.56%	2.30%		

- The discount rate was set equal to the the UK Commercial Bank liability spot curve.
- All assets were expected to grow at the risk-free rate (i.e. risk neutral pricing was used).

Derivation of risk-free rate curve:

The risk-free rate will be based on the swap curve for both the opening and closing position. The swap curve was first adopted for use in April 2012.

Use of the curve:

The above risk-free rate curve was used for all option-pricing purposes.

Interest Rate Model

A monthly Libor Market Model Plus (LMM+) is used.

The LMM+ model allows for variation of interest rate volatility by moneyness of guarantees as well as by term to maturity and term of payment (for GAO and GMP). This results in a better fit to the volatility surface.

Real interest rates are modelled using a 2-factor Gaussian LMM model.

The Gaussian LMM model is a special case of the LMM+ interest rate models. The model uses two stochastic factors – this allows a richer universe of possible yield curve shapes and allows a degree of de-correlation between different parts of the yield curve. Under the Gaussian LMM+ model it is possible to obtain negative interest rates. Unlike the nominal case, this is not a problem for real interest rates as it is possible to observe negative real rates in practice. Also the initial market observed real yield curve is an input to the Gaussian LMM model and this allows for more accurate modelling of inflation.

The RPI inflation assumption is derived from the difference in modelled nominal and real interest rates using an Inflation Plus model. The CPI Inflation assumption is derived from RPI inflation using an Inflation Wedge model.

Equity Model

Equity volatility is calibrated to equity implied volatility. The approach to calibration is to capture the volatility of the longest available option term

Exchange traded options generally only trade up to two year terms. However, this is not a very good proxy for the long term guarantees embedded in insurance contracts. Longer terms are available OTC

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A Name of insurer Aviva Life & Pensions UK Ltd – Provident Mutual Sub-Fund Global business

Financial year ended

31 December 2014

from investment banks - the longest term available is usually 10 years. This data is collected from a panel of investment banks.

The equity model is for the excess return process. That is, the element of return in excess of cash.

Barrie and Hibbert's Stochastic Volatility Jump Diffusion (SVJD) model is used. The SVJD model allows volatility to vary by equity price and time. This allows the model to capture the volatility skew as well as the term structure. As the full implied volatility surface can be captured the model is suitable for valuing guarantees where the characteristics vary by term and moneyness. The following sample UK equity volatilities have been produced from the ESG model:

Term\Strike	0.7	0.8	0.9	1	1.1	1.2	1.3
1	26.4%	22.8%	19.6%	17.0%	14.7%	12.3%	
3	23.6%	22.2%	20.9%	19.6%	18.3%	16.9%	15.7%
5	23.2%	22.1%	21.1%	20.1%	19.2%	18.2%	17.2%
7	23.1%	22.3%	21.5%	20.7%	19.9%	19.2%	18.5%
10	23.5%	22.8%	22.1%	21.5%	20.9%	20.4%	19.8%
25	25.9%	25.6%	25.3%	25.0%	24.7%	24.4%	24.2%

Property Model

Property is modelled as an equity type asset using the constant volatility model.

The model is calibrated using a 15% volatility assumption, which is adjusted from data provided by Barrie & Hibbert for Property volatility.

Correlations

Correlations are controlled in two ways. For equity markets, correlations are defined by the exposures to common elements of the factor model. For other assets, correlations can be defined between the stochastic shocks to the returns. Shock correlations are not equivalent to return correlations. However, shock correlations can be used to target a particular return correlation.

Correlations between asset returns are targeted to best estimate assumptions. These targets have been derived by considering historical behaviour.

The target correlations used within the ESG are displayed below:

UK Equity Return versus	End Dec 2014
Property	36%
Bonds	15%
IL Bonds	11%
Short Rate	-11%

Correlations between asset classes are not constant within the model and will differ from the above, but the above targets represent the level of correlation which the parameters of the model are chosen to reproduce in the long term.

Global business

Financial year ended 31 December 2014

Notes on the table above:

Row 1 shows the value of cash payments of £1,000,000 due n years after the valuation date.

Rows 2 to 15 inclusive has been completed for the appropriate asset classes showing the value of a put option on a portfolio worth \pounds 1,000,000 on the valuation date exercisable n years after the valuation date with strike price of K* \pounds 1,000,000*(1+r*p)^n.

All references to 15-year bonds mean rolling bonds traded to maintain the 15 year duration at all future dates. The corporate bonds should be assumed to be rolling AA rated zero coupon bonds.

Row 16 shows the value of sterling receiver swaptions with a strike of 5% exercisable n years after the valuation date with swap durations on exercise of L years. The values are expressed as a percentage of nominal.

The property put options assumed relate to a well diversified portfolio of UK commercial property.

A zero trend growth in property prices is assumed where this is relevant.

In each case the options are valued with reinvestment of any dividend income into the FTSE All Share index and reinvestment of any rental or other property income into UK property.

Tax is ignored in all calculations.

All options are assumed to be European-style.

This is a combined table for 6.4(a)(iii) and 6.4(b)(iii).

(vii) Nature of validations of asset model

The table below shows the discounted value of $\pounds 1$ invested on the valuation date and projected forward t years (t=5, 10, 15, 20) invested in equities and property. For a risk-neutral model, the expected result would be 100%.

t (year from valuation date)		5	10	15	20	
Equities	5000 Simulation results	99.3%	99.9%	99.9%	100.1%	
Equilies	standard error	0.4%	0.6%	0.9%	1.1%	
5000 Simulation results		100.1%	99.8%	99.5%	99.7%	
Property	standard error	0.2%	0.3%	0.5%	0.6%	
t (year from valuation date)		5	10	15	20	
Equities	1000 Simulation results	99.1%	99.7%	98.6%	99.6%	
Equilies	standard error	0.9%	1.4%	1.9%	2.5%	
Droporty	1000 Simulation results	99.6%	99.2%	99.2%	99.6%	
Property	standard error	0.3%	0.6%	0.9%	1.6%	

(viii) Number of projections

To ensure convergence of the liabilities, separate calculations were carried out on different numbers of simulations (500 and 5000). This has demonstrated that there is no significant change in convergence between 500 and 5000 simulations.

(b) Market costs of hedging - Description of guarantees, options or smoothing

No guarantees, options or smoothing costs have been valued using this method.

(c) Deterministic projections - Description of guarantees, options or smoothing

No guarantees, options or smoothing costs have been valued using this method.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - Provident Mutual Sub-FundGlobal business31 December 2014

(5) Management Actions

(a) There are various allowances and limitations for management actions in the stochastic model. Details of the key decisions are set out below.

Projected Equity Backing Ratio

It is assumed that management will intervene and carry out switches (over and above any market movements) of assets backing asset shares. The aim of this approach is to maximise policyholder returns, whilst managing solvency within acceptable risk levels.

If equity/property performance was poor, solvency would reduce, leading to management action to reduce the exposure to these assets. The model contains limits on the maximum change to the total EBR that can be made per month and has upper and lower EBR bounds.

The EBR dynamic rule within the stochastic model takes into account the projected value of the future guarantees, available capital and asset shares. It then adopts a dynamic hedging approach to determine the EBR for the assets backing the asset share.

If projected asset shares are close to the projected value of the guarantees and the available capital is low, then we are less able to rely on equity/property assets, which leads to a lower EBR. However, if the projected asset shares are significantly in excess of the projected guarantees or if the available capital is high, then there is more scope to invest in equity/property and EBR can increase accordingly.

Regular Bonus Assumptions

Except for with-profit immediate annuities, the RB rate is set to ensure that a sufficient level of final bonus can be built up whilst also ensuring the RB rate has reasonable long term sustainability.

The stochastic model utilises a dynamic RB algorithm that depends on the projected asset share to projected guaranteed benefit relationship, along with the desired final bonus buffer and investment return assumption. This calculation also allows for a maximum per annum movement in the RB rate.

For with-profit immediate annuities, no final bonus exists. For this business a RB rate is set for each bonus series based on current asset shares.

The RB algorithm has been compared with actual bonus declarations with satisfactory results.

Guarantee Charges on asset shares

The model uses no charge to asset share in respect of guarantees.

Any planned deductions are calculated separately.

Any enhancement in respect of distribution of surplus is calculated outside of the stochastic model.

Allocation of non-profit profits to asset share

It is assumed that no future non profit profits are allocated to asset shares, in line with the PPFM.

Shareholder Transfers and tax

The model assumes that transfers to shareholders continue at the current proportions of 10% of the cost of bonus.

All transfers are assumed to be paid to NWPSF in all future years.

Shareholder transfers in the PM fund are met by the estate. Additional tax due on these is a shareholder liability and is not met by the fund.

Mortality costs

Mortality profits and losses are passed on to the asset shares in line with the PPFM

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - Provident Mutual Sub-FundGlobal businessFinancial year ended31 December 2014

Surrender costs

The current practice of the fund is to target surrender payouts at 100% of Asset Share. Consequently, no future surrender profit or loss is anticipated to emerge.

(b) Best estimate of future proportions of assets backing the WPBR.

The projection allows for future EBR management action as discussed earlier in this document. The results reflect an average of the simulated positions.

(i) Projection at risk free rate

The fund does not have any Unitised With-Profits business.

Assets Backing With-Profit Benefits Reserve

Mortality Assumptions

Mortality assumptions for the Realistic Balance sheet are generally based on own experience adjusted for anticipated trends.

Annuitant Mortality

	31/12/2014
Males	100% PCMA00 with CMI_2013_M(1.75%) improvement
IVIAIES	factors, applicable from 2001
Females	100.5% PCFA00 with CMI_2013_F(1.5%) improvement
remaies	factors, applicable from 2001

Guaranteed Annuity Option take-up rate

An initial take-up rate of 78% has been assumed in respect of Guaranteed Annuity options attaching to pensions.

A fixed take up rate is assumed irrespective of how in the money the option is.

The member's chosen normal retirement age has been used to determine the value of the Guaranteed Annuity Option.

(7) **Policyholder Actions**

Policyholder actions are primarily covered by the static persistency and GAO take-up rates in the previous section. There is no dynamic linking of these decisions relative to the value of the options under each particular scenario.

7. Financing Costs

There are no financing costs.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – Provident Mutual Sub-FundGlobal businessFinancial year ended31 December 2014

8. Other long-term insurance liabilities

Product Class	Any other liabilities related to treating customers fairly	Any other long-term insurance liabilities
Conventional Life	0	1
Conventional Pensions	0	52
Miscellaneous	0	75
Total	0	128

Any other liabilities related to treating customers fairly

No liability is held in respect of any other liabilities related to treating customers fairly.

Any other long-term insurance liabilities

£53m is held in respect of the shareholder transfers which are charged to the estate.

 \pounds 75m is held in respect of payments expected to be made to UKA in respect of GAO costs incurred but not settled.

9. Realistic current liabilities

The realistic current liabilities include the following:

- Outstanding Claims
- Other creditors
- Allowance for tax credit due to excess expenses

The realistic current liabilities at 31 December 2014 are £313m.

The realistic current liabilities are £0.4m lower than the regulatory liabilities in PMSF. This reflects taking partial credit for assumed future income and capital gains for which tax due can be offset against an existing deferred tax asset.

10. Risk Capital Margin

(1)

Fund	RCM (£m)
PM	0.0

The RCM for the Fund is set to zero, as a result of the enhancement to WPBR due to the fund being closed to new business.

(a)

(i) Changes in asset values under stress scenarios for equities and real estate (property)

Asset Class	Change in market values
UK Equities	20.00%
OS Equities	25.90%
Property	12.50%

The overseas equity change is set such that it has the same probability as UK equities changing by 20%.

A rise in market values of equity and property is more onerous than a fall in market values for PMSF.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - Provident Mutual Sub-FundGlobal businessFinancial year ended31 December 2014

(ii)

Asset Class	Rise in Fl yields	Fall in Fl yields
Nominal change in yields	+38bps	-38bps
long-term yield – level post-stress	2.57%	1.81%
long-term yield - % movement post-stress	+17.50%	-17.50%

For PMSF, the rise in fixed-interest yield scenario is more onerous.

(iii)

Fund	Average Increase in credit spread – excluding Approved stock	Change in Fl asset value – excluding Approved stock
PMSF	0.84%	-4.02%

The average increase in credit spread is weighted by current market value of fixed interest.

The change in FI asset values is from the increase in credit spreads from the credit-risk test.

No stress has been applied to any other assets in the credit risk scenario.

There is no material reinsurance in the Fund.

- (iv) For the persistency test a 32.5% decrease in lapse rates is tested. This increases realistic liabilities by 0.39%, as a result of an increase in GAO and other guarantee costs
- (v) Not applicable.

(b) Management Actions under the stress tests

(i) The following changes in management actions are assumed to be made under the stress tests.

Change to payouts

Under the stress test, the reduction in surplus is met by changes to payouts for maturing policies on all classes of business subject to any reduction in payout to meet a deficit in the fund being no higher than 10% of asset share.

- (ii) An increase to pay-outs of £54m would be given in the stress test, compared to an increase to pay-outs of £70m in the central scenario.
- (iii) The cost of Guaranteed Annuity Options increases by £22m.
- (iv) The same investment management rules governing any change in asset mix of the fund have been used for the projection of assets in the stress tests as in the central scenario.
- (v) Not Applicable.

(c)

- (i) The RCM in the fund is zero.
- (ii) Not Applicable

11. Tax

(1) Tax treatment in the with-profits benefit reserves

Tax on investment returns is assumed to be 20% on BLAGAB business in line with PM asset shares being predominantly invested in fixed interest securities.

(2) Tax treatment in future policy related liabilities

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – Provident Mutual Sub-FundGlobal businessFinancial year ended31 December 2014

The following tax rates have been used in the future for all projections:

Corporation Tax	20%
Income Tax	20%
Capital Gains Tax	20%
Franked Income Tax	0%
Withholding Tax	15%

The corporate tax rate is set at 20% in respect of payments from 2015 onwards, the rate will apply from April 2015. No allowance is made for possible further reductions in this rate in future.

(3) Tax treatment in the realistic current liabilities

In the realistic regime allowance for deferred tax assets can be made. In the regulatory regime no allowance can be made. However, the effect of this on the fund is not material.

12. Derivatives

Security	PMSF Exposure at 31/12/2014
	£m
Futures on Bonds - short term trading derivatives	34
Futures on Equities - short term trading derivatives	2
Currency Futures	37
Property Futures	0
Inflation Rate Sw aps - pay fixed/receive floating	149
Inflation Rate Sw aps - pay floating/receive fixed	254
Inflation Rate Sw aps - pay floating/receive floating	470
Interest Rate Sw aps - pay fixed/receive floating	1,339
Interest Rate Sw aps - pay floating/receive fixed	2,276
Credit Default Sw aps	0
Total Return Sw aps - pay bonds receive libor	(32)
Total Return Sw aps - pay libor receive bonds	0
Equity Options	273

The exposure to futures is part of Aviva Life & Pensions UK Limited portfolio management strategy, and the majority of futures expire no later than 31 March 2015.

The exposure to Interest Rate Swaps and Inflation Rate Swaps, combined with an index-linked Gilt holding, is a partial hedge of the Guaranteed Annuity Option liability. It is expected that these will be unwound as liabilities fall due.

The swap exposure figures are shown as gross counterparty exposure and do not allow for the offset of individual contracts against one another.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – Provident Mutual Sub-FundGlobal businessFinancial year ended31 December 2014

13. Analysis of working capital

Note		PMSF £m
	Working capital at 31/12/2013	19
	Zeroisation impact	(19)
	Published Working Capital at 31/12/2013	0
	1 Investment return on opening working capital and profits on assets backing liabilitie	1
	2 Economic assumption changes	40
	3 Non-economic assumption changes	17
	4 Other experience variances	4
	5 Modelling changes and opening adjustments	23
	6 Miscellaneous liabilities	1
	Working capital at 31/12/2014	105
	Zeroisation impact	(105)
	Working capital at 31/12/2014	0

Notes:

- 1. The profits on assets backing liabilities includes the reduction in guarantee costs arising from the release of time value in guarantees and options, returns on assets backing guarantees in excess of the movement in the cost of guarantees. It has not been possible to split return on working capital and return on guarantee costs so this has also been included in this line of the analysis.
- 2. The economic assumption impact in is mainly driven by changes to bond yields.
- 3. Non-economic assumption changes are driven by a weakening of the annuitant mortality assumptions and an increase in GAO take-up rates.
- 4. Experience variances include the impact of mortality, persistency longevity and expenses.
- 5. Modelling changes and opening adjustments include a revision to the calculation methodology of the asset shares of certain group WPIA business and a provision in respect of GAO costs incurred but not settled with UKA.
- 6. Miscellaneous liabilities consist of changes in provision for future expected outgo, including product governance provisions.
- 7. The fund is closed to new business.
- 8. Note that the change in other liabilities from line 47 is included in the analysis above.
- 9. The change in working capital arising purely from the change in line 51 cannot be quantified.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

1. Introduction

- (1) The valuation date is 31 December 2014.
- (2) The date of the previous valuation was 31 December 2013.
- (3) An interim valuation was carried out with an effective date of 30 June 2014 for the purposes of rule 9.3A.

2. Assets

(1) Economic assumptions for valuation of non-profit business

The economic assumptions used to value future profits on non-profits business are as follows:

	2014	2013
Gross investment return Annuities 	Yield on supporting assets less an allowance for defaults	Yield on supporting assets less an allowance for defaults
Other non-profit business	Risk free rate	Risk free rate
Discount rate	Yield on supporting assets	Yield on supporting assets
• Annuities	less an allowance for defaults	less an allowance for defaults
Other non-profit business	Risk free rate	Risk free rate
Expense inflation	2.99%	3.38%
Taxrates	20%	20%

- The risk free rates used are the same as the rates used to determine guarantee costs, and shown in section 6(4)(a)(ii) below.
- The discount rate is now equal to the investment return. An explicit margin is held to allow for the cost of any non-financial guarantees.
- The value of future profits on non-profit business includes the release of the LTICR in respect of non-profit business. In assessing this release an approximate allowance is made for tax and investment expenses.
- (2) Not applicable.
- (3) Not applicable.
- (4) Not applicable.

3. With-Profits Benefits Reserve Liabilities

- (1) There are four main methods used to calculate the with-profits benefits reserve.
 - Asset share (individual) (retrospective)
 - Asset share (group) (retrospective)
 - Bonus Reserve Valuation (prospective)
 - Regulatory Reserve (prospective)

The majority of the with-profits benefits reserves are asset shares calculated on an individual policy (or increment) basis. They represent an accumulation of premiums plus investment return less charges and other sources of profit or loss in line with the fund's PPFM.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

Where asset shares are not currently calculated, or where they are unreliable as a starting point for deriving future bonuses, then either bonus reserve valuations (BRV) or regulatory reserves are used. BRVs are the discounted value of future expected benefits, premium and expenses allowing for best estimate future lapse and mortality assumptions. BRVs are used for the following classes of business:

- Conventional paid up policies (PUP).
- Conventional Whole Life policies.

Regulatory reserves are used for remaining small classes of business where asset share or BRV calculations are not currently carried out.

At 31 December 2014

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

The BRV figures of £487m for conventional life in NWPSF and £61m in OWPSF relate mainly to the WPBR for the whole life policies, which are now entirely BRV. The remaining £6m in NWPSF and £3m in OWPSF relates to the BRV used for endowment PUP policies.

Asset shares for all stakeholder business and all UWP business sold from 1 October 2001 are calculated using policy charges rather than actual expenses. All other asset shares are charged actual expenses.

Conventional life endowment policies have guaranteed amounts at maturity equal to the basic sum assured plus any regular bonus accrued to date. Conventional whole life contracts provide a guaranteed pay-out on death of basic sum assured plus regular bonus accrued to date. Low cost whole life policies also provide a minimum death benefit over a pre-specified term. The whole-life with-profits benefit reserve is £490m for NWPSF and £59m for OWPSF. Conventional new business is not now actively sold. Reinsurance of endowment business from PM has increased the asset share of Conventional Life by £14m in NWPSF and £2m in OWPSF.

Conventional pensions provide a guaranteed basic sum assured at maturity plus accrued regular bonuses, plus any final bonus due. Conventional pensions consist of individual and group pensions that provide either for cash or for annuity at retirement. Cash schemes usually have a guaranteed minimum annuity payable at retirement. Annuity schemes usually have a guaranteed minimum cash value at retirement. Conventional pensions are not now actively sold. In NWPSF, £12m worth of the conventional Red Plan liability uses a discounted benefit basis (BRV) and in OWPSF £1m.

Conventional pensions also includes £18m of single premium with-profit annuity business in NWPSF and $\pounds(2)m$ in OWPSF which provides a level of income equal to a basic amount, plus accrued regular bonus, plus a discretionary top-up bonus. Customers can also select a future anticipated level of regular bonus. This increases the initial annuity amount payable, but the annuity amount reduces by the anticipated amount each year such that the total annuity payable would be level if the actual regular bonus rate equalled the anticipated rate. There is also a guaranteed minimum annuity amount attaching to this contract. With-profit annuity new business is now written by Aviva Life & Pensions UK Limited With-Profits Sub-fund.

UWP Life mainly consists of unitised bonds with £59m of unitised endowments in NWPSF and £23m in OWPSF. UWP units increase in value at the declared regular bonus rates and cannot reduce at the contractual maturity dates or at contract-specific no-MVR dates. There are no contractual no-MVR dates on ex CULAC Bonds. Any final bonus due is added at policy exit. The value on exit can be subject to an MVR if exit is not at one of the contractual no-MVR dates. UWP units purchased prior to 1 February 1994 have a guaranteed minimum regular bonus rate of 3% p.a.

On Portfolio Bonds purchased between 30 January 2006 and 30 April 2009 a guarantee on premiums exists amounting to the premiums invested plus inflation growth to the encashment date, if encashment is at least five years after purchase.

Here follows a table of the various no-MVR spot rate guarantees that apply to the Aviva Life & Pensions UK Limited written UWP bonds.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Aviva With-Profit (10 year) Guaranteed Fund	13/01/2014 onwards	Money back on 10 th

There is also the guarantee that MVRs will not apply on any automatic partial withdrawals selected from outset (subject to certain limits).

UWP Pensions consists mainly of individual and Group personal pensions and pension single premium bonds. As for UWP Life, UWP units increase in value at the declared regular bonus rates and cannot reduce on death, at the selected retirement date and at age 75. Any final bonus due is added at policy exit. The value on exit can be subject to an MVR if not at the selected retirement date. No-MVR guarantees apply at the selected retirement date and at age 75. Ex CGNU UWP units purchased prior to 22 January 1996 have a guaranteed minimum regular bonus rate of 4%. Ex CULAC UWP pension units purchased up to 31 December 1992 have a guaranteed minimum regular bonus of 4% p.a.

UWP Stakeholder policies have charges capped at 1% p.a. The 1% charge is taken through unit cancellation. A no-MVR guarantee applies at the selected retirement age and at age 75.

UWP Overseas business consists of single premium bonds and regular and single premium pensions business sold in Ireland, Germany and France. The WPBR for Irish Bond business (£9m NWPSF / £4m OWPSF) and French branch business (£61m NWPSF / £13m OWPSF) is Asset Share, whilst German Bond (£2m NWPSF / £2m OWPSF) and Irish pensions (£3m NWPSF / £2m OWPSF) have a regulatory reserve.

'Miscellaneous other' consists of reserves held to cover other liabilities of the fund that cannot be assigned to certain product types such as Pension transfer review reserves and reserves for future development and audit fees and global adjustments. The figure also includes the asset/liability for future smoothing costs. The miscellaneous items in the With Profits Benefit Reserve relate to amounts yet to be added to individual Asset Shares in respect of past experience.

The expected value of future shareholder transfers to be received from OWPSF, WPSF and PMSF is recorded in this section as a "negative liability".

- (2) Not applicable
- (3) See (1)
- (4) See (1)

4. With-profits benefits reserve – Retrospective method

(1) Table of methods

Method	With-profit benefits reserve (%)				
	NWPSF	OWPSF			
Asset Share (individual)	95	94			
Asset Share (grouped)	1	1			
BRV	4	5			
Regulatory Reserve	0	0			
Miscellaneous Other	0	0			
Total	100 100				

The table above shows the proportion of with profit benefit reserves calculated using each method.

The asset shares calculated on a grouped basis relate to two UWP pension contracts (Sterling Group plan – UWP and Deposit Admin variants). The asset shares are grouped as follows:

- Product
- Bid Value of Units by year of unit purchase

Factors have then been applied to each of these groupings based on asset share to BVU ratios for sample model points. Sample model points are representative of the policies within each group allowing for factors such as average premium size and age.

(2) Changes in valuation method

- (a) There have been no significant changes have been made to the valuation method.
- (b) Not applicable.

(3) Allocation of expenses

- (a) See (b)
- (b) UKLS income and expenses are calculated on a monthly basis and a profit or loss determined on an annual basis.
- (c) The text below sets out the treatment of charges made to asset shares with respect to expenses and commission. Broadly, some policies are charged sales and administration expenses incurred by the fund, some follow this approach but have the overall charge capped, and a third group has defined charges.

Other expenses, or the difference between the expense and the charge to asset share, fall to the estate.

NWPSF

				2014
	Charged to WPBR	Not-Charged to WPBR	Non-Profit expenses	Total
	£m	£m	£m	£m
Estimated initial expenses and commission	0	7	2	9
Renewal expenses and commission	106	(53)	3	55
Shareholder Transfers	23	13	0	36

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

OWPSF

				2014
	Charged to WPBR	Not-Charged to WPBR	Non-Profit expenses	Total
	£m	£m	£m	£m
Estimated initial expenses and commission	0	1	0	3
Renewal expenses and commission	15	(2)	0	12
Shareholder Transfers	2	3	0	5

The tables above approximately split out the expenses incurred over 2014.

Non-profit expenses are expenses relating to non-profit business within the fund. For Unitised asset shares calculated on a charge basis, the expenses charged to asset shares are the relevant charges on policies. This will include additional allocation percentages as applicable, so that, for example, any excess allocation percentage above 100% of premium will give rise to negative expenses charged to the asset share in the table above.

Expenses charged to the with-profit funds

From 01/01/2009 a new Management Services agreement (MSA) is in place whereby per policy (annual) and per fund charges are made. The per fund charge is allowed for by using an estimate of the policies in force in a given year, by MSA category and by fund. Changes in policy counts over the year will be monitored, and this will be amended to reflect the actual policy counts retrospectively.

Investment management expenses are charged to the funds in line with the Investment Management Agreement with the fund managers and are reviewed on at least an annual basis.

Commission and sales related expenses are also charged to the with-profits funds. Initial and renewal commission scales and uplifts depend on product type and the agreement with the particular sales channel.

The with-profit funds also incur other non policy-related expenses such as for development expenses, audit fees and mis-selling expenses. These are charged to the with-profit fund as laid out in each fund's PPFM.

Total expenses to each fund are reported and reviewed on a monthly basis.

Shareholder transfers are charged to the with-profits funds. Most conventional business is written on a 90/10 basis with transfers equal to 1/9th of the cost of bonus. Most UWP business written by Aviva Life & Pensions UK Limited is written on a 90/10 basis, however, some single premium bond business has been written on a 91/9 and 92/8 basis.

Expenses charged to the with-profits benefit reserves

The total expenses charged to with-profits benefit reserves over 2014 are approximately £106m for NWPSF and £15m for OWSPF. The majority of this relates to renewal expenses, most new business is UWP business sold on a charges basis with the majority of the charges being the annual management charge which is charged to asset shares over the life time of the policy. An additional £23m in NWPSF and £2m in OWPSF of shareholder transfers are also charged to the with-profits benefit reserves.

Deductions are made to the asset shares in respect of expenses and commission and shareholder transfers. The difference between expenses, commission and shareholder transfers incurred and charges made are a credit to or deduction from the estate.

Sales and policy administration expenses are charged to asset shares in three main ways:

- Actual expenses incurred
- Actual expenses incurred, subject to an overall cap
- Policy charges applied

Actual expenses apply to the following product groups:

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurer	Aviva Life & Pensions UK Ltd – New/Old With-Profits Sub-Funds
Global business	
Financial vear ended	31 December 2014

- Ex CGNU Life conventional business
- Ex CULAC UWP business (excluding £441m of individual personal pensions from their 2009 migration dates)
- Ex CGNU Life UWP written implicit charge business sold prior to 1 October 2001 (implicit charge refers to bonuses being net of expenses)

In addition, all UWP Personal Pensions issued prior to 1 December 2000 have the deductions made in respect of expenses capped at 1% p.a. as part of the 'stakeholder promise'.

Asset shares are currently charged 100% of the MSA agreement. They are also charged the management investment fee and any custody fees. Any initial or renewal commission is deducted from the asset share. Shareholder transfers are also charged to the asset share.

Policy charges are applied to the following product groups:

- Ex CGNU Life written UWP implicit charge business sold 1 October 2001 onwards (implicit charge refers to bonuses being net of expenses)
- Ex CGNU Life UWP explicit charge business (2000 onwards individual pensions, stakeholder pensions and explicitly charged bonds; explicit charge bonuses are gross of expenses)
- Ex CULAC written UWP explicit charge individual pensions (from the 2009 migration date)

Expenses not charged to the with-profits benefits reserve

For ex CGNU UWP explicit charge business the difference between the actual expenses charged to the fund and the charges taken from the asset shares are accrued to the estate.

Any expenses on UWP Pensions business in excess of the stakeholder promise 1% cap is charged to the estate.

Additional tax on shareholder transfers for Aviva Life & Pensions UK Limited business is charged to the estate.

All development, regulatory and audit fees are not currently charged to asset shares, although this is reviewable in line with statements in the PPFMs.

(4) Guarantee Charges

Inflation protection bonds introduced in 2007 have a guarantee charge of 0.7% p.a. for a 10 year period.

The With Profit Guaranteed Fund introduced in 2009 has a charge of 0.7% p.a. for a 5 year period.

There are certain Aviva Life International Ltd bonds which also have a guarantee charge (0.5% p.a. for a 10 year period).

The total charge made over 2014 was £12.7m in NWPSF and £1.7m in OWPSF.

(5) Non-Insurance Risk Charges

No explicit deduction is made from the with-profits benefit reserves in respect of non-insurance risks.

(6) Claims ratios

Product Type	20	2012 2013			2014		
	NWPSF	OWPSF	NWPSF	OWPSF	NWPSF	OWPSF	
Conventional Life	94%	95%	94%	95%	98%	99%	
Conventional Pensions	115%	123%	115%	114%	122%	114%	
UWP Life	103%	101%	102%	100%	101%	100%	
UWP Pensions	95%	98%	98%	97%	99%	98%	
UWP Stakeholder	98%	98%	100%	100%	101%	101%	

The figures above are estimates based on actual maturity and surrender pay-outs.

All entries for Form 19 lines 32 and 33 in respect of reserves for past miscellaneous surplus and any past miscellaneous deficit are zero.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

(7) Gross investment return allocated to WPBR

Asset shares for NWPSF and OWPSF policies are credited investment returns based on the combined assets backing the asset shares of the fund.

Gross returns allocated to asset shares of sterling denominated business in 2014 were 9.1%

A return of 9.1% was also used in respect of business reinsured from Provident Mutual Sub-Fund into NWPSF and OWPSF.

5. With-profits benefits reserve - Prospective method

(1) **Prospective assumptions**

Bonus reserve valuation (BRV) is used for 4% of NWPSF (£575m) and 5% of OWPSF (£103m) withprofit benefits reserve. A high proportion of the with-profit benefit reserve is in respect of conventional whole life policies, 4% for NWPSF and 3% for OWPSF.

The prospective assumptions are as follows:

(a) Economic Assumptions

The valuation of the BRV for conventional Whole Life Assurance and conventional Pension PUPs uses a term dependent risk free rate for both the earned rates and discount rate. The rate is taken from Barrie & Hibbert swaps-based data. In summary these are:

Term (years)	Rate
1	0.65%
5	1.46%
10	1.88%
15	2.13%

(b) Investment returns and risk adjustments

The earned rate used is equal to the risk free rate for all asset classes, with no risk adjustment. These rates are shown in the table above.

(c) Expense inflation

Per-policy expenses inflate each calendar year at retail price index.

(d) Future Assumed Regular Bonus Rates

Ex CGNU Whole Life bonus series	SA	Bonus	
Series 6	0.0%	0.5%	
Series 5	3.5% 5	Simple	
Series 4	2.70% Compound		
Series 3	3.35% Simple		
Ex CGNU Pensions			
Conventional Pension	0%	0%	
Ex CULAC Product Class			
Conventional Whole Life	0%	1.0%	
Conventional Pension	0%	0%	

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

(e) Future Expense Assumptions

Product Class	Renewal Expenses 2015
Ex CGNU and ex CULAC Conventional Whole Life	£23.37
Ex CGNU Conventional Individual	
Pension	£46.74
Ex CGNU Conventional Group Pension	£70.10
Ex CULAC Conventional Pension	£46.74

In addition to these per-policy amounts, there is an investment management charge of 0.127% of an adjusted mathematical reserve.

(f) Future Assumed Lapse Rates

Product Class	Policy Duration								
%	1	2	3	4	5	6	7	8	9+
Ex CGNU Conventional Whole Life	3.5	3.5	3	3	3.5	3	3	3	2
Ex CULAC Conventional Whole Life	6.5	6.5	4.5	4.5	4.5	4	4	2.5	2
Ex CGNU Conventional Pension	1	1	1	1	1	1	1	1	1
Ex CULAC Conventional Pension	1.5	1.5	1.5	1.5	1.5	1.5	1.5	1.5	1.5

(g) Future mortality assumptions

Ex CGNU and ex CULAC Conventional whole life:

95%AMC00 / 95%AFC00 / 95%AMC00 / 95%AFC00

Conventional pensions:

70%AMN00 / 70%AFN00 / 70%AMS00 / 70%AFS00

No further adjustments are made to these tables.

Additional allowance for AIDS mortality	
Ex CGNU Conventional whole life:	nil
Ex CULAC Conventional whole life:	nil
Ex CGNU Conventional pensions:	nil
Ex CULAC Conventional pensions:	25% of table R6B for Males, nil for Females

(2) Regulatory Reserves

Regulatory Reserves cover less than 1% of the with-profit benefits reserve. The classes of business covered by this include CWP pensions, UWP German and Irish Pensions business, and other miscellaneous business. The methodology for the calculation of these reserves is described in Appendix 9.4.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

6. Costs of guarantees, options and smoothing

- (1) Not applicable.
- (2)
- (a) The calculation of the cost of guarantees, options and smoothing and the cost of the mortgage promise has been performed using a stochastic model with a few exceptions.

The cost of section 32 guaranteed minimum pensions have been valued using a market value replication technique – this is described in section 6(4)(b).

A description of the stochastic model is given below.

(b) Grouping Basis

All valuation methods use grouped policy data. Data has been divided as follows:

For conventional business:

- Product class (e.g. life endowment, conventional pensions)
- Life Endowment contracts are grouped by original term, outstanding term and also by eligibility to endowment promise.
- Conventional Pensions are grouped by premium type, original term, premium term and outstanding term.

For unitised with-profit business:

- Product class (e.g. life bonds, individual pensions, stakeholder pensions, trustee investment plans)
- Life Bonds are split by bonus series, entry year and quarter, joint life status, country and lapse class.
- Individual Pensions are grouped by original term, outstanding term, bonus series and by paid up status. Females are allowed for by making a 4 year age deduction.
- Stakeholder/Stakeholder Friendly Pensions are grouped by original term, outstanding term, premium escalation rate, paid up status and by split of surplus between policyholders and shareholders (e.g. 90/10 versus 100/0)
- Trustee investment plans are grouped by entry year, bonus series and frequency of regular withdrawals.
- Group Deferred Annuities are grouped by age at entry, sex, GAO rate and escalation rate.

For NWPSF and OWPSF combined, we have grouped approximately 818,400 individual model points into 14,900 grouped model points.

Validations

The total grouped policy benefit data is reconciled back to the individual policy benefit data. The aggregate asset shares are reconciled to the totals in Form 19. We also undertake a comparison of the grouped model points run on a deterministic basis within the stochastic model to the ungrouped data run through the embedded value model.

- (c) The stochastic model directly models over 90% of NWPSF and over 88% of OWPSF with profit business (as measured by asset share). Residual business, together with any associated guarantees, is modelled by scaling similar directly modelled business.
- (3) The principal changes to the valuation method for valuing the costs of guarantees, options or smoothing since the previous valuation are the following:
 - Introduction of new functionality to refine the modelling of guarantees linked to inflation

(4) Description of guarantees, options or smoothing being valued

(a) Stochastic Model - Description of guarantees, options or smoothing

(i) Here follows the cost and description of the guarantees, options and smoothing methods by product grouping.

Total	83	4	2	236	38	1

Planned Enhancements to WPBR

For UWP Life, the amounts represent the cost of an additional 0.5% p.a. regular bonus on Loyalty Fund units.

In OWPSF the board has agreed to distribute \pounds 83m of the Estate by way of 9% uplift to all policies that exit, backdated to 1/7/2014.

For UWP Pensions, the amounts represent increased payouts in respect of loyalty bonus on a variety of contracts sold in the 1990s.

For OWPSF, this amount represents the "special distribution" announced by the UK Life board in February 2015, which will be applied as an enhancement to payouts at maturity.

Planned Deductions to WPBR for Guarantee costs

This amount represents expected charges for guarantees on certain UWP life contracts sold since 2007.

Planned Deductions to WPBR for Other costs

There is also an allowance for a charge in respect of expenses incurred in the migration of business to the Admin Re platform, which is expected to be charged to Asset Shares.

Contractual Guarantee Costs

In addition to the figures in the table below there is $\pounds 48m$ (NWPSF) and $\pounds 6m$ (OWPSF) of contractual Guarantee Costs relating to Section 32 Guaranteed Minimum Pension costs, which are valued using a non-stochastic method (see 6(4) (b))

To assess the extent to which guarantees or options are in or out of the money we have compared the stochastic cost included in Form 19 against the cost on the deterministic 'central-estimate' basis using the risk-free rate.

Conventional Life

This represents the cost of the basic sum assured plus any accrued bonuses to date exceeding 100% asset share under the stochastic projection.

	NWPSF	OWPSF
Stochastic Reserve	£49m	£13m
Central Estimate	£8m	£2m
Option value	84%	85%

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurer Global business Financial year ended

Aviva Life & Pensions UK Ltd – New/Old With-Profits Sub-Funds

31 December 2014

The option value is the proportion of the total stochastic cost that exceeds the central-estimate cost. Conventional Life guarantees remain largely out of the money.

Mortgage Endowment Promise

	NWPSF	OWPSF	
Stochastic Reserve	£315m	£79m	
Central Estimate	£317m	£79m	
Option value	-1%	-1%	

This represents the cost of the mortgage endowment promise from conventional endowments. The amount reserved for is the difference between the mortgage amount and policy payout if returns on the fund after tax are 6% or more, from the end of 1999 to the maturity date of the policy, or the amount as communicated to policyholders in other circumstances.

Maximum top-up amounts have been communicated to policyholders. We have also advised policyholders that even after the Promise payment has been made they may have a shortfall.

The payment of promise amounts also gives rise to additional transfers to shareholders.

The option value is negative as in some scenarios very good returns will mean we don't need to pay the full promise amount.

Conventional Pensions

This represents the cost of the basic sum assured plus any accrued bonuses to date exceeding 100% asset share under the stochastic projection. The costs of providing for any guaranteed annuity options is covered under the cost of financial options, although the cost of providing deferred annuities is included here.

	NWPSF	OWPSF
Stochastic Reserve	£151m	£29m
Central Estimate	£146m	£29m
Option value	4%	3%

Conventional pension guarantees are in the money.

UWP life

This represents

- the cost of the payouts exceeding 100% of asset share due to no-MVR guarantee under the stochastic projection;
- the cost of the single premium increased with inflation exceeding 100% of asset share for inflation protected bonds in line with the product terms; and
- the cost of other guarantees on death, partial withdrawal and maturity exceeding 100% of asset share.

NWPSF

Type of guarantee	No-MVR Guarantee	Inflation-protected	Other Bond	
Type of guarantee	on Bond surrenders	Bonds	guarantees	
Stochastic Reserve	£50m	£405m	£69m	
Central Estimate	£7m	£326m	£14m	
Option value	85%	19%	80%	

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

<u>OWPSF</u>

Type of guarantee	No-MVR Guarantee	Inflation-protected	Other Bond
Type of guarantee	on Bond surrenders	Bonds	guarantees
Stochastic Reserve	£5m	£48m	£7m
Central Estimate	£1m	£38m	£1m
Option value	84%	21%	86%

Some of the no-MVR guarantees, taken out in the period from 1998 to 2001 remain in the money.

The inflation protected guarantees have significant time value due to stock market performance since the inception date of these policies.

UWP pensions

This represents the cost of the payouts exceeding 100% asset share due to no-MVR guarantee under the stochastic projection.

	NWPSF	OWPSF
Stochastic Reserve	£115m	£30m
Central Estimate	£40m	£10m
Option value	65%	66%

UWP Pension guarantees are still largely out of the money.

UWP Stakeholder pensions

This represents the cost of the payouts exceeding 100% asset share due to no-MVR guarantee under the stochastic projection.

	NWPSF	OWPSF
Stochastic Reserve	£28m	£4m
Central Estimate	£3m	£0m
Option value	90%	90%

Stakeholder pension guarantees are largely out of the money.

Costs of Financial Options

This represents the cost of the guaranteed annuity option (GAO) attaching to conventional deferred cash pensions. Contracts provide for a basic cash amount plus accrued regular bonus and a final bonus. The policyholder then has the option to take this cash amount or to convert this into income at guaranteed rates written into the policy conditions.

NWPSF	CWP GAO	UWP GAO
Stochastic Reserve	£129m	£68m
Central Estimate	£127m	£68m
Option value	2%	-1%

OWPSF	CWP GAO	UWP GAO	
Stochastic Reserve	£35m	£3m	
Central Estimate	£35m	£3m	
Option value	2%	-1%	

Guaranteed annuity options are in the money.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

Smoothing Costs

The amount reported is designed to give broadly neutral smoothing costs allowing for the costs incurred to the valuation date, consistent with statements in the PPFM for both NWPSF and OWPSF. The reported figure also allows for future smoothing on Stakeholder business to recover any past/future smoothing and guarantee costs in line with the PPFM.

(ii) Description of the asset model

The asset model was calibrated using the following assumptions:

Risk-free rate:

• The Risk-free rate curve used in the model is shown below:

Term	Risk-free rat	e (Swaps)	
Term	Dec-13	Dec-14	
1	0.61%	0.65%	
2	1.05%	0.93%	
3	1.48%	1.15%	
4	1.85%	1.33%	
5	2.16%	1.46%	
6	2.42%	1.57%	
7	2.65%	1.66%	
8	2.83%	1.75%	
9	2.99%	1.82%	
10	3.11%	1.88%	
15	3.48%	2.13%	
20	3.60%	2.25%	
25	3.60%	2.29%	
30	3.56% 2.30%		

- The discount rate was set equal to the UK Commercial Bank liability spot curve.
- All assets were expected to grow at the risk-free rate (i.e. risk neutral pricing was used).

Derivation of risk-free rate curve:

The risk-free rate will be based on the swap curve for both the opening and closing position.

Use of the curve:

The above risk-free rate curve was used for all option-pricing purposes.

Interest Rate Model

A monthly Libor Market Model Plus (LMM+) is used.

The LMM+ model allows for variation of interest rate volatility by moneyness of guarantees as well as by term to maturity and term of payment (for GAO and GMP). This results in a better fit to the volatility surface.

Real interest rates are modelled using a 2-factor Gaussian LMM model.

The Gaussian LMM model is a special case of the LMM+ interest rate models. The model uses two stochastic factors – this allows a richer universe of possible yield curve shapes and allows a degree of de-correlation between different parts of the yield curve. Under the Gaussian LMM+ model it is possible to obtain negative interest rates. Unlike the nominal case, this is not a problem for real interest rates as it is possible to observe negative real rates in practice. Also the initial market observed real yield curve is an input to the Gaussian LMM model and this allows for more accurate modelling of inflation.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurer	Aviva Life & Pensions UK Ltd – New/Old With-Profits Sub-Funds
Global business	
Financial year ended	31 December 2014

The RPI inflation assumption is derived from the difference in modelled nominal and real interest rates using an Inflation Plus model.

The CPI Inflation assumption is derived from RPI inflation using an Inflation Wedge model, with a parameter that, in the long-term, the average level of CPI is 1.0% lower than RPI, to reflect that historically inflation has been lower on this measure than that derived from the RPI.

Equity Model

Equity volatility is calibrated to equity implied volatility. The approach to calibration is to capture the volatility of the longest available option term

Exchange traded options generally only trade up to two year terms. However, this is not a very good proxy for the long term guarantees embedded in insurance contracts. Longer terms are available OTC from investment banks - the longest term available is usually 10 years. This data is collected from a panel of investment banks.

The equity model is for the excess return process. That is, the element of return in excess of cash.

Barrie and Hibbert's Stochastic Volatility Jump Diffusion (SVJD) model is used. The SVJD model allows volatility to vary by equity price and time. This allows the model to capture the volatility skew as well as the term structure. As the full implied volatility surface can be captured the model is suitable for valuing guarantees where the characteristics vary by term and moneyness. The following sample UK equity volatilities have been produced from the ESG model:

Term\Strike	0.7	0.8	0.9	1	1.1	1.2	1.3
1	26.4%	22.8%	19.6%	17.0%	14.7%	12.3%	
3	23.6%	22.2%	20.9%	19.6%	18.3%	16.9%	15.7%
5	23.2%	22.1%	21.1%	20.1%	19.2%	18.2%	17.2%
7	23.1%	22.3%	21.5%	20.7%	19.9%	19.2%	18.5%
10	23.5%	22.8%	22.1%	21.5%	20.9%	20.4%	19.8%
25	25.9%	25.6%	25.3%	25.0%	24.7%	24.4%	24.2%

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

Property Model

Property is modelled as an equity type asset using the constant volatility model.

The model is calibrated using a 15% volatility assumption, which is adjusted from data provided by Barrie & Hibbert for Property volatility.

Correlations

Correlations are controlled in two ways. For equity markets, correlations are defined by the exposures to common elements of the factor model. For other assets, correlations can be defined between the stochastic shocks to the returns. Shock correlations are not equivalent to return correlations. However, shock correlations can be used to target a particular return correlation.

Correlations between asset returns are targeted to best estimate assumptions. These targets have been derived by considering historical behaviour.

The target correlations used within the ESG are displayed below:

UK Equity Return versus	End Dec 2014
Property	36%
Bonds	15%
IL Bonds	11%
Short Rate	-11%
European Equities	76%
US Equities	76%
Japanese Equities	52%
Emerging Markets Equities	63%
Pacific Basin Equities	60%

Correlations between asset classes are not constant within the model and will differ from the above, but the above targets represent the level of correlation which the parameters of the model are chosen to reproduce in the long term.

Name of insurer Aviva Life & Pensions UK Ltd – New/Old With-Profits Sub-Funds

Global business

Financial year ended **31 December 2014**

Notes on the table above:

Row 1 shows the value of cash payments of \pounds 1,000,000 due n years after the valuation date. Rows 2 to 15 inclusive were completed for the appropriate asset classes showing the value of a put option on a portfolio worth \pounds 1,000,000 on the valuation date exercisable n years after the valuation date with strike price of K* \pounds 1,000,000*(1+r*p)^n.

All references to 15-year bonds mean rolling bonds traded to maintain the 15 year duration at all future dates. The corporate bonds should be assumed to be rolling AA rated zero coupon bonds.

Row 16 shows the value of sterling receiver swaptions with a strike of 5% exercisable n years after the valuation date with swap durations on exercise of L years. The values are expressed as a percentage of nominal.

The property put options are assumed to relate to a well diversified portfolio of UK commercial property.

A zero trend growth in property prices is assumed where this is relevant.

In each case the options should be valued with reinvestment of any dividend income into the FTSE All Share index and reinvestment of any rental or other property income into UK property.

Tax should be ignored in all calculations.

All options should be assumed to be European-style.

This is a combined table for 6(4)(a)(iii) and 6(4)(b)(iii).

(iv) Initial Equity and Property Rental Yields

For UK, the initial equity dividend yield is 3.54% and the initial property rental yield is 4.3%.

(v) UK risk free rates are applied throughout.

(vi) Duration of significant guarantees

The following tables show the durations of significant guarantees and promises for the with-profits funds. Duration is calculated as weighted average of projected maturity years with weights equal to the cost of guarantees. Anyone past Normal Retirement date is assumed to retire immediately.

(vii) Nature of validations of asset model

The table below shows the discounted value of £1 invested on the valuation date and projected forward t years (t=5, 10, 15, 20) invested in equities and property. For a risk-neutral model, the <u>expected result would be 100%</u>.

t (yea	ar from valuation date)	5	10	15	20
Equities 5000 Simulation result		99.3%	99.9%	99.9%	100.1%
Equilies	standard error	0.4%	0.6%	0.9%	1.1%
Droporty	5000 Simulation results	100.1%	99.8%	99.5%	99.7%
Property	standard error	0.2%	0.3%	0.5%	0.6%

t (yea	ar from valuation date)	5	10	15	20
Equities 1000 Simulation results		99.1%	99.7%	98.6%	99.6%
Equilies	standard error	0.9%	1.4%	1.9%	2.5%
Droporty	1000 Simulation results	99.6%	99.2%	99.2%	99.6%
Property	standard error	0.3%	0.6%	0.9%	1.6%

(viii) Number of projections

To ensure convergence of the liabilities, separate calculations were carried out on different numbers of simulations (2500 and 5000). This has demonstrated that there is no significant change in convergence between 2500 and 5000 simulations. 2500 simulations have been used in the step through analysis over the year and for the final closing position.

(b) Market costs of hedging - Description of guarantees, options or smoothing

A small reserve for GMP guarantees on Section 32 Transfer policies is held. This reserve has been calculated as the statutory provision, with an adjustment to allow for future bonuses together with a 15% uplift. These costs have been included in the figures quoted in 6(4)(a)(i).

Note the GMP liabilities are calculated using an annuity vesting rate based on the average duration of liabilities rather than a curve.

The costs of these guarantees are shown below.

st of Guaranteed Minimum Pensions £m	NWPSF Cost of (
f GMP gtee on S32 42	Base Cost of GM
6	Uplift (15%)
48	Total
	Total

OWPSF Cost of Guaranteed Minimum Pensions	£m
Base Cost of GMP gtee on S32	5
Uplift (15%)	1
Total	6

(c) Deterministic projections - Description of guarantees, options or smoothing

No guarantees, options or smoothing costs have been valued using this method.

(5) Management Actions

a) There are various allowances and limitations for management actions in the stochastic model. Details of the key decisions are set out below.

Projected Equity backing Ratio (EBR)

It is assumed that management will intervene and carry out switches (over and above any market movements) of assets backing asset shares. The aim of this approach is to maximise policyholder returns, whilst managing solvency within acceptable risk levels.

If equity/property performance was poor, solvency would reduce, leading to management action to reduce the exposure to these assets. The model contains limits on the maximum change to the total EBR that can be made per month and has upper and lower EBR bounds, which are consistent with the requirements of the reattribution scheme. Additionally, the model contains limits on the maximum change to the relative proportion of equity and property that can be made per annum.

The EBR dynamic rule within the stochastic model takes into account the projected value of the future guarantees, available capital and asset shares. It then adopts a dynamic hedging approach to determine the EBR for the assets backing the asset share.

If projected asset shares are close to the projected value of the guarantees and the available capital is low, then we are less able to rely on equity/property assets, which leads to a lower EBR. However, if the projected asset shares are significantly in excess of the projected guarantees or if the available capital is high, then there is more scope to invest in equity/property and EBR can increase accordingly.

Regular Bonus Assumptions

The RB rate is set to ensure that a sufficient level of final bonus can be built up whilst also ensuring the RB rate has reasonable long term sustainability.

The stochastic model utilises a dynamic RB algorithm that depends on the projected asset share to projected guaranteed benefit relationship, along with the desired final bonus buffer and investment return assumption. This calculation also allows for a maximum per annum movement in the RB rate.

The RB algorithm has been compared with actual bonus declarations with satisfactory results.

The results produced by the application of this model are shown in 6.5(b)(i).

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

 Name of insurer
 Aviva Life & Pensions UK Ltd – New/Old With-Profits Sub-Funds

 Global business
 31 December 2014

Guarantee Charges on asset shares

The model uses a 0.7% guarantee charge for that UWP life business written since 2007 where this guarantee charge is applicable.

There are certain Aviva Life International Ltd bonds which also have a guarantee charge (0.5% p.a. for a 10 year period).

Allocation of non-profit profits to asset share

No future profits from Non Profits business will be allocated to the Asset Shares in the funds, in accordance with the terms of the reattribution scheme.

Shareholder Transfers and tax

The model allows for shareholder transfers to continue in accordance with the current proportions of the cost of bonus.

All future shareholder transfers arising from NWPSF will be retained within NWPSF, as approved by the UK Life board in 2014.

All future shareholder transfers arising from OWPSF, WPSF and PMSF are assumed to be paid to NWPSF in all future years, as approved by the UK Life board in 2014.

Shareholder transfers and the associated tax are assumed to be charged to asset shares or the estate in line with the PPFM. For shareholder transfer payments arising from Mortgage Endowment Promise both shareholder transfer and tax will be charged to the estate.

Mortality costs

Mortality profits and losses are passed on to the asset shares in line with the PPFMs.

Surrender costs

The current practice of the fund is to target surrender payouts at 100% of Asset Share. Consequently, no future surrender profit or loss is anticipated to emerge.

b) Best estimate of future proportions of assets backing the WPBR.

• The projection allows for future EBR and bonus rate management action as discussed earlier in this document. The results reflect an average of the simulated positions.

		1-5	6-10	11-15	16-20
CWP savings endow ment	surrender	n/a	n/a	n/a	2.50%
CWP target cash endow ment	surrender	n/a	n/a	n/a	2.50%
UWP savings endow ment	surrender	n/a	n/a	n/a	n/a
UWP target cash endow ment	surrender	n/a	n/a	n/a	n/a
UWP bond	surrender	n/a	n/a	7.00%	7.00%
UWP bond	automatic w ithdraw als	100% of current	100% of current	100% of current	100% of current
CWP pension regular premium	PUP	0.00%	0.00%	0.00%	0.00%
CWP pension regular premium	surrender	1.50%	1.50%	1.50%	1.50%
CWP pension single premium	surrender	1.50%	1.50%	1.50%	1.50%
UWP indiv pension regular premium	PUP	n/a	n/a	n/a	n/a
UWP indiv pension regular premium	surrender	3.50%	3.50%	3.50%	3.50%
UWP indiv pension single premium	surrender	3.50%	3.50%	3.50%	3.50%

For UWP business we make no allowance for future premiums, so the PUP rate is not applicable.

UWP endowment business is not modelled as the amount of business is not material.

Mortality Assumptions

Mortality assumptions for the Realistic Balance sheet are generally best-estimate.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

Annuitant Mortality

For all immediate annuities and deferred annuities in payment we use the following annuitant mortality basis:

	31/12/2014
Males	104.5% PCMA00 with CMI_2013_M(1.75%) improvement factors, applicable from 2001
Females	99.5% PCFA00 with CMI_2013_F(1.5%) improvement factors, applicable from 2001

Guaranteed Annuity Option take-up rate

An initial take-up rate of 83% for ex CGNU and 83% for ex CULAC has been assumed in respect of Guaranteed Annuity options attaching to pensions.

A fixed take up rate is assumed irrespective of how in the money the option is.

The member's chosen normal retirement age has been used to determine the value of the Guaranteed Annuity Option.

Deferred Annuity with cash option

The ex CGNU SEDA business with a guaranteed cash option is modelled stochastically with a 100% take-up rate in simulations where the cash option is more valuable than the secured annuity amount.

(7) **Policyholder Actions**

Policyholder actions are covered by the static persistency and GAO take-up rates in the previous section, together with a dynamic overlay for certain classes of business. There is dynamic linking of policyholder behaviour in respect of no-MVR, Inflation-protection and 'money-back' guarantees for certain classes of business.

7. Financing Costs

There are no financing costs.

8. Other long-term insurance liabilities

No liability is held in respect of any other liabilities related to treating customers fairly.

Any other long-term insurance liabilities

In NWPSF, the product split gives a breakdown of the asset in respect of the Shareholder transfers expected to be charged to Asset Shares. Following a board decision in 2014, no future transfers will be paid to the Shareholder Fund from this fund. This figure also includes the Shareholder transfers expected to be received from OWPSF, WPSF and PMSF (-£443m in NWPSF).

In OWPSF, the product split gives a breakdown of the liability in respect of the difference between Shareholder Transfers expected to be paid to NWPSF, and Shareholder transfers expected to be charged to Asset Shares (£37m in OWPSF).

A credit of £287m (NWPSF) and £40m (OWPSF) is held in respect of the difference between the present values of charges to be deducted from UWP asset shares on a charges basis compared to the future renewal expenses. This credit implicitly includes an allowance for recovery of initial expenses already incurred on this business.

 \pm 52m (NWPSF) and \pm 13m (OWPSF) is held to cover the cost of future expenses not charged to asset shares.

£15m (NWPSF) and £2m (OWPSF) is included in respect of other liabilities including future pension transfer review costs, funding for the Aviva staff pension scheme deficit, investigation and redress of mortgage endowment mis-selling complaints.

9. Realistic current liabilities

The realistic current liabilities include the following:

- Outstanding claims
- Creditors arising out of direct insurance business
- Amounts owed to credit institutions
- Creditors in relation to current tax liabilities
- Other creditors
- Accruals and deferred income
- Creditors arising out of reinsurance business

The realistic current liabilities at 31 December 2014 are £2,615m in NWPSF and £121m in OWPSF.

The realistic current liabilities are £12m lower than the regulatory liabilities in NWPSF and £1m lower than the regulatory liabilities in OWPSF. This reflects taking partial credit for assumed future income and capital gains for which tax due can be offset against an existing deferred tax asset.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Aviva Life & Pensions UK Ltd - New/Old With-Profits Sub-Funds Name of insurer **Global business** 31 December 2014 Financial year ended

10. Risk Capital Margin

(1)

Fund	RCM (£m)	
NWPSF	245.9	
OWPSF	47.6	

(a)

Changes in asset values under stress scenarios for equities and real estate (property) for (i) NWPSF and OWPSF

Asset Class	Change in market values
UK Equities	20.00%
OS Equities	25.30%
Property	12.50%

The overseas equity change is set such that it has the same probability as UK equities changing by 20%.

A rise in market values of equity and property is more onerous than a fall in market values for both NWPSF and OWPSF.

(ii)

Asset Class	Rise in Fl yields	Fall in Fl yields
Nominal change in yields	+38bps	-38bps
long-term yield – level post-stress	2.57%	1.81%
long-term yield - % movement post-stress	+17.50%	-17.50%

For both NWPSF and OWPSF, the fall in fixed-interest yield scenario is more onerous.

(iii)

Fund	Average Increase in credit spread – excluding Approved stock	Change in Fl asset value – excluding Approved stock
NWPSF	0.94%	-2.55%
OWPSF	0.93%	-3.57%

The average increase in credit spread is weighted by current market value of fixed interest.

The change in FI asset values is from the increase in credit spreads from the credit-risk test.

In the credit risk scenario the credit default swaps held in the funds are assumed to increase by £6.6m in NWPSF and by £0.5m in OWPSF. This includes a margin for prudence.

(iv) For the persistency test a 32.5% decrease in lapse rates is tested as this increases the fund's exposure to maturity guarantees.

% increase in realistic liabilities for NWPSF =	0.56%
% increase in realistic liabilities for OWPSF =	0.81%

(v) Not applicable

(b) Management Actions under the stress tests

- No changes in management actions or to any other assumptions are assumed to be made (i) under the stress tests.
- (ii) Not applicable.

Abstract of valuation report for realistic valuation - IPRU (INS) Appendix 9.4A

Name of insurer	Aviva Life & Pensions UK Ltd – New/Old With-Profits Sub-Funds
Global business	
Financial year ended	31 December 2014

- (iii) The same investment management rules governing any change in asset mix of the fund have been used for the projection of assets in the stress tests as in the central scenario.
- (iv) Under the stress tests the guarantee charges are assumed to be unchanged.

(c) Assets backing Risk Capital Margin

(i) The assets hypothecated to back the risk capital margin are set out in the following table.

NWPSF Assets backing RCM	£m	%
UK equities	-	0.00%
Overseas equities	-	0.00%
Land and buildings	-	0.00%
Approved fixed interest securities	-	0.00%
Other fixed interest securities	-	0.00%
All other assets	245.9	100.00%
Total	245.9	100.00%

All assets backing the New With-Profits Sub-Fund RCM are physically held within NWPSF.

However, for the purpose of presentation, and surplus assets are notionally transferred to the Reattributed Inherited Estate External Support Account (RIEESA) which forms part of

Non-Profit Sub-Fund 1. These assets are then available to back the RCM of NWPSF.

OWPSF Assets backing RCM	£m	%
UK equities	-	0.00%
Overseas equities	-	0.00%
Land and buildings	-	0.00%
Approved fixed interest securities	47.6	100.00%
Other fixed interest securities	-	0.00%
All other assets	-	0.00%
Total	47.6	100.00%

All assets backing the Old With-Profits Sub-Fund RCM are within the Old With-Profits Sub-Fund.

(ii) Not applicable.

11. Tax

(1) Tax treatment in the with-profits benefit reserves

Asset shares are credited with net of tax investment returns allowing for actual tax rates.

NWPSF/OWPSF	2014
	%
Income tax	20
Capital gains tax	20
Franked income tax	-
Withholding tax	15

Capital gain tax is charged or relief credited, on unrealised gains or losses in each period allowing for the probability of the charge or relief materialising in future. A probability of 45% is assumed for 2014, this leads to a notional tax charge/credit of 9%.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd - New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

(2) Tax treatment in future policy related liabilities

The following tax rates have been used in the future for all projections:

Corporation Tax	20%
Income Tax	20%
Capital Gains Tax	20%
Franked Income Tax	0%
Withholding Tax	15%

The corporate tax rate is set at 20% in respect of payments from 2015 onwards, the rate will apply from April 2015. No allowance is made for possible further reductions in this rate in future.

For asset share projections in the stochastic model, capital gains tax is levied on gains in each future period at 20% in simulations where there are sufficient cumulative indexed gains.

(3) Tax treatment in the realistic current liabilities

In the realistic regime allowance for deferred tax assets is made. The credit in relation to capital losses is reduced to allow for the probability of no future value being obtained for those capital losses. Discounting is applied for deferral of tax on deemed disposals on OEICs and any acquisition expense elements of the tax asset.

In the regulatory regime no allowance is made for deferred tax assets.

12. Derivatives

Security	NWPSF Exposure at 31/12/2014	OWPSF Exposure at 31/12/2014
	£m	£m
Futures on Bonds - short term trading derivatives	92	(3)
Futures on Equities - short term trading derivatives	1,219	231
Currency Futures	1,162	155
Property Futures	(252)	(46)
Inflation Rate Sw aps - pay fixed/receive floating	2,489	283
Inflation Rate Sw aps - pay floating/receive fixed	628	35
Inflation Rate Sw aps - pay floating/receive floating	4,265	447
Interest Rate Sw aps - pay fixed/receive floating	2,002	487
Interest Rate Sw aps - pay floating/receive fixed	7,574	906
Credit Default Sw aps	(334)	(27)
Total Return Sw aps - pay bonds receive libor	(316)	(32)
Total Return Sw aps - pay libor receive bonds	0	0
Equity Options	1,574	210

Futures are used either as part of Aviva Life & Pensions UK Limited portfolio management strategy or for risk mitigation strategies. The majority of futures these expire no later than 31 March 2015.

The Interest Rate and Inflation Swaps are primarily used for risk mitigation strategies and more specifically used as a partial hedge of the Guaranteed Annuity Option liability.

The Credit Default Swaps are used to manage bond spread and default risk within the fund.

The swap exposures figures are shown as gross counterparty exposure and do not allow for the offset of individual contracts against one another. The Equity Options are used to manage equity exposure within the fund.

Abstract of valuation report for realistic valuation – IPRU (INS) Appendix 9.4A

Name of insurerAviva Life & Pensions UK Ltd – New/Old With-Profits Sub-FundsGlobal businessFinancial year ended31 December 2014

13. Analysis of working capital

		NWPSF £m	OWPSF £m
Note	Working capital at 31/12/2013	0	359
	1 Investment return on opening working capital and profits on assets backing liabilitie	45	3
	2 Economic assumption changes	(180)	(6)
	3 Non-economic assumption changes	15	1
	4 Policyholder action assumption changes	(10)	(7)
	5 Other experience variances	(45)	(19)
	6 Modelling changes and opening adjustments	21	3
	7 Miscellaneous liabilities	11	3
	8 Management actions	1,202	(87)
	9 Transfer to RIEESA	(1,059)	
	Working capital at 31/12/2014	0	250

Notes:

- The profits on assets backing liabilities includes the release of time value in guarantees, the impacts
 of assets backing guarantee costs moving adversely relative to the cost of the guarantees and
 unwind of the discount rate used for calculating guarantee costs. There is also a positive impact
 from assets backing non-profit liabilities increasing by more than the liabilities.
 In OWPSF it has not been possible to split return on working capital and return on guarantee costs
 so this has also been included in this line of the analysis.
- 2. The economic assumption impact in is mainly driven by changes to bond yields and a reduction in NP liquidity premium.
- 3. Non-economic assumption changes include a weakening of annuitant mortality rates and an increase in investment expense assumptions.
- 4. The policyholder assumption change relates to a change in lapse rates on bonds and endowments.
- 5. Experience variance includes the impact of mortality, persistency longevity, expenses and new business.
- 6. Modelling changes and opening adjustments include:
 - A profit from a release of reserves after a full review of asset share calculations in the deterministic model
 - A profit from release of reserves after investigation of data used for deferred annuity reserves
 - A profit from one-off corrections in the accounts
 - A profit from introducing new functionality to refine the modelling of guarantees linked to inflation
 - A loss from an improvement to the methodology in calculating the fair value of bespoke assets
- 7. Miscellaneous liabilities consist of changes in provisions for future expected outgo, including Product Governance provisions.
- 8. Management actions include the following for NWPSF:
 - The impact of transferring the liabilities formerly in the RIEESA into NWPSF
 - The impact of retaining all future shareholder transfers arising from NWPSF
 - The impact of the redirection of shareholder interest in OWPSF, WPSF and PM
 - The management action for OWPSF reflects the planned distribution of the estate.
- 9. The resulting surplus or deficit in New With-Profits Sub-Fund is zeroised by way of an inter-fund balance transfer to/from the RIEESA.
- 10. Note that the change in other liabilities from Form 19 line 47 is included in the analysis above.
- 11. The change in working capital arising purely from the change in Form 19 line 51 cannot be quantified.

Statement on derivatives required by IPRU (INS) 9.29

Name of insurer Aviva UK Life & Pensions Limited

Global business

Financial year ended **31st December 2014**

The following summarises investment policy for the use of derivatives: -

- Derivatives will only be used in accordance with PRA Guidelines for the purpose of efficient portfolio management or reduction in investment risk.
- Derivatives must not be used for speculative purposes.
- Derivatives must be fully covered by the assets of the fund and must not be used to 'gear up' a fund.
- Counterparty risk for exchange traded contracts, the exchange must be classed as "regulated" by an investment committee. Over the counter contracts, transactions must only be transacted with approved counterparties.
- Counterparty limits are consistent, and monitored in line with the fund's aggregate exposure guidelines.
- Controls and Monitoring delegated authorities exist for each member of staff using derivatives. Derivatives transactions are priced, settled and profit and losses reconciled in an area independent of the fund managers involved.

The speculative use of derivative contracts is prohibited.

There are no specific guidelines for the use of contracts that were not reasonably likely to be exercised at the start of the contract. The company was party to Stock Underwriting over the financial year, which falls into the description above. This was the only example of such contracts that was transacted during the financial period. However, none of the amounts recorded in Form 13 would have been materially changed if the insurer became obligated to purchase these assets

No derivative contracts were held at any time during the financial year that required a significant provision under INSPRU 3.2.17R, and where appropriate, all contracts held fell within the definition of a permitted derivative contract.

During the financial period, the company's use of derivatives included the granting of rights under derivative contracts for a fixed consideration. This was in the activity of Stock Underwriting. The fee income over the financial year was £89,559.

Statement of information on the with-profits actuary required by IPRU (INS) 9.36				
Name of insurer	Aviva Life & Pensions UK Limited			
Global Business				
Financial year ended	31st December 2014			

In accordance with rule 9.36 of the Interim Prudential Sourcebook for Insurers, N M Rowley was requested to furnish and has provided the following information:

(a) (1) The actuary holds an interest in 78,279 ordinary shares in Aviva Plc at 31 December 2014 (2013: 84,646). The actuary is a member of the Money Purchase Section of the Aviva Staff Pension Scheme and has preserved benefits in the Final Salary Section.

(2) In March 2014, 12,283 shares held in Executive Share Plans (the Annual Bonus Plan and Long Term incentive Plan) were released and were sold. Also in March 2014, 7,492 shares in the Long Term Incentive Plan lapsed. In August 2014, options for 4,277 shares in the Aviva Executive Share Option Plan expired.

- (b) The actuary has no policies of insurance with the Companies. He is one of a number of beneficiaries under a trust: the property of which comprises a life insurance policy issued by Aviva Life & Pensions UK Limited for which total premiums of £265 were paid in the year to 31 December 2014 (2013: £265).
- (c) The aggregate amount of remuneration, bonuses and the value of other benefits (excluding pension rights) under the actuary's contract of employment with Aviva Employment Services Limited for the year to 31 December 2014 was £280,573 (2013: £277,489). Under the contract he was the Withprofits actuary of Aviva Life & Pensions UK Limited.

The particulars of this statement were furnished to the company by Mr N M Rowley at the Company's request.

Certificate by the directors required by IPRU (INS) 9.34(1) and IPRU (INS) Appendix 9.6

Name of insurer Aviva Life & Pensions UK Limited

Global business

Financial year ended **31st December 2014**

We certify that:

- 1 (a) the return has been properly prepared in accordance with the requirements in IPRU(INS), GENPRU and INSPRU; and
 - (b) the directors are satisfied that:
 - (i) throughout the financial year in question, the insurer has complied in all material respects with the requirements in SYSC and PRIN as well as the provisions of IPRU(INS), GENPRU and INSPRU; and
 - (ii) it is reasonable to believe that the insurer has continued so to comply subsequently, and will continue so to comply in future.
- 2 (a) in the directors' opinion, premiums for contracts entered into during the financial year and the resulting income earned are sufficient, under reasonable actuarial methods and assumptions, and taking into account the other financial resources of the insurer that are available for the purpose, to enable the insurer to meet its obligations in respect of those contracts and, in particular, to establish adequate mathematical reserves;
 - (b) the sum of the mathematical reserves and the deposits received from reinsurers as shown in Form 14, constitute proper provision at the end of the financial year in question for the long-term insurance liabilities (including all liabilities arising from deposit back arrangements, but excluding other liabilities which had fallen due before the end of the financial year) including any increase in those liabilities arising from a distribution of surplus as a result of an actuarial investigation as at that date into the financial condition of the long-term insurance business;
 - (c) the with-profits funds have been managed in accordance with the Principles and Practices of Financial Management, as established, maintained and recorded under COBS 20.3; and
 - (d) the directors have, in preparing the return, taken and paid due regard to:
 - (i) advice from every actuary appointed by the insurer to perform the actuarial function in accordance with SUP 4.3.13R; and
 - (ii) advice from every actuary appointed by the insurer to perform the with-profits actuary function in accordance with SUP 4.3.16AR of the FCA Handbook and SUP 4.3.16R of the PRA Handbook.

Independent auditor's report to the directors pursuant to rule 9.35 of the Interim Prudential Sourcebook for Insurers

Name of insurer	Aviva Life & Pensions UK Limited
Global Business	
Financial year ended	31st December 2014

We have audited the following documents prepared by the insurer pursuant to the Accounts and Statements Rules set out in Part I and Part IV of Chapter 9 to IPRU(INS) the Interim Prudential Sourcebook for Insurers, GENPRU the General Prudential Sourcebook and INSPRU the Prudential Sourcebook for Insurers ('the Rules') made by the Financial Services Authority under section 137G of the Financial Services and Markets Act 2000:

- Forms 2, 3, 11 to 19, 40 to 45, 48, 49, 58 and 60, (including the supplementary notes) ('the Forms');
- the statement required by IPRU(INS) rule 9.29 ('the statement'); and
- the valuation reports required by INSPRU rule 1.3 and IPRU(INS) 9.31 ('the valuation reports');.

We are not required to audit and do not express an opinion on:

- Forms 46, 47, 50 to 55, 57, 59A and 59B (including the supplementary notes);
- the statements required by IPRU(INS) rules 9.30 and 9.36; and
- the certificate required by IPRU(INS) rule 9.34(1).

Respective responsibilities of the insurer and its auditors

The insurer is responsible for the preparation of an annual return (including the Forms, the statement and the valuation report) under the provisions of the Rules. The requirements of the Rules have been modified by a direction issued under section 138A of the Financial Services and Markets Act 2000 on 23 December 2013. Under IPRU(INS) rule 9.11 the Forms, the statement and the valuation reports are required to be prepared in the manner specified by the Rules and to state fairly the information provided on the basis required by the Rules. The methods and assumptions determined by the insurer and used to perform the actuarial investigation as set out in the valuation reports are required to reflect appropriately the requirements of INSPRU 1.2 and 1.3.

It is our responsibility to form an independent opinion as to whether the Forms, the statement and the valuation report meet these requirements, and to report our opinion to you. We also report to you if, in our opinion:

- adequate accounting records have not been kept, or returns adequate for our audit have not been received from branches not visited by us; or
- the Forms, the statement and the valuation report are not in agreement with the accounting records and returns; or
- we have not received all the information we require for our audit.

This report has been prepared for the directors of the insurer to comply with their obligations under IPRU(INS) rule 9.35 and for no other purpose. We do not, in providing this report, accept or assume responsibility for any other purpose save where expressly agreed by our prior consent in writing.

Basis of opinion

We conducted our work in accordance with Practice Note 20 'The audit of insurers in the United Kingdom (Revised)' issued by the Auditing Practices Board. Our work included examination, on a test basis, of evidence relevant to the amounts and disclosures in the Forms, the statement and the valuation reports. The evidence included that previously obtained by us relating to the audit of the financial statements of the insurer for the financial year. It also included an assessment of the significant estimates and judgements made by the insurer in the preparation of the Forms, the statement and the valuation reports.

We planned and performed our work so as to obtain all the information and explanations which we considered necessary in order to provide us with sufficient evidence to give reasonable assurance that the Forms, the statement and the valuation reports are free from material misstatement, whether caused by fraud or other irregularity or error and comply with IPRU(INS) rule 9.11.

In accordance with IPRU(INS) rule 9.35(1A), to the extent that any document, Form, statement, analysis or report to be examined under IPRU(INS) rule 9.35(1) contains amounts or information abstracted from the actuarial investigation performed pursuant to IPRU(INS) rule 9.4, we have obtained and paid due regard to advice from a suitably qualified actuary who is independent of the insurer.

Independent auditor's report to the directors pursuant to rule 9.35 of the Interim Prudential Sourcebook for Insurers

Name of insurerAviva Life & Pensions UK LimitedGlobal Business31st December 2014

Opinion

In our opinion:

(i) the Forms, the statement and the valuation report fairly state the information provided on the basis required by the Rules as modified and have been properly prepared in accordance with the provisions of those Rules; and

(ii) the methods and assumptions determined by the insurer and used to perform the actuarial investigation as set out in the valuation report appropriately reflect the requirements of INSPRU 1.2 and 1.3.

PricewaterhouseCoopers LLP Chartered Accountants

March 2015

The maintenance and integrity of the Aviva plc website is the responsibility of the directors; the work carried out by the auditors does not involve consideration of these matters and, accordingly, the auditors accept no responsibility for any changes that may have occurred to the insurance annual return since they were initially presented on the website.

Legislation in the United Kingdom governing the preparation and dissemination of insurance annual returns may differ from legislation in other jurisdictions.
