

Aviva Investors AIMS Target Return Fund - SICAV²

FUND IN BRIEF: A GUIDE FOR INVESTMENT PROFESSIONALS

Investor benefits

The end of easy monetary policy has challenged many investors relying on traditional means to diversify their equity market risk. AIMS Target Return, with its ability to access non-traditional markets and volatility managed outcome-based approach, is designed to work across all market cycles.

Capital growth over the long term: Targets annual investment performance of five per cent¹ over the European Central Banks deposit rate.²

Minimising volatility: Aims to help stabilise an overall investor's portfolio by managing fund volatility to a target of less than half that of global equities over a rolling three-year period.

Low sensitivity to equities: Seeks to help investors diversify their portfolios, generating returns that are less dependent on directional equities, bonds and other traditional asset classes.

Why AIMS Target Return?

- **Connected thinking:** A firm-wide approach, not just a team. We take advantage of the full breadth of Aviva Investors' return generating capabilities within Multi-asset & Macro, Equities, Credit, Real Assets and ESG.
- **Unconstrained approach:** Harnessing a broad macro, thematic and idiosyncratic opportunity set, across and within asset classes. We go beyond directional equities and credit for greater risk diversification and better precision in implementing an investment idea.
- **Robust portfolio construction:** Focus on capital preservation to generate absolute returns across market cycles.

Resilience in a Multi-Strategy approach

Embedding diversification and resilience is a key area of focus in our AIMS investment process. The Fund is composed of 20-30 diversified strategies, with a two-to-three year investment horizon that can take both long and short views across nine risk drivers categorised into one of the following three groups:

MARKET RETURNS

Dynamic allocation to equity, credit, emerging markets; enhancing risk adjusted returns through targeted derivative overlays

OPPORTUNISTIC RETURNS

Macro and idiosyncratic investment themes that exhibit market mispricing and/or lower market correlation e.g., equity or fixed income relative value

RISK-REDUCING RETURNS

Aims to protect the portfolio in times of market stress through discretionary and quantitative hedging strategies in addition to conventional duration

1. Objective based on the European Central Bank deposit rate, annualised on a rolling 3 year basis, before charges.

2. A sub-fund of Aviva Investors SICAV, a Luxembourg domiciled UCITS fund incorporates as a Société d'Investissement à Capital Variable ("SICAV").

Key risks

The value of an investment can go down as well as up and can fluctuate in response to changes in currency and exchange rates. Investors may not get back the original amount invested.

The Fund uses derivatives; these can be complex and highly volatile. This means in unusual market conditions the Fund may suffer significant losses.

Certain assets held in the Fund could be hard to value or to sell at a desired time or at a price considered to be fair (especially in large quantities), and as a result their prices could be very volatile.
