AVIVA INVESTORS UK EQUITY FUND

INVESTMENT OBJECTIVE

Long term capital appreciation and income.

INVESTMENT POLICY

Diversified investment within the UK equity market. Individual security selections will be based on price and long term total return prospects.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 4.52 per cent (share class A), net of fees, compared with an average return of 1.10 per cent for its peer group, the Investment Association UK All Companies sector. The FTSE® All-Share Index, the Fund's benchmark, returned 1.86 per cent.

Stakes in Sage, Intermediate Capital, Compass and Fevertree helped relative performance. Accounting software firm Sage confirmed it was on track to meet 2015 revenue targets. Intermediate Capital Group is an alternative asset manager operating in niche areas of the European credit market, benefiting as institutional investors seek higher yielding alternatives to traditional fixed income investments. Annual results from catering group Compass highlighted the strength of its North American business. Fevertree is an expanding producer of premium tonic water, adding Marks & Spencer, British Airways and EasyJet to its list of customers in recent months. Detractors included tool hire company Ashtead, after a US competitor reported deteriorating trading conditions. However, we believe Ashtead can continue to gain market share.

At the sector level, a cautious approach to investing in banks was beneficial as share prices weakened on concerns about non-performing loans. The Fund's avoidance of Barclays and Asia-focused Standard Chartered helped performance. In contrast, limited exposure to consumer staples was detrimental because the sector outperformed, as it often does during periods of market turbulence.

AVIVA INVESTORS UK EQUITY FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

We exited our positions in Restaurant Group, Majestic Wine and Stagecoach, and established a new holding in Royal Dutch Shell. We believe trading conditions for Restaurant Group could well deteriorate in response to competitive pressures and a higher national minimum wage. Lower petrol costs are squeezing Stagecoach's regional bus business, causing passengers to migrate back to car usage. Royal Dutch Shell is embarking on an extensive cost cutting programme following the acquisition of BG Group, which in our view should generate sufficient cash flow to cover dividend payments over the near term.

With equity markets having been volatile in recent months, we believe there are attractive long-term opportunities for investors. However, we acknowledge there are sizeable risks at present, notably political uncertainty in the UK with the forthcoming European Union referendum, and the risk that the economic slowdown in China could accelerate and begin spreading elsewhere.

April 2016

The value of an investment in the Aviva Investors UK Equity Fund and any revenue from it can go down as well as up. You may not get back the original amount invested. Past performance is not a guide to future performance.

AVIVA INVESTORS UK EQUITY INCOME FUND

INVESTMENT OBJECTIVE

A dividend yield above that obtainable on the FTSE® All-Share Index.

INVESTMENT POLICY

Investment principally in UK equities judged to offer high yield, above average prospects of dividend growth and long term capital growth.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. The level of targeted income is not guaranteed and may not be achieved.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 3.90 per cent (share class A), net of fees, compared with an average return of 1.88 per cent for its peer group the Investment Association UK Equity Income sector. The FTSE® All-Share Index, the Fund's benchmark, returned 1.86 per cent.

The Fund's holdings in Sage, Intermediate Capital Group and KCOM Group were among the largest individual contributors to relative performance. Accountancy software group Sage confirmed it was on track to meet 2015 revenue targets. Intermediate Capital Group is an alternative asset manager operating in niche areas of the European credit market, benefitting as institutional investors seek higher yielding alternatives to traditional fixed income investments. Telecom group KCOM is a beneficiary of growing demand for high-speed fibre broadband. The company's share price rose sharply after KCOM announced the sale of the bulk of its assets, outside of Hull and East Yorkshire, in a £90 million deal with CityFibre Infrastructure. Detractors included defence specialist Cobham, after the company issued a profits warning due to a slowdown in its satellite and radio communications businesses.

At the sector level, a cautious approach to investing in banks was beneficial as share prices weakened on concerns about non-performing loans. The Fund's avoidance of Barclays, RBS and Asia-focused Standard Chartered helped performance. In contrast, limited exposure to consumer staples was detrimental because the sector outperformed, as it often does during periods of market turbulence.

AVIVA INVESTORS UK EQUITY INCOME FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

During the review period, we exited our position in Majestic Wine and took up a holding in asset manager Schroders. Following a period of strong performance, we consider Majestic Wine is unlikely to deliver sufficient returns to justify its current valuation. In contrast, Schroders' share price had sold off, which presented us with an attractive entry point as the company has a strong balance sheet with opportunities for long-term growth given the recent pension reforms.

With equity markets having been volatile in recent months, we believe there are attractive long-term opportunities for investors. However, we acknowledge there are sizeable risks at present, notably political uncertainty in the UK with the forthcoming European Union referendum, and the risk that the economic slowdown in China could accelerate and begin spreading elsewhere.

The value of an investment in the Aviva Investors UK Equity Income Fund and any revenue from it can go down as well as up. You may not get back the original amount invested. Past performance is not a guide to future performance.

AVIVA INVESTORS UK GROWTH FUND

INVESTMENT OBJECTIVE

Long term capital appreciation.

INVESTMENT POLICY

Investment principally in UK equities based on price and prospects of above average earnings growth.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 1.50 per cent (share class A), net of fees, compared with an average return of 1.10 per cent for its peer group the Investment Association UK All-Companies sector. The FTSE® All-Share Index, the Fund's benchmark, returned 1.86 per cent.

The Fund's lack of exposure to consumer staples was detrimental because the sector outperformed as investors became more risk averse, with equities enduring a turbulent start to 2016. This was partially offset by limited exposure to UK banks, which weakened on concerns over increased provisions for mis-sold payment protection insurance. Holdings in Ashtead and Sepura detracted. Tool hire company Ashtead weakened after a US competitor reported deteriorating trading conditions. We believe Ashtead's underperformance is overdone. Sepura, the global handset communications provider, issued a profit warning ahead of its annual results. Although concerns over the company's balance sheet may affect the shares in the short term, we believe Sepura's TETRA (terrestrial trunked radio) technology looks well placed to become the dominant standard in digital handsets.

Holdings in Sanne Group and Pinewood performed well. Maiden annual results from outsourcing group Sanne, which provides fund administration services, exceeded forecasts while a recent acquisition provides a foothold in the South African hedge fund market. Studio services provider Pinewood posted encouraging results while management are considering the sale of the company, along with other options to maximise shareholder value.

AVIVA INVESTORS UK GROWTH FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

New positions included funeral-services provider Dignity and kitchen manufacturer Howden Joinery, and a new listing, house builder Countryside. We sold the Fund's holding in AA in anticipation of a rise in insurance premium tax, subsequently announced in the March budget. We reduced holdings in Fevertree, Rentokil and Booker after a period of strong performance.

Markets remain preoccupied by a range of downside risks including a US recession, EU banks' balance sheets, and stalling growth in China. We anticipate further volatility ahead of the June EU referendum, and favour companies that can deliver self-generated growth despite macroeconomic conditions.

April 2016

Synthetic Risk and Reward Indicator

The Fund has been allocated a risk number based on the historic volatility of its share price. Where insufficient share price information is available, the risk number has been based on the historic volatility of the asset classes appropriate to the Fund.

- This indicator is based on historical data, calculated using European Union rules, and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean 'risk free'.
- Full information on the risks applicable to the Fund is detailed in the Prospectus.

AVIVA INVESTORS UK INDEX TRACKING FUND

INVESTMENT OBJECTIVE

To track the total return (after charges) of the FTSE® All-Share Index.

INVESTMENT POLICY

To hold all the stocks and in the same proportion as in the FTSE® All-Share Index except where prevented by the Financial Conduct Authority regulations.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund (share class 1) delivered a total return of 1.36 per cent net of fees. The FTSE® All-Share Index, the Fund's benchmark, returned 1.86 per cent. The sector average return generated by the Fund's peer group, the Investment Association UK All-Companies sector was 1.10 per cent.

Although UK economic indicators have remained broadly positive, the UK equity market has largely taken its cue from international developments during the review period, particularly concerns over the economic outlook for China and further weakness in commodity markets. The market rallied from heavy losses during the opening weeks of 2016 to record a modest gain. The performance of major oil producers and mining stocks has mirrored fluctuations in commodity prices, with the oil price plummeting to below \$30/barrel - its lowest level since 2004 in February - before rebounding as the review period drew to a close. Major banking stocks lost ground on political uncertainty ahead of the forthcoming EU referendum in June, and concerns over an increase in provisions for non-performing loans.

In contrast, the technology and telecoms sectors performed relatively well, as did consumer staples and healthcare stocks, both sectors which can offer relatively predictable earnings streams. In the IT sector, chip designer ARM Holdings continues to post strong revenue growth as its processors power a broad range of devices, from the smartphone and tablet markets to smart meters and car computers. Among telecoms, BT received approval from the Competition and Markets Authority for its £12.5 billion takeover of mobile giant EE, while Vodafone announced plans to merge its Dutch operations with those of US cable operator Liberty Global, a deal which investors believe may herald further tie-ups between the two companies in the UK and Germany.

AVIVA INVESTORS UK INDEX TRACKING FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

With equity markets having been volatile in recent months, we believe there are attractive opportunities for investors prepared to take a long-term view. However, there are sizeable risks in the near term, notably political uncertainty in view of the forthcoming UK referendum on membership of the European Union, and from a global perspective the risk that the economic slowdown in China could accelerate.

AVIVA INVESTORS UK SMALLER COMPANIES FUND

INVESTMENT OBJECTIVE

Long term capital appreciation.

INVESTMENT POLICY

Investment principally in smaller capitalisation UK equities judged to offer prospects of above average earnings growth.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The Fund will invest in smaller companies listed on the UK equity market. Smaller companies are less liquid than larger companies which means that their share price may be more volatile. Movements in the UK equity market will affect Fund performance.

FUND MANAGER'S REPORT

The Fund delivered a total return of -0.15 per cent (share class 1), net of fees, compared with an average return of 0.44 per cent for its peer group the Investment Association UK Smaller Companies sector. The FTSE®Small Cap ex IT Index, the Fund's benchmark, returned -0.04 per cent.

Holdings in telecom stocks detracted from performance. The People's Operator, a mobile network provider, flagged issues with its US launch, which has pushed back the company's projected breakeven date. We view this as essentially a timing issue and remain positive on the company's earnings outlook. City Fibre Infrastructure's share price dropped as it financed the acquisition of telecom group KCOM's national fibre network, although we consider this acquisition has sound strategic and financial logic.

Holdings in Sanne Group, Fevertree and RPC Group performed well. Annual results from outsourcing group Sanne, which provides fund administration services, exceeded forecasts while a recent acquisition provides a foothold in South Africa's hedge fund market. Fevertree is a producer of premium tonic water and has generated strong sales growth, recently adding Marks & Spencer, British Airways and EasyJet to its list of customers. Shares in the plastic-packaging producer RPC Group rose after the company announced the acquisition of labelling business GCS, which should enhance revenue and earnings growth.

AVIVA INVESTORS UK SMALLER COMPANIES FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

In terms of transactions, we added to our holding in Sepura, which designs digital radios for the emergency services and the military, capitalising on share price weakness. We trimmed the holding in Gooch & Housego, a hi-tech precision photonics company, after a period of strong performance, while we sold our position in Software Radio Tech after the company won a valuable new contract and the share price rebounded.

Although equity markets have been volatile in recent months, we believe there are attractive opportunities in UK smaller companies for investors prepared to take a long-term view. In the near-term, political uncertainty is a concern with the forthcoming EU referendum. However, UK interest rates are likely to remain unchanged over 2016, and we continue to favour companies which should benefit from robust consumer spending.

AVIVA INVESTORS CASH FUND

INVESTMENT OBJECTIVE

To achieve an income combined with a high degree of capital security.

INVESTMENT POLICY

The Fund will invest primarily in short-term cash deposits, near cash and other money market instruments. In addition, the Fund may occasionally invest in transferable securities, units in collective investment schemes, and derivatives and forward transactions in order to achieve its objective.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. Money market investment values are affected by changes in interest rates, and the issuer's creditworthiness. If interest rates go up and or an issuer has their credit rating reduced, the value of the Fund's investments may fall, and vice versa. Whilst capital is relatively safe in a building society account, money market investments may fall in value, and you may get less back than the original amount you invested.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 0.17 per cent (share class 2), net of fees. The Fund's peer group, the Investment Association Money Market sector, delivered an average return of 0.14 per cent.

Sterling money market rates were broadly unchanged over the period as investors pared back expectations on the timing of the first UK interest rate hike while the outlook for the economy dimmed due to weaker international growth and turmoil in global financial markets. A date for the UK's referendum on European Union membership was announced and the Bank of England (BoE) reiterated its view that the run up to the vote could destabilise markets and the economy as it downgraded expectations for inflation, growth and wages. Policymakers also believe uncertainty about the referendum is likely to blame for the on-going decline in sterling. Inflation remained weak and extended the period during which it has been below the BoE's target of two per cent for over two years.

AVIVA INVESTORS CASH FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

Sterling money markets will be grappling with the uncertainty surrounding the UK referendum on EU membership. As 23 June approaches, markets will increasingly place more emphasis on the outcome of the vote. We agree with the BoE that companies will in the short-term hold off on spending and investment and that this might lead to a slowdown in growth. The bank has made clear that it stands at the ready to provide liquidity if the market reacts adversely to a 'Brexit'. In this case, there are a few risks that could have an impact on liquidity funds. There is the danger of a credit downgrade of both the UK and banks affected by potentially lower UK growth, which could reduce our investment universe. In the meantime, our portfolios will be biased towards longer duration securities as we expect longer-dated yields to fall as nervousness increases. We prefer to use higher-quality securities as opposed to higher-yielding, lower-quality issues to ensure liquidity is maintained. We continue to like debt issued by some of the Australian and Canadian banks from which recent issuance has been low.

Synthetic Risk and Reward Indicator

The Fund has been allocated a risk number based on the historic volatility of its share price. Where insufficient share price information is available, the risk number has been based on the historic volatility of the asset classes appropriate to the Fund.

- This indicator is based on historical data, calculated using European Union rules, and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean 'risk free'.
- Money market investment values are affected changes in interest rates, and the issuer's creditworthiness. If interest rates go up and or an issuer has their credit rating reduced, the value of the Fund's investments may fall, and vice versa. Whilst capital is relatively safe in a building society account, money market investments may fall in value, and you may get less back than the original amount you invested.
- Full information on the risks applicable to the Fund is detailed in the Prospectus.

AVIVA INVESTORS CORPORATE BOND FUND

INVESTMENT OBJECTIVE

A long term total return above that available on UK Government securities.

INVESTMENT POLICY

Diversified investment in Sterling denominated debt securities issued by governments, supranational institutions and corporates.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 2.22 per cent (share class A), net of fees. The Fund's peer group, the Investment Association Sterling Corporate Bond sector, delivered an average return of 2.29 per cent.

Investment-grade sterling corporate bonds delivered positive returns after underlying government bonds rallied sharply as investors opted for safe-haven assets amid continually plunging oil prices and ongoing concerns about a slowdown in global growth. Gilt markets were further boosted after the Bank of England (BoE) said the UK economy was not yet strong enough to contemplate raising interest rates. Sterling credit spreads widened even though new supply was down significantly from last year. Investor appetite for riskier assets rose towards the end of the period however, after the European Central Bank (ECB) announced, among other measures, that it would expand its bond-buying programme to include corporate bonds. For its part, the BoE left interest rates unchanged while highlighting that political uncertainty ahead of the UK's referendum on EU membership could delay spending and depress domestic demand in the short-term.

AVIVA INVESTORS CORPORATE BOND FUND (CONTINUED)

**FUND MANAGER'S REPORT
(CONTINUED)**

Fund performance was broadly in line with that of its peer group. Holdings of Imperial Tobacco were especially beneficial as the company's limited exposure to emerging markets fuelled existing rumours that it could be a takeover target for other cigarette makers. A stake in the owners of the original Canary Wharf building, amid other properties, also enhanced returns after a court ruling prevented the company from calling their bonds at par, which lifted prices sharply in the aftermath. Positions in debt issued by Dutch banking group Rabobank furthered gains as the ECB sweetened incentives for banks to increase lending. Returns were also aided by holdings in highly-rated global resources company BHP Billiton as commodities staged an initial recovery. DirecTV also did well after bond prices rose to reflect the higher credit rating of its new parent company AT&T. Not owning German utility company RWE also helped as the company continues to decommission its nuclear power plants at a considerable cost. Newly-issued debt from Irish building group CRH performed exceptionally well as yield-hungry investors were keen to own the longer-dated bonds. Returns were undermined by exposure to the banking and insurance sectors which did poorly as fears of a global recession gripped investors.

The ECB's corporate bond buying should support credit markets in the short run; however we remain mindful of the potential consequences of unconventional monetary stimulus measures over the longer term. Low interest rates and cost-cutting have allowed companies to continue being profitable, but this can not carry on indefinitely. Some companies have taken to issuing debt to fund shareholder-friendly activities, and although the practice is less prevalent in Europe, it highlights the need for careful security selection. As fundamentally-driven investors, some modest volatility should uncover opportunities given that we maintain high-conviction, long-term positions. Sterling supply is likely to remain muted as companies take advantage of extremely low euro zone borrowing rates. Uncertainty generated in the run-up to the UK referendum will also likely dampen sterling issuance.

Synthetic Risk and Reward Indicator

The Fund has been allocated a risk number based on the historic volatility of its share price. Where insufficient share price information is available, the risk number has been based on the historic volatility of the asset classes appropriate to the Fund.

- This indicator is based on historical data, calculated using European Union rules, and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean 'risk free'.
- Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default.
- Full information on the risks applicable to the Fund is detailed in the Prospectus.

AVIVA INVESTORS DISTRIBUTION FUND

INVESTMENT OBJECTIVE

A high and growing level of income with prospects for long term capital appreciation.

INVESTMENT POLICY

Diversified investment in high yielding UK equities and UK fixed interest securities. Allocations to fixed interest securities, equities and cash will vary over time. Equity selections will be based on price and long term total return prospects.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default. The value of investments will be affected by changes in exchange rates.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 2.85 per cent (share class 1), net of fees, compared to an average return of 2.86 per cent for its peer group the Investment Association Mixed Investment 20-60% Shares sector.

In relation to the equity portion of the Fund, at the sector level, a cautious approach to investing in banks was beneficial as share prices were under pressure due to concerns about non-performing loans. Accordingly, avoidance of Barclays, RBS and Asia-focused Standard Chartered helped performance. This outweighed the detrimental impact of limited exposure to consumer staples, which outperformed as investors became more risk averse, particularly as equities endured a turbulent start to 2016.

Holdings in Sage and Intermediate Capital were key contributors. Accounting software firm Sage confirmed it was on track to meet 2015 revenue targets, while Intermediate Capital Group is an alternative asset manager benefiting from strong demand amongst institutional investors for higher yielding alternatives to traditional fixed income investments. As mining stocks rallied during March, following the stabilisation in metal prices, the portfolio's limited exposure to this sector, and its avoidance of Glencore, detracted from performance.

AVIVA INVESTORS DISTRIBUTION FUND (CONTINUED)

**FUND MANAGER'S REPORT
(CONTINUED)**

The bond portion of the Fund delivered positive returns as a rally in underlying government debt boosted corporate bonds. Credit markets were also bolstered after the European Central Bank (ECB) expanded its bond-buying programme to include corporate bonds, among other measures to stimulate growth and inflation. Holdings of Imperial Tobacco were especially beneficial to performance, as we believe the company's limited exposure to emerging markets fuelled existing rumours that it could be a takeover target for other cigarette makers. Positions in debt issued by Dutch banking group Rabobank furthered gains as the ECB sweetened incentives for banks to increase lending – effectively paying them to increase credit to households and companies – in efforts to get money circulating in the economy. Performance was undermined by exposure to the banking and insurance sectors which performed poorly as fears of a global recession gripped investors.

With equity markets having been volatile in recent months, we believe there are attractive long-term opportunities for investors. However, we acknowledge there are sizeable risks at present, notably political uncertainty in the UK with the forthcoming European Union referendum, and the risk that the economic slowdown in China could accelerate and begin spreading elsewhere.

The ECB's decision to buy corporate bonds should support credit markets in the short term, however we remain mindful of the potential consequences of unconventional monetary stimulus measures over the longer run. As fundamentally-driven investors, some modest volatility should uncover opportunities given that we maintain high-conviction, long-term positions.

April 2016

AVIVA INVESTORS HIGH YIELD BOND FUND

INVESTMENT OBJECTIVE

To maximise total return while generating a high level of income through investment in a diversified portfolio of fixed interest securities.

INVESTMENT POLICY

Diversified investment in high yield bonds but also other fixed income assets, such as government bonds and investment grade corporates.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

Note: At least 80 per cent of assets will either be in sterling or currency hedged back to sterling.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default. The value of investments will be affected by changes in exchange rates.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 2.65 per cent (share class 1) over the period, net of fees. The Fund's peer group, the Investment Association Sterling High Yield sector, generated an average return of 1.39 per cent.

European high-yield bonds delivered positive returns as investor appetite for riskier assets rose sharply after the European Central Bank (ECB) announced, among other measures, that it would expand its bond-buying programme to include corporate bonds. Bonds were also underpinned by constrained supply as companies held off from issuing new debt as market turbulence continued. However, in the first part of the period government bonds had rallied sharply as investors opted for safe-haven assets amid continually plunging oil prices and ongoing concerns about a slowdown in global growth. For its part, the Bank of England (BoE) left interest rates unchanged while highlighting that political uncertainty ahead of the UK's referendum on EU membership could delay spending and depress domestic demand in the short-term.

AVIVA INVESTORS HIGH YIELD BOND FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

Fund outperformance versus its peer group was partially due to its cautious positioning as economic turmoil roiled financial markets throughout the period. A lack of exposure to the worst-performing bonds, and especially those related to commodity and oil prices, particularly helped. Holdings in Germany's second largest cable operator Unitymedia, a subsidiary of Liberty Global, did particularly well as it continued to consolidate market share. A stake in Chemours, an American chemicals company which was spun off from DuPont was another outstanding performer after agreeing to sell its aniline chemical facility for approximately \$140 million in cash. A position in French telecommunications company Altice also contributed to returns as it announced plans for expansion into the US market and as the company successfully refinanced outstanding debt. Holdings in British fashion retailer NewLook ramped up fund gains further as the company benefitted from improvement in retail sales. Stakes in Italian carmaker Fiat also boosted performance, while a position in Schaeffler contributed to returns throughout the period after the German auto-parts supplier launched its initial public offering. Debt issued by Italian telecommunications firm Telecom Italia further bolstered gains as rumours emerged that it could be an acquisition target.

The ECB's corporate bond buying should support credit markets in the short run; however we remain mindful of the potential consequences of unconventional monetary stimulus measures over the longer term. Low interest rates and cost-cutting have allowed companies to continue being profitable, but this can not carry on indefinitely. Some companies have taken to issuing debt to fund shareholder-friendly activities, and although the practice is less prevalent in Europe, it highlights the need for careful security selection. As fundamentally-driven investors, some modest volatility should uncover opportunities given that we maintain high-conviction, long-term positions. Sterling supply is likely to remain muted as companies take advantage of extremely low euro zone borrowing rates. Uncertainty generated in the run-up to the UK referendum will also likely dampen sterling issuance.

Synthetic Risk and Reward Indicator

The Fund has been allocated a risk number based on the historic volatility of its share price. Where insufficient share price information is available, the risk number has been based on the historic volatility of the asset classes appropriate to the Fund.

- This indicator is based on historical data, calculated using European Union rules, and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean 'risk free'.
- Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default.
- The value of investments will be affected by changes in exchange rates.
- Full information on the risks applicable to the Fund is detailed in the Prospectus.

AVIVA INVESTORS HIGHER INCOME PLUS FUND

INVESTMENT OBJECTIVE

A high level of investment income.

INVESTMENT POLICY

Diversified investment in fixed interest securities issued by corporates, governments and supranational institutions. Investment is principally in Sterling denominated securities but the Fund may also invest in global securities issued in a variety of currencies.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default. The value of investments will be affected by changes in exchange rates.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 2.67 per cent (share class A), net of fees. The Fund's peer group, the Investment Association Sterling Strategic Bond sector generated an average return of 1.23 per cent.

Investment-grade sterling corporate bonds delivered positive returns after underlying government bonds rallied sharply as investors opted for safe-haven assets amid continually plunging oil prices and ongoing concerns about a slowdown in global growth. Gilt markets were further boosted after the Bank of England (BoE) said the UK economy was not yet strong enough to contemplate raising interest rates. Sterling credit spreads widened even though new supply was down from last year. Investor appetite for riskier assets rose towards the end of the period however, after the European Central Bank (ECB) announced, among other measures, that it would expand its bond-buying programme to include corporate bonds. For its part, the BoE left interest rates unchanged while highlighting that political uncertainty ahead of the UK's referendum on EU membership could delay spending and depress domestic demand in the short-term. European high-yield debt also registered positive returns alongside rising investor appetite for riskier assets.

AVIVA INVESTORS HIGHER INCOME PLUS FUND (CONTINUED)

**FUND MANAGER'S REPORT
(CONTINUED)**

Fund outperformance versus its peer group was partially due to its cautious positioning as economic turmoil roiled financial markets. Holdings of Imperial Tobacco were particularly beneficial as the company's limited exposure to emerging markets fuelled existing rumours that it could be a takeover target for other cigarette makers. Positions in debt issued by Dutch banking group Rabobank furthered gains as the ECB sweetened incentives for banks to increase lending. Holdings in Germany's second largest cable operator Unitymedia did particularly well as it continued to consolidate market share. A stake in Chemours, an American chemicals company which was spun off from DuPont was another outstanding performer after agreeing to sell its aniline chemical facility for approximately \$140 million in cash. A position in French telecommunications company Altice also contributed to returns as it announced plans for expansion into the US market and as the company successfully refinanced outstanding debt. Holdings in British fashion retailer NewLook ramped up fund gains further as the company benefitted from improvement in retail sales. Debt issued by Italian telecommunications firm Telecom Italia further bolstered gains as rumours emerged it could be an acquisition target. Returns were undermined by exposure to the banking and insurance sectors which did poorly as fears of a global recession gripped investors.

The ECB's corporate bond buying should support credit markets in the short term; however we remain mindful of the potential consequences of unconventional monetary stimulus measures over the longer term. Low interest rates and cost-cutting have allowed companies to continue being profitable, but this can not carry on indefinitely. Some companies have taken to issuing debt to fund shareholder-friendly activities, and although the practice is less prevalent in Europe, it highlights the need for careful security selection. As fundamentally-driven investors, some modest volatility should uncover opportunities given that we maintain high-conviction, long-term positions. Sterling supply is likely to remain muted as companies take advantage of extremely low euro zone borrowing rates. Uncertainty in the run-up to the UK referendum will also likely dampen sterling issuance.

Synthetic Risk and Reward Indicator

The Fund has been allocated a risk number based on the historic volatility of its share price. Where insufficient share price information is available, the risk number has been based on the historic volatility of the asset classes appropriate to the Fund.

- This indicator is based on historical data, calculated using European Union rules, and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean 'risk free'.
- Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default.
- The value of investments will be affected by changes in exchange rates.
- Full information on the risks applicable to the Fund is detailed in the Prospectus.

AVIVA INVESTORS MANAGED HIGH INCOME FUND

INVESTMENT OBJECTIVE

To provide a high level of investment income.

INVESTMENT POLICY

Diversified investment in global fixed interest securities issued in a variety of currencies by governments, supranational institutions and corporates.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default. The value of investments will be affected by changes in exchange rates.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 1.95 per cent (share class 1), net of fees. The Fund's peer group, the Investment Association Sterling Strategic Bond sector generated an average return of 1.23 per cent.

Investment-grade sterling corporate bonds delivered positive returns after underlying government bonds rallied sharply as investors opted for safe-haven assets amid continually plunging oil prices and ongoing concerns about a slowdown in global growth. Gilt markets were further boosted after the Bank of England (BoE) said the UK economy was not yet strong enough to contemplate raising interest rates. Sterling credit spreads widened even though new supply was down from last year. Investor appetite for riskier assets rose towards the end of the period however, after the European Central Bank (ECB) announced, among other measures, that it would expand its bond-buying programme to include corporate bonds. For its part, the BoE left interest rates unchanged while highlighting that political uncertainty ahead of the UK's referendum on EU membership could delay spending and depress domestic demand in the short-term. European high-yield debt also registered positive returns alongside rising investor appetite for riskier assets.

AVIVA INVESTORS MANAGED HIGH INCOME FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

Fund outperformance versus its peer group was partially due to its cautious positioning as economic turmoil roiled financial markets. Holdings of Imperial Tobacco were particularly beneficial as the company's limited exposure to emerging markets fuelled existing rumours that it could be a takeover target for other cigarette makers. Positions in debt issued by Dutch banking group Rabobank furthered gains as the ECB sweetened incentives for banks to increase lending. Holdings in Germany's second largest cable operator Unitymedia did particularly well as it continued to consolidate market share. A stake in Chemours, an American chemicals company which was spun off from DuPont was another outstanding performer after agreeing to sell its aniline chemical facility for approximately \$140 million in cash. A position in French telecommunications company Altice also contributed to returns as it announced plans for expansion into the US market and as the company successfully refinanced outstanding debt. Holdings in British fashion retailer NewLook ramped up fund gains further as the company benefitted from improvement in retail sales. Debt issued by Italian telecommunications firm Telecom Italia further bolstered gains as rumours emerged it could be an acquisition target. Returns were undermined by exposure to the banking and insurance sectors which did poorly as fears of a global recession gripped investors.

The ECB's corporate bond buying should support credit markets in the short term; however we remain mindful of the potential consequences of unconventional monetary stimulus measures over the longer term. Low interest rates and cost-cutting have allowed companies to continue being profitable, but this can not carry on indefinitely. Some companies have taken to issuing debt to fund shareholder-friendly activities, and although the practice is less prevalent in Europe, it highlights the need for careful security selection. As fundamentally-driven investors, some modest volatility should uncover opportunities given that we maintain high-conviction, long-term positions. Sterling supply is likely to remain muted as companies take advantage of extremely low euro zone borrowing rates. Uncertainty in the run-up to the UK referendum will also likely dampen sterling issuance.

AVIVA INVESTORS MONTHLY INCOME PLUS FUND

INVESTMENT OBJECTIVE

A high income payable monthly and to guard against capital erosion.

INVESTMENT POLICY

Diversified investment, principally in the UK, in fixed interest securities, convertibles, preference shares and high yielding equities.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default. The value of investments will be affected by changes in exchange rates.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 2.52 per cent (share class 1), net of fees. The Fund's peer group, the Investment Association Sterling UK Corporate Bond sector, generated an average return of 2.29 per cent.

Investment-grade sterling corporate bonds delivered positive returns after underlying government bonds rallied sharply as investors opted for safe-haven assets amid continually plunging oil prices and ongoing concerns about a slowdown in global growth. Gilt markets were further boosted after the Bank of England (BoE) said the UK economy was not yet strong enough to contemplate raising interest rates. Sterling credit spreads widened even though new supply was down significantly from last year. Investor appetite for riskier assets rose towards the end of the period however, after the European Central Bank (ECB) announced, among other measures, that it would expand its bond-buying programme to include corporate bonds. For its part, the BoE left interest rates unchanged while highlighting that political uncertainty ahead of the UK's referendum on EU membership could delay spending and depress domestic demand in the short-term.

AVIVA INVESTORS MONTHLY INCOME PLUS FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

Fund performance was broadly in line with that of its peer group. Holdings of Imperial Tobacco were especially beneficial as the company's limited exposure to emerging markets fuelled existing rumours that it could be a takeover target for other cigarette makers. A stake in the owners of the original Canary Wharf building, amid other properties, also enhanced returns after a court ruling prevented the company from calling their bonds at par, which lifted prices sharply in the aftermath. Positions in debt issued by Dutch banking group Rabobank furthered gains as the ECB sweetened incentives for banks to increase lending. Returns were also aided by holdings in highly-rated global resources company BHP Billiton as commodities staged an initial recovery. DirecTV also did well after bond prices rose to reflect the higher credit rating of its new parent company AT&T. Not owning German utility company RWE also helped as the company continues to decommission its nuclear power plants at a considerable cost. Newly-issued debt from Irish building group CRH performed exceptionally well as yield-hungry investors were keen to own the longer-dated bonds. Returns were undermined by exposure to the banking and insurance sectors which did poorly as fears of a global recession gripped investors.

The ECB's corporate bond buying should support credit markets in the short run; however we remain mindful of the potential consequences of unconventional monetary stimulus measures over the longer term. Low interest rates and cost-cutting have allowed companies to continue being profitable, but this can not carry on indefinitely. Some companies have taken to issuing debt to fund shareholder-friendly activities, and although the practice is less prevalent in Europe, it highlights the need for careful security selection. As fundamentally-driven investors, some modest volatility should uncover opportunities given that we maintain high-conviction, long-term positions. Sterling supply is likely to remain muted as companies take advantage of extremely low euro zone borrowing rates. Uncertainty generated in the run-up to the UK referendum will also likely dampen sterling issuance.

Synthetic Risk and Reward Indicator

The Fund has been allocated a risk number based on the historic volatility of its share price. Where insufficient share price information is available, the risk number has been based on the historic volatility of the asset classes appropriate to the Fund.

- This indicator is based on historical data, calculated using European Union rules, and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean ‘risk free’.
- Bond values are affected by changes in interest rates, and the bond issuer’s creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default.
- The value of investments will be affected by changes in exchange rates.
- Full information on the risks applicable to the Fund is detailed in the Prospectus.

AVIVA INVESTORS STRATEGIC BOND FUND

INVESTMENT OBJECTIVE

To provide a high total return from a diversified portfolio of global debt securities.

INVESTMENT POLICY

Diversified investment in global fixed interest securities, including non-investment grade.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

Note: At least 80 per cent of assets will either be in sterling or currency hedged back to sterling.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default. The value of investments will be affected by changes in exchange rates. Where a third party appointed to manage transactions or ensure the safe keeping of assets fails in their duty a loss may occur. Financial derivatives may only require a low initial deposit relative to the asset exposure, a relatively small price movement in the underlying asset may result in substantial losses to the Fund.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 1.42 per cent (share class 1), net of fees. The Fund's peer group, the Investment Association Sterling Strategic Bond sector generated an average return of 1.23 per cent.

Investment-grade sterling corporate bonds delivered positive returns after underlying government bonds rallied sharply as investors opted for safe-haven assets amid continually plunging oil prices and ongoing concerns about a slowdown in global growth. Gilt markets were further boosted after the Bank of England (BoE) said the UK economy was not yet strong enough to contemplate raising interest rates. Sterling credit spreads widened even though new supply was down from last year. Investor appetite for riskier assets rose towards the end of the period however, after the European Central Bank (ECB) announced, among other measures, that it would expand its bond-buying programme to include corporate bonds. For its part, the BoE left interest rates unchanged while highlighting that political uncertainty ahead of the UK's referendum on EU membership could delay spending and depress domestic demand in the short-term. European high-yield debt also registered positive returns alongside rising investor appetite for riskier assets.

AVIVA INVESTORS STRATEGIC BOND FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

Fund outperformance versus its peer group was partially due to its cautious positioning as economic turmoil roiled financial markets. Holdings of Imperial Tobacco were particularly beneficial as the company's limited exposure to emerging markets fuelled existing rumours that it could be a takeover target for other cigarette makers. Positions in debt issued by Dutch banking group Rabobank furthered gains as the ECB sweetened incentives for banks to increase lending. Holdings in Germany's second largest cable operator Unitymedia did particularly well as it continued to consolidate market share. A stake in Chemours, an American chemicals company which was spun off from DuPont was another outstanding performer after agreeing to sell its aniline chemical facility for approximately \$140 million in cash. A position in French telecommunications company Altice also contributed to returns as it announced plans for expansion into the US market and as the company successfully refinanced outstanding debt. Holdings in British fashion retailer NewLook ramped up fund gains further as the company benefitted from improvement in retail sales. Debt issued by Italian telecommunications firm Telecom Italia further bolstered gains as rumours emerged it could be an acquisition target. Returns were undermined by exposure to the banking and insurance sectors which did poorly as fears of a global recession gripped investors.

The ECB's corporate bond buying should support credit markets in the short term; however we remain mindful of the potential consequences of unconventional monetary stimulus measures over the longer term. Low interest rates and cost-cutting have allowed companies to continue being profitable, but this can not carry on indefinitely. Some companies have taken to issuing debt to fund shareholder-friendly activities, and although the practice is less prevalent in Europe, it highlights the need for careful security selection. As fundamentally-driven investors, some modest volatility should uncover opportunities given that we maintain high-conviction, long-term positions. Sterling supply is likely to remain muted as companies take advantage of extremely low euro zone borrowing rates. Uncertainty in the run-up to the UK referendum will also likely dampen sterling issuance.

Synthetic Risk and Reward Indicator

The Fund has been allocated a risk number based on the historic volatility of its share price. Where insufficient share price information is available, the risk number has been based on the historic volatility of the asset classes appropriate to the Fund.

- This indicator is based on historical data, calculated using European Union rules, and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean 'risk free'.
- Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default.
- The value of investments will be affected by changes in exchange rates.
- Where a third party appointed to manage transactions or ensure the safe keeping of assets fails in their duty a loss may occur.
- Financial derivatives may only require a low initial deposit relative to the asset exposure, a relatively small price movement in the underlying asset may result in substantial losses to the Fund.
- Full information on the risks applicable to the Fund is detailed in the Prospectus.

AVIVA INVESTORS EUROPEAN EQUITY FUND

INVESTMENT OBJECTIVE

Long term capital appreciation.

INVESTMENT POLICY

Diversified investment within and across European equity markets. Allocations to individual markets will vary over time. Individual equity selections will be based on price and long term total return prospects.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. The value of investments will be affected by changes in exchange rates.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund delivered a total return of 10.80 per cent (share class A), net of fees, compared to an average return of 5.63 per cent for its peer group the Investment Association Europe excluding UK sector. The Fund's benchmark, the FTSE® AW Europe ex UK Index, returned -3.28 per cent.

Several of the Fund's holdings in technology stocks, including Temenos, SAP and Infineon Technologies, performed well. Swiss banking-software firm Temenos gained on earnings upgrades as full-year results highlighted strong year-on-year growth in licensing revenues. German business software provider SAP reported impressive fourth quarter results, with rapid growth in cloud computing services. Third quarter results from German semiconductor firm Infineon Technologies exceeded forecasts, with rising demand for power management chips, while the company has also developed sensors for the autos market. In the healthcare sector, the Fund's sizeable holding in Genmab performed well after the US Food and Drug Administration approved the Danish biotech firm's treatment for multiple myeloma, a form of blood cancer.

The Fund's limited exposure to consumer staples, and the food and beverages sectors in particular, was detrimental as stocks with relatively predictable earnings were favoured when equity markets became increasingly volatile during the opening weeks of 2016.

The Fund participated in the Initial Public Offering (IPO) of shares in Dutch bank ABN Amro, which performed well following flotation. We have limited exposure to banks owing to the sector's poor profitability record, however we acquired a holding in ABN Amro for its focus on the strongly growing Dutch economy and the bank's favourable capital ratios.

AVIVA INVESTORS EUROPEAN EQUITY FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

Another key addition was Orange, the French telecom operator. Orange's trading performance has been improving with a return to growth in sales and profits, as its mobile and fixed networks are gaining new subscribers.

We assess investment opportunities on each company's individual merits rather than on a market view. Nonetheless we are cautiously optimistic on the medium-term prospects for European equities. The latest surveys suggest the European economic outlook is improving, and we expect the region to grow at a steady but modest rate, supported by stimulus from the European Central Bank.

Synthetic Risk and Reward Indicator

The Fund has been allocated a risk number based on the historic volatility of its share price. Where insufficient share price information is available, the risk number has been based on the historic volatility of the asset classes appropriate to the Fund.

- This indicator is based on historical data, calculated using European Union rules, and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean 'risk free'.
- The value of investments will be affected by changes in exchange rates.
- Full information on the risks applicable to the Fund is detailed in the Prospectus.

AVIVA INVESTORS INTERNATIONAL INDEX TRACKING FUND

INVESTMENT OBJECTIVE

To track the total return (after charges) of the FTSE® World (ex UK) Index.

INVESTMENT POLICY

To invest in international equities employing a combination of sampling and full replication strategies across the equity markets which comprise the FTSE® World (ex UK) Index.

The Fund may invest in any of the following financial instruments in order to achieve its investment objective: transferable securities, money market instruments, units in collective investment schemes, deposits and derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. The value of investments will be affected by changes in exchange rates.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund (share class 1) delivered a total return of 11.0 per cent net of fees. The Fund's benchmark, the FTSE®World ex UK index, returned 10.86 per cent. The sector average return generated by the Fund's peer group, the Investment Association Global (equity) sector was 8.19 per cent.

Although equities have been volatile over the review period, recording heavy losses during the opening weeks of 2016 on concerns over the economic outlook for China and further weakness in commodity markets, international markets have gained ground. The weakness of sterling meant that returns for UK-based investors were substantially enhanced. The strength of the dollar enhanced returns from US equities, as investors had largely anticipated the US Federal Reserve's decision to raise interest rates. Recent US economic indicators have been encouraging although corporate earnings announcements revealed that the strengthening dollar remains a significant impediment for revenue growth, and companies continue to place a strong emphasis on cost cutting to maintain profit margins. In Europe, a backdrop of sluggish economic growth has meant that companies have struggled to deliver revenue growth. Although the yen also strengthened against sterling, this was insufficient to offset losses from Japanese equities, while it has put further pressure on international earnings for Japan's exporting companies. The Bank of Japan's unexpected decision in January to adopt the unorthodox policy of negative interest rates, aimed at reviving the domestic economy, triggered a sharp sell-off in financial stocks. Although the mainland Chinese market has been highly volatile, the smaller Asia Pacific markets have performed well, with a strong contribution from currency movements.

AVIVA INVESTORS INTERNATIONAL INDEX TRACKING FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

After a very shaky start to 2016, equity markets have stabilised in recent months, although the rebound in share prices cannot be attributed to markedly improving global economic prospects. However, fears of recession have faded and the outlook is for ongoing growth, albeit modest with headwinds in some quarters, notably China and the euro zone.

FUND FACTS

Accounting dates	Ex-dividend dates	Distribution dates
15 October	16 October	15 December
15 April	16 April	15 June

Ongoing Charges Figure*

	15.04.16	15.10.15
Share Class 1**	0.67%	0.96%
Share Class 2	0.27%	0.26%
Share Class 3	0.27%	0.26%

* The Ongoing Charges Figure (OCF) is calculated as the ratio of the total ongoing charges to the average net asset value of the Fund over the period. The OCF is made up of the Annual Management Charge and other operating costs deducted from the assets of the Fund during the period, except for those payments that are explicitly excluded (performance fees).

** Please note that with effect from 8 February 2016, the Annual Management Charge on share class 1 was reduced from 0.90% to 0.60%.

The value of an investment in the Aviva Investors International Index Tracking Fund and any revenue from it can go down as well as up. You may not get back the original amount invested. Past performance is not a guide to future performance.

AVIVA INVESTORS GLOBAL EQUITY INCOME FUND

INVESTMENT OBJECTIVE

To provide an annualised income yield at least one and a quarter times that of the annual income yield obtainable on the MSCI World Index (GBP), with the potential for capital growth. Income on the Fund will be paid quarterly. The income aim is a 12 month rolling target and is before the deduction of charges and after the deduction of tax for a UK basic rate income taxpayer. For the purposes of measuring the income aim the annual income yield of the Index will also be calculated on a 12 month rolling basis.

INVESTMENT POLICY

The Fund aims to achieve the investment objective by investing principally in global equities judged to offer above average dividend yields with prospects of dividend growth and the potential for long term capital growth. The Fund may also invest in other transferable securities, collective investment schemes, money market instruments, deposits, cash, near cash, derivatives and forward transactions.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. The value of investments will be affected by changes in exchange rates. The level of targeted income is not guaranteed and may not be achieved.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

FUND MANAGER'S REPORT

The Fund (share class 1) returned 10.45 per cent over the reporting period, in comparison with a sector average return of 8.97 per cent for the Investment Association Global Equity Income sector. The MSCI World Index, the Fund's benchmark, returned 10.10 per cent.

Stock selection in the consumer, financial and industrial sectors contributed to performance over the review period. Among consumer stocks, US tobacco group Altria delivered solid fourth-quarter results, as its Marlboro brand increased market share while profit margins have improved. Restaurant chain McDonald's was another key contributor. The company's trading performance is improving, particularly in the US.

Among financials, the Fund's holding in Japanese real estate construction group Daito Trust performed well as the sector is viewed as a prime beneficiary of the Bank of Japan's negative interest rate policy aimed at reviving domestic economic growth. Elsewhere, German industrial conglomerate Siemens gained after company announced the divestment of its healthcare division, to focus on its core power and energy management businesses.

Stock selection in the energy and basic materials sectors detracted. US oil producer Marathon Petroleum released disappointing quarterly results, while LyondellBasell, a leading plastics producer, weakened on concerns that low oil prices are likely to erode profit margins in North America.

AVIVA INVESTORS GLOBAL EQUITY INCOME FUND (CONTINUED)

FUND MANAGER'S REPORT (CONTINUED)

New holdings for the Fund included Dutch engineering group Kone, focused on the elevator and escalator markets and well positioned to benefit from urbanisation. The Fund also initiated a position in US healthcare provider CVS Health, which operates retail pharmacies as well as pharmacy benefit management and should benefit from increasing demand for healthcare prescriptions and services. The Fund sold its holding in US media company Time Warner, mainly due to concerns over declining traditional cable TV subscriptions with consumers preferring other platforms such as Netflix.

After a very shaky start to 2016, equity markets have stabilised although the rebound in share prices cannot be attributed to markedly improving global economic prospects. However, fears of recession have faded and the outlook is for ongoing global economic growth, albeit modest with headwinds in some quarters, notably China and the euro zone.

AVIVA INVESTORS MULTI-STRATEGY TARGET RETURN FUND

INVESTMENT OBJECTIVE

To deliver a positive return over rolling three year periods regardless of the prevailing stock market environment. The Fund aims to generate a positive return, on average 5% per annum above the Bank of England Base Rate before the deduction of charges, over rolling three year periods. In seeking to target this level of return the Fund also aims to manage volatility to a target of less than half the volatility of global equities, measured over the same rolling three year periods. These aims, however, are not guaranteed and it may not always be possible to achieve positive returns or to achieve the target level of volatility over rolling three year periods, or over any period of investment. Consequently, investors' capital is at risk.

INVESTMENT POLICY

In aiming to achieve the investment objective the Fund may invest globally in any of the following financial instruments: transferable securities, money market instruments, fixed interest securities, units in collective investment schemes, derivatives, forwards and deposits.

The Fund will make significant use of derivative instruments including: futures, options, swaps, swaptions and forwards. The Fund may take both long and synthetic short positions and derivative usage may include but is not limited to derivatives on interest rates, inflation rates, bonds, credit, equity, financial indices, volatility, dividend payments and currencies. Derivatives usage may be for the purposes of hedging, efficient portfolio management, or investment purposes and may be exchange traded or traded off exchange through market counterparties. The use of derivative instruments as part of the investment policy will mean that the Fund may, from time to time, have substantial holdings in liquid assets including deposits and money market instruments.

RISK PROFILE

The value of investments and the income from them will change over time. The Fund price may fall as well as rise and as a result you may not get back the original amount you invested. Leverage techniques may be used by the Fund. A relatively small price movement in an underlying asset may amplify losses and the Fund may be exposed to losses which are greater than the initial amount invested. Any derivatives usage can result in substantial losses to the Fund where expectations as to how a derivative will perform prove to be incorrect or inefficient, or in adverse market conditions. Losses may occur if an organisation through which the Fund transacts become insolvent or fails to meet its obligations. This risk may be reduced by obtaining assets as collateral from these organisations. Bond values are affected by changes in interest rates, and the bond issuer's creditworthiness. Bonds that produce a higher level of income usually have a greater risk of default. Developing market investments can be less easy to buy and sell, and their values may be influenced by the economic and political risks of the countries of issue. The value of investments will be affected by changes in exchange rates.

Full information on the risks applicable to the Fund is detailed in the Prospectus.

AVIVA INVESTORS MULTI-STRATEGY TARGET RETURN FUND (CONTINUED)

FUND MANAGER'S REPORT

The Fund (share class 6) returned -0.60 per cent over the period. The Fund's peer group – the Investment Association Targeted Absolute Return sector – delivered an average return of 0.27 per cent.

During a volatile period for financial markets, where risk aversion rose sharply before subsiding, we had losses from strategies giving exposure to Japanese, European and Chinese equity markets.

Strategies that were looking to profit from the US dollar rising against a range of other currencies also weighed on performance as the US currency declined despite the US Federal Reserve having in December lifted interest rates for the first time in nearly a decade.

These negatives were partially offset by gains in a strategy that is looking to profit from lower interest rates in Australia, and a 'relative-value' US equity position which is anticipating shares in larger US companies will outperform the 'small-cap' sector.

When constructing the portfolio we maintain an investment horizon of three years. That means continually assessing both existing and potential new positions to assess the expected performance over that horizon.

As part of this process, during March we made a number of changes to the portfolio, the net effect of which was to increase portfolio risk. In particular, we added to our equity positions and a strategy that looks to profit from an increase in European inflation.

We also initiated a position in US high-yield corporate bonds. We simultaneously cut some risk-reducing positions, including two which were looking to profit from an increase in the US dollar's value relative to the euro and Mexican peso.

Synthetic Risk and Reward Indicator

The Fund has been allocated a risk number based on the historic volatility of its share price. Where insufficient share price information is available, the risk number has been based on the historic volatility of the asset classes appropriate to the Fund.

- This indicator is based on historical data, calculated using European Union rules, and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean ‘risk free’.
- The value of investments will be affected by changes in exchange rates.
- Full information on the risks applicable to the Fund is detailed in the Prospectus.

Changes to Depositary fee

On 15 March 2016, the Depositary fee increased on all Funds.

Share Class launch

On 25 April 2016 share class 2 (accumulation shares) were launched on the Aviva Investors Distribution Fund.

Addition of eligible securities markets

On 9 March 2016, following approval by the Depositary, the Colombo Stock Exchange and NYSE ARCA were added as eligible securities markets for the Aviva Investors Multi-Strategy Target Return Fund.

Significant Information

FATCA and CRS Reporting

Tax regulations require us to collect information about your tax residency and you will have therefore provided this at the time of making your investment with us. The term tax regulations refers to the International Tax Compliance Regulations 2015 which implements the Foreign Account Tax Compliance Act (FATCA) and the OECD Common Reporting Standard (CRS) for Automatic Exchange of Financial Account Information. As a result, in certain circumstances we will be obliged to share information about your account(s) with Her Majesty's Revenue & Customs (HMRC) who may in turn share this information with any or all jurisdictions that have agreed to exchange information under FATCA and CRS. The information previously provided by you at the time of making your investment will be used by us to report to HMRC regarding your account(s), where so required. This does not apply where you have invested with us solely via an ISA.

Regular Savings Mandates Set Up Before 31 December 2012

From 13 April 2016, the ACD has discontinued the initial charge in full on all future investment made in each of the Funds through regular investment mandates set up before 31 December 2012.
