Aviva Insurance Ireland Designated Activity Company

Solvency and Financial Condition Report

2025

Summary

The purpose of the Solvency and Financial Condition Report (SFCR) is to provide information required by the Solvency II (SII) regulatory framework and in particular the capital position of Aviva Insurance Ireland Designated Activity Company (the Company) as at 31 December 2025. The report sets out different aspects of the Company's business and performance, system of governance, risk profile, valuation methods used for solvency purposes and its capital management practices. Tables included in sections A to E are presented in euros rounded to the nearest million. Rounding differences of +/- one unit can occur.

Business and Performance

The Company is a limited company registered in the Republic of Ireland (Ireland) and a member of the Aviva plc group of companies. The principal activity of the Company is the transaction of general and health (non-life) insurance business in Ireland. The Company has a UK Branch, the principal activity of which is to write risks predominately in European Economic Area (EEA) countries. The major classes of business underwritten are personal lines (motor, home and other), health and commercial lines (property, liability, motor and other). The Company has no employees. The majority of employees engaged in the activities of the Company are employed by subsidiary undertakings of Aviva plc, Aviva Employment Services Limited and Aviva Group Services Ireland Limited.

The Company made an IFRS profit before tax of €19m in the year ended 31 December 2025 (2024: €22m). This comprised underwriting profit of €8m (2024: €15m), net investment income of €15m (2024: €20m) less other expenses of €4m (2024: €13m).

The Company has a quota share reinsurance arrangement with its parent company, Aviva Insurance Ltd (AIL) and ceded net underwriting profit of €40m (2024: €70m) to AIL during the year. This agreement provides proportional reinsurance to the Company as follows:

- 70% quota share arrangement in respect of general and health (non-life) insurance risks arising in Ireland;
- 85% quota share arrangement covering European Mobile Device Insurance business in run off; and
- 100% quota share arrangement covering all other business.

Section A of this report sets out further details about the Company's key operations and financial performance over the year.

System of Governance

The Board's role is to be collectively responsible for promoting the long-term success of the Company and for setting the Company's strategy, against which management's performance is monitored. It sets the Company's risk appetite and satisfies itself that financial controls and risk management systems are robust, whilst ensuring the Company is adequately resourced. A strong system of governance throughout the Company aids effective decision-making and supports the achievement of the Company's objectives for the benefit of customers and shareholders whilst maintaining compliance with regulations.

All employees working on behalf of the Company are involved in the management and mitigation of risk, with the Risk Management Framework (RMF) embedded in the day-to-day management and decision-making processes. The 'three lines of defence model' is adopted by the Company and across Aviva plc (as required by the RMF policy). Line management in the business is accountable for risk management, including the implementation of the RMF and embedding of the risk culture.

The RMF forms an integral part of management and Board processes and the decision-making framework across the Company. The key elements of the Risk Management Framework comprise:

- **Systems of Governance:** This includes risk policies and business standards, risk oversight committees and structures, and roles and responsibilities (including the three lines of defence model and key control functions);
- **Risk Management Processes:** This comprises the processes used to Identify, Measure, Manage, Monitor and Report (IMMMR) risks, including the use of stress and scenario testing (SST); and

- **Risk Appetite Frameworks:** This refers to the risks that are selected in pursuit of return, the risks accepted but sought to be minimised and the risks avoided or transferred, including quantitative expressions of the level of risk that can be supported.

The Company's Board and Board Committee responsibilities and arrangements, and the fundamental approach to the system of governance, have not materially changed over the year.

Section B of this report provides further details of the Company's System of Governance.

Risk Profile

The types of risk to which the Company is exposed have not changed significantly over the year and remain credit, market, underwriting, liquidity, operational, strategic, climate, and Aviva plc (Group) risks.

Risk identification is carried out on a regular basis, is embedded in the business planning process and any major business initiatives and draws on a combination of internal and external data, covering both normal conditions and stressed environments.

The SII Capital Requirement (SCR) and SCR Cover Ratio are the bases on which the Company sets SII capital risk appetites and limits and are used to assess the significance of risks and to appropriately direct resources to their management.

Some categories of risk are not measured and managed solely by holding capital. Liquidity risk is measured through both absolute level targets and bespoke liquidity coverage ratios.

Section C of this report further describes the risks to which the Company is exposed and how it identifies, measures, manages, monitors and reports risks, including the use of SST.

Valuation for Solvency Purposes

Assets, technical provisions and other liabilities are valued in the Company's SII Balance Sheet according to the SII Directive and related guidance. The principle that underlies the valuation methodology for SII purposes is the amount for which they could be exchanged, transferred or settled by knowledgeable and willing third parties in an arm's length transaction.

At 31 December 2025, the Company's excess of assets over liabilities was €251m on a SII basis which is €126m lower than the value under IFRS. The difference is largely driven by the elimination of goodwill. Goodwill is valued at €nil under SII.

The majority of the Company's assets measured at fair value are based on quoted market information or observable active market data. Where quoted market information or observable market data is not available, an alternative method for valuation is used.

No material changes were made to the bases used to recognise and value the Company's assets, technical provisions and other liabilities, or to their estimations, during the year.

Section D of this report provides further description of the bases, methods and main assumptions used in the valuation of assets, technical provisions and other liabilities for each material asset or liability class. In addition, it also provides an explanation of the material differences between the IFRS and SII bases of valuation.

Capital Management

The Company's primary capital management objective is to maintain an efficient capital structure in a manner consistent with the Company's risk profile whilst maintaining its regulatory capital surplus in accordance with approved risk appetites.

There have been no material changes to the Company's objectives, policies or processes for managing its capital during the year.

The Company manages its Own Funds in conjunction with its SCR and seeks, on a consistent basis, to:

- Match the profile of its assets and liabilities, taking into account the risks inherent in the business;
- Maintain sufficient, but not excessive, financial strength to support new business growth, and satisfy the requirements of the Company's policyholders, shareholders and its regulator;
- Retain financial flexibility by maintaining strong liquidity; and
- Allocate capital efficiently, applying it to support value-adding growth and repatriating excess capital to its shareholder through dividends.

In the calculation of the SCR, the Company uses the Standard Formula (SF) approach. At 31 December 2025, the total eligible Own Funds to meet the SCR was €251m (2024: €246m) all of which was represented by unrestricted Tier 1 capital. The total eligible Own Funds to meet the MCR were €251m (2024: €246m). The Company's SCR, at 31 December 2025, was €155m (2024: €152m). Its MCR was €41m (2024: €42m). The surplus of eligible Own Funds to SCR was €96m (2024: €94m) which translates to an SII Cover Ratio of 162% (2024: 162%), with the movement in the year mainly driven by profit generated from the Company's operations. This is partially offset by an increase in the SCR driven by increasing premium and reserve volumes.

Section E of this report further describes the objectives, policies and procedures employed by the Company for managing its Own Funds. The section also covers information on structure and quality of Own Funds and calculation of SCR.

Aviva Insurance Ireland Designated Activity Company

Solvency and Financial Condition Report

2025

A. Business and Performance

In this Chapter

A.1	Business	4
A.2	Underwriting Performance	5
A.3	Investment Performance	7
A.4	Performance of Other Activities	7
A.5	Any Other Information	7

A. Business and Performance

The 'Business and Performance' section of the report sets out the Company's business structure, key operations, and financial performance over the reporting period.

A.1 Business

The Company is a limited company, registered in Ireland, and a member of the Aviva plc group of companies.

Qualifying holdings

The Company's shares and the associated voting rights are wholly owned by Aviva Insurance Limited (the parent company), being a qualifying holding in the Company.

Supervisor

The Company is authorised and regulated by the Central Bank of Ireland (CBI). The Group's supervisor is the Prudential Regulatory Authority (PRA), which is part of the Bank of England. The Group is regulated by the PRA and the Financial Conduct Authority (FCA) in the UK. Contact details for the CBI are as follows:

Address New Wapping Street, North Wall Quay, Dublin 1, D01 F7X3
Telephone number +353 1 224 5800

External auditor

The Company's external auditor is Ernst & Young, contact details are as follows:

Address Harcourt Centre, Harcourt Street, Dublin 2, Ireland, D02 YA40
Telephone number +353 1 475 0555

Financial statements

The Company's financial statements are available from the Company Secretary, Cherrywood Business Park, Dublin, Ireland, D18 W2P5.

The SFCR is presented in euros rounded to the nearest million. The Quantitative Reporting Templates (QRT) are presented in euros rounded to the nearest thousand. Rounding differences of +/- one unit can occur.

A.1.1 Organisation

The following chart shows, in simplified form, the Company's position within the structure of the Group as at 31 December 2025:

* Incorporated in the United Kingdom

** Incorporated in the Republic of Ireland

A.1.2 Business operations and events occurring in the year

Business operations

The principal activity of the Company is the transaction of general and health insurance business in Ireland. The Company also operates a Branch in the UK which carries out general insurance business in the EEA in a range of insurance classes primarily for commercial clients. The major classes of business underwritten are personal lines (motor, home and other), health and commercial lines (property, liability, motor and other).

Significant business and other events

The company's financial results are affected by a number of external factors, including weather events, trends in claims developments, general economic and market conditions, government policy and legislation and exchange rate fluctuations. The impact of these events on IFRS performance and Solvency II may differ due to their different measurement and recognition criteria.

In September 2025, the Company increased its shareholding in Level Health Limited from 37.5% to 50% through investing €5 million cash consideration into the entity. As a result, the Company holds voting rights equivalent to a 50% shareholding within the joint venture.

A.2 Underwriting Performance

A.2.1 Measurement of underwriting performance

The Company uses underwriting profit to measure its underwriting performance. Underwriting profit is a non-GAAP financial performance measure, calculated on an IFRS basis. It excludes certain items to enhance comparability and understanding of underwriting performance by highlighting net underwriting income attributable to on-going underwriting operations. Examples of items excluded from underwriting profit are investment return, the unwind of discounting on incurred claims and unrealised foreign exchange gains and losses. The items excluded from underwriting profit, which comprise the Company's investment performance and its performance of other activities, are detailed in sections A.3 and A.4 respectively.

A.2.2 Underwriting profit

The table below presents the underwriting profit for the Company for the year ended 31 December 2025, as well as the reconciliation of underwriting profit to the IFRS profit before tax. The profit before tax is as shown in the Company's financial statements.

	€m	€m	€m	€m
Year ended 31 December	2025	2025	2024	2024
Insurance revenue		713		631
Insurance service expense		(650)		(506)
Net expense from reinsurance contracts		(47)		(105)
Insurance service result		16		20
Investment return		15		20
Net finance expense from insurance contracts		(22)		(36)
Net finance income from reinsurance contracts		17		29
Net financial result		10		13
Other operating expenses		(9)		(7)
Foreign exchange gains/(losses)		2		(4)
Profit before tax		19		22
Less: Net investment income (above, see A.3)		(15)		(20)
Add back:				
Unwind of discounting on incurred claims	6		8	
Foreign exchange (gains)/losses	(2)		4	
Other	1		1	
Performance of other activities (see A.4)		4		13
Underwriting profit		8		15

The Company's insurance revenue was €713m (2024: €631m). The Company achieved growth in personal lines new business and strong retention in both personal and commercial lines, supported by digital investment and the delivery of new products and distribution channels.

The Company's underwriting profit of €8m (2024: €15m) is net of underwriting profit ceded to the parent company during the year of €40m (2024: €70m) under the quota share arrangement.

Underwriting profit of €5m (2024: €15m) arose in Ireland and €3m (2024: €nil) in the UK Branch.

The decrease in the underwriting profit in Ireland reflects unfavourable year on year weather experience including the impact of Storm Eowyn in 2025.

The small increase in the underwriting profit in the UK Branch mainly reflects a difference in timing of profit recognition. While the internal quota share reinsurance arrangement with AIL cedes 100% of the underlying cashflows of the UK Branch, under IFRS 17 the measurement of the gross insurance contracts is based on the Premium Allocation Approach (PAA), whereas the measurement of the internal quota share reinsurance arrangement is based on the General Measurement Model (GMM). Consequently there are differences in the timing of recognition of profits related to the underlying gross insurance contracts and the timing of costs related to the internal quota share reinsurance arrangement. Over the lifetime of the underlying gross insurance contracts these differences will net to zero. Further details are provided in the Company's financial statements.

A.2.3 Quantitative Reporting Template S.05.01

Quantification of premiums, claims and expenses, analysed by SII lines of business, is provided in QRT S.05.01 (see Appendix F.1.2.2). This QRT has been prepared in accordance with the definitions and formats prescribed under SII. It includes the items (except net investment income) excluded from underwriting result in the reconciliation presented in section A.2.2 which are described in section A.4.

A summary of the information provided in the premium, claims and expenses QRT S.05.01, analysed by SII lines of business, is provided in the table below.

€m	Motor vehicle liability insurance	Other motor insurance	Fire and other damage to property insurance	General liability insurance	Other SII lines of business	Total
Year ended 31 December 2025						
Gross written premium	189	83	274	154	39	739
Net earned premium	53	23	61	35	6	178
Gross claims incurred	(128)	(59)	(134)	(94)	(24)	(439)
Net claims incurred	(45)	(21)	(37)	(17)	(4)	(124)
Direct expenses incurred	(16)	(7)	(20)	(9)	—	(52)
S.05.01 derived result	(8)	(5)	4	9	2	2
Year ended 31 December 2024						
Gross written premium	167	73	264	151	13	668
Net earned premium	44	19	54	34	—	151
Gross claims incurred	(96)	(42)	(102)	(95)	(2)	(337)
Net claims incurred	(22)	(10)	(42)	(25)	—	(99)
Direct expenses incurred	(11)	(5)	(19)	(10)	(1)	(46)
S.05.01 derived result	11	4	(7)	(1)	(1)	6

In the above table, claims handling expenses of €6m, which are included within claims in the table in section A.2.2, are shown in expenses. Claims also include the unwind of discounting on incurred claims and changes in economic assumptions for claims provisions that is excluded from the underwriting result in the table in section A.2.2.

The material SII lines of business underwritten by the Company, in order of the value of gross written premium, as presented in QRT S.05.01 (Appendix F.1.2.2), are:

Year ended 31 December	% of gross written premium	
	2025	2024
Fire and other damage to property insurance	37%	40%
Motor vehicle liability insurance	26%	25%
General liability insurance	21%	23%
Other motor insurance	11%	10%
Other SII lines of business	5%	2%
Total	100%	100%

A.3 Investment Performance

A.3.1 Measurement of investment performance

Net investment income, as shown in the Company's financial statements, is used as the measure to report the Company's investment performance.

Net investment income analysed by asset class

The table below provides an analysis of net investment income by asset class.

Net investment income €m	Debt securities	Other financial investments	Other	Total
Year ended 31 December 2025				
Interest income	15	—	—	15
Unrealised gains/(losses)	(12)	8	—	(4)
Realised gains	2	3	—	5
Investment expenses	—	—	(1)	(1)
	5	11	(1)	15
Year ended 31 December 2024				
Interest income	15	—	—	15
Unrealised gains/(losses)	9	(6)	—	3
Realised gains	—	3	—	3
Investment expenses	—	—	(1)	(1)
	24	(3)	(1)	20

The Company's net investment income for the year ended 31 December 2025 was €15m, a decrease of €5m compared with €20m in 2024. This reduction primarily reflects a lower total investment return from debt securities, which amounted to €5m in 2025, €19m less than the prior year, driven by movements in USD exchange rates during the period.

This impact was partly offset by net investment gains of €11m from other financial investments (2024: €3m loss). Other financial investments experienced two notable valuation movements:

- Gains arising from USD exchange rate movements in 2025, which increased the value of the Company's derivative contracts and helped offset the decline in debt securities; and
- Losses resulting from adverse interest rate movements on derivative contracts relative to 2024.

The Company employs derivatives for efficient portfolio management purposes, and to manage the asset-liability mismatch risks on its SII Balance Sheet and investment risk within agreed interest rate, inflation and exchange rate risk appetites.

A.3.2 Gains and losses recognised directly in equity

No gains or losses on investments have been recognised directly in equity (2024: €nil).

A.3.3 Investments in securitisation

The Company does not have any investments in securitisation.

A.4 Performance of Other Activities

A.4.1 Other income and expense

As described in section A.2.1, performance of other activities comprises those items of other income and expense, other than net investment return, excluded from underwriting result. The table in section A.2.2 summarises the loss of €4m (2024: €13m) that the Company sustained from its performance of other activities during the year, and reflects changes in the unwind of discounting on incurred claims and foreign exchange movements.

A.4.2 Leasing arrangements

On 1 February 2019, certain Irish properties occupied by the Company were subleased from AIL (holder of the respective head leases). Each sublease is reflected on the statement of financial position as a right-of-use asset and a lease liability. In July 2021 one of these subleases was terminated and replaced in August 2021 by a new lease held equally by the Company and Aviva Life & Pensions Ireland Designated Activity Company.

In January 2025, the Company decided to re-occupy a previously sublet property. This resulted in an increase (addition) to the Right of Use Asset for the re-occupation by Aviva and effectively reversed part of the original impairment made in 2021.

There were no material amounts in respect of leased assets recognised in the Company's income statement.

A.5 Any Other Information

A.5.1 Any Other Information

The Company has no other material information to disclose.

Aviva Insurance Ireland Designated Activity Company

Solvency and Financial Condition Report

2025

B. System of Governance

In this Chapter

B.1	General Information on the System of Governance	9
B.2	Fit and Proper Policy	11
B.3	Risk Management System including the Own Risk and Solvency Assessment	12
B.4	Internal Control System	14
B.5	Internal Audit Function	15
B.6	Actuarial Function	15
B.7	Outsourcing	16
B.8	Any Other Information	17

B. System of Governance

This section of the report sets out information regarding the ‘System of Governance’ in place within the Company.

Details of the structure of the undertaking’s ‘administrative, management or supervisory body’ (defined as including the Board, and Board committees) are provided. The roles, responsibilities and governance of key functions (defined as the Risk, Compliance, Internal Audit and Actuarial functions) are also provided. Other components of the system of governance are also outlined, including the risk management system and internal control system implemented across the business.

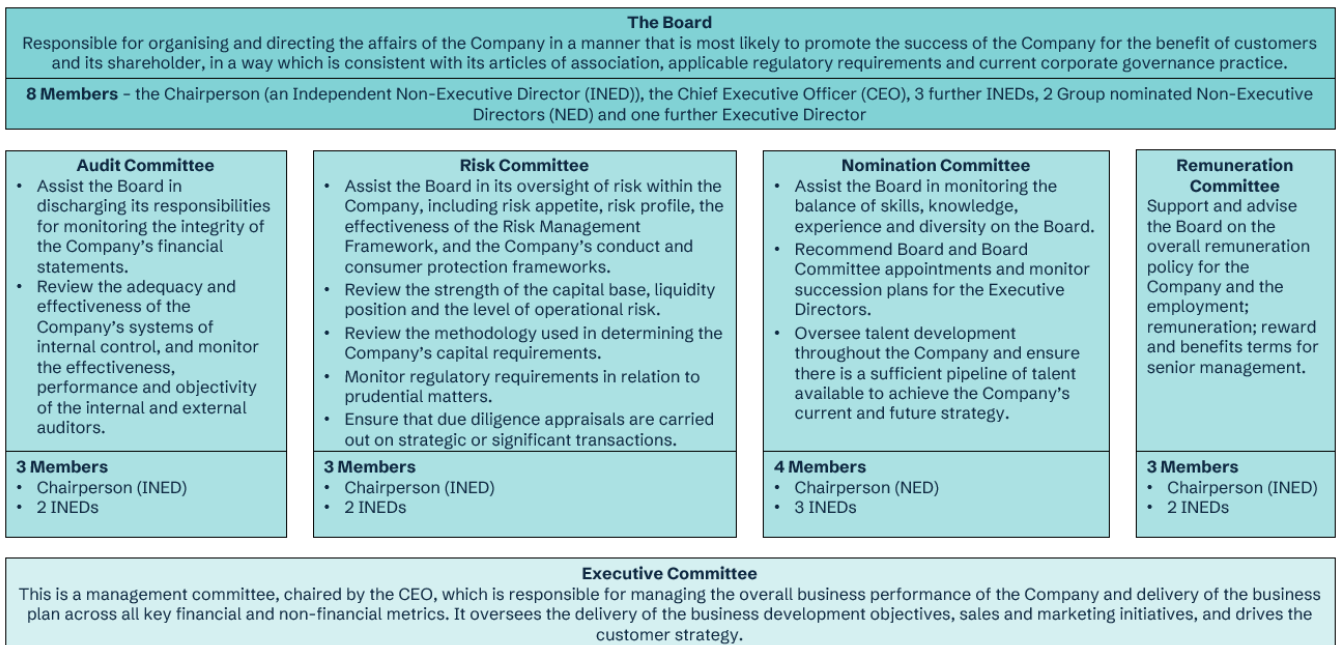

B.1 General Information on the System of Governance

B.1.1 Board structure

The Company’s Board is responsible for promoting the long-term success of the Company and for setting its strategy. It sets the Company’s risk appetite and satisfies itself that financial controls and risk management systems are robust. The system of governance throughout the Company aids effective decision-making and supports the achievement of the Company’s objectives for the benefit of policyholders and the shareholder.

The Company’s Board has established various committees and delegated responsibilities to assist in its oversight of risk management and the approach to internal controls. The duties of the Company’s Board and of each of its committees are set out in their respective terms of reference. The terms of reference list both those items that are specifically reserved for decision by the Board and those matters that must be reported to the Board.

The diagram below shows the segregation of responsibilities between the various committees, in addition to a description of the main roles of each.

Note: Effective from 1 February 2026, an additional INED joined the Board, Risk Committee and Nomination Committee.

The Company has a Reserving Committee, chaired by the Chief Financial Officer (CFO), which is responsible for reviewing the adequacy of reserves and recommending the IFRS and Solvency II technical provisions to the Audit Committee for inclusion in the financial statements and reporting. Membership of the Committee includes the Chief Actuary and the CRO, as well as two Independent Non-Executive Directors.

The ‘three lines of defence model’, and roles and responsibilities of key functions

Roles and responsibilities for risk management in the Company are based around the three lines of defence model.

The first line

Management is responsible for the application of the Risk Management Framework (RMF), for implementing and monitoring the operation of the system of internal control and for providing assurance to the Audit and Risk Committees¹ and the Board.

¹ Unless specifically specified otherwise the “Risk Committee” referred to in this document refers to the Board Risk Committee.

The second line

- The Risk Management Function is accountable for the quantitative and qualitative oversight and challenge of the identification, measurement, management, monitoring and reporting of principal risks and for developing and maintaining the RMF;
- The Compliance Function (including Financial Crime) supports and advises the business on the identification, measurement and management of its regulatory, financial crime and conduct risks and is accountable for monitoring and reporting on the Company’s compliance risk profile; and

- The Actuarial Function² is accountable for actuarial methodology, and reporting to the relevant governing body on the adequacy of reserves and capital requirements, as well as opinions on underwriting, reinsurance arrangements and the Own Risk and Solvency Assessment (ORSA) process.

² The Actuarial Function encompasses both operational execution (First Line) and independent oversight (Second Line)

The third line

The Internal Audit Function provides independent and objective assessment on the robustness of the RMF and the appropriateness and effectiveness of internal control to the Audit and Risk Committees, and to the Board.

Sections B.3.2, B.4.2, B.5 and B.6 detail the roles, responsibilities, authority, resources, independence and reporting lines of the Risk Management, Compliance, Internal Audit and Actuarial Functions respectively, and how their independence is ensured.

B.1.2 Material changes in the system of governance

The Company's Board and Board Committee responsibilities and arrangements, and the fundamental approach to the system of governance, have not materially changed during the year. The Non-Executive Chairperson, who also chaired the Nomination Committee and was a member of the Remuneration Committee, resigned in April 2025. One of the existing INEDs was appointed to the role of Chairperson. The majority of the Board continued to be comprised of non-executive directors. The newly appointed Chairperson resigned as a member of the Risk Committee and did not join the Remuneration Committee, therefore, the total number of Risk and Remuneration Committee members changed from four to three. The total number of Nomination Committee members also changed from four to three. There were no further changes to the Board/Board Committee compositions during the year

Note: the reduction in the number of members of the Board was temporary as, effective from 1 February 2026, an additional INED joined the Board, Risk Committee and Nomination Committee.

B.1.3 Adequacy of the Company's system of governance

The Board has approved a Governance Policy which sets out its role and responsibilities. The Board formally reviews its overall performance and that of individual Directors, relative to the Board's objectives, on an annual basis. In addition, every three years an evaluation by an external evaluator is undertaken in line with the Central Bank of Ireland requirements for High Impact designated insurance undertakings. Annually, the Board oversees and ensures that there are appropriate arrangements and processes in place to secure material compliance with the Company's relevant obligations (as defined under Section 225 of the Companies Act 2014). The firm submits an annual Compliance Statement to the Central Bank of Ireland in line with the obligations arising from the Corporate Governance Requirements for Insurance Undertakings 2015, following an internal second line documented assessment. The firm also submits an annual Compliance Statement to confirm material compliance with its obligations under Solvency II and the Insurance Acts.

In addition, the firm carries out an annual assessment of the effectiveness of the Company's governance, internal control and risk management systems which is certified by the Chief Executive Officer (CEO). Any material risks not previously identified, control weaknesses or non-compliance with the Company's risk policies and business standards or local delegations of authority are highlighted as part of this process. The Risk Function reviews and challenges this process and provides an opinion on the material accuracy and completeness of the assessment. The Risk, Compliance and Internal Audit functions also perform regular reviews during the year that assess the effectiveness of the Company's governance framework in order to provide ongoing assurance in relation to the effective operation of elements of the system of governance.

B.1.4 Remuneration policy

The majority of employees engaged in the activities of the Company are employed by subsidiary undertakings of Aviva plc, Aviva Employment Services Limited and Aviva Group Services Ireland Limited. The Company is recharged with the costs of the staff provided by these companies, and the employees are remunerated in line with the Company's remuneration policy. The Company's reward principles and arrangements are designed to incentivise and reward employees for achieving stated business goals in a manner that is consistent with the Company's approach to sound and effective risk management. The Company's remuneration policy is aligned to its strategy, incentivises achievement of the Company's annual business plan and longer-term sustainable growth of the business, and differentiates reward outcomes based on performance and behaviour that is consistent with the Company's values and relevant regulatory requirements.

B.1.4.1 Executive directors

The remuneration policy provides market competitive remuneration and incentivises Executive Directors (EDs) to achieve both the annual business plan and the longer-term strategic objectives of the Company. This includes levels of bonus deferral and the potential for deferred shareholding awards to align EDs' interests with those of shareholders and aid retention of key personnel. This is compliant with EIOPA requirements. As well as rewarding the achievement of objectives, variable remuneration can be zero if performance thresholds are not met.

Remuneration of EDs is split between the following components:

- Basic salary informed by individual and business performance, levels of increase for the broader Company employee population and relevant pay data;
- Variable components (refer to section 'Variable components' below for further details);
- Pensions;
- Benefits; and
- Relocation and mobility.

Variable components

The main forms of variable remuneration for EDs are:

- Annual bonus: Awards are based on performance in the year. Performance is assessed against a range of relevant financial, employee, customer and risk targets designed to incentivise the achievement of strategy as well as individual strategic objectives. Targets are set annually, and pay-out levels are determined based on performance against those targets. A significant proportion of any bonus award is deferred into shares which vest in three equal tranches; and
- Restricted Share Units (RSUs): Shares are awarded based on in year performance and vest after a three-year period.

All variable pay elements are subject to Aviva's 'Malus and Clawback' policy.

Base salaries are benchmarked externally on an annual basis. Total remuneration is leveraged, with a suitable percentage of pay 'at risk' against the achievement of stretching goals, which is aligned with the Company's risk profile and employee behaviour to ensure there is no excessive risk taking.

B.1.4.2 NEDs

INEDs receive a basic annual fee in respect of their Board duties. Further fees are paid for Board committee membership and, where appropriate, chairing Board committees. The Chairperson receives a fixed annual fee. Fees are reviewed annually taking into account market data and trends and the scope of specific Board duties.

The Chairperson and other INEDs do not participate in any incentive or performance plans or pension arrangements and do not receive an expense allowance.

The Chairperson and other INEDs are reimbursed for reasonable expenses, and any tax arising on those expenses is settled directly by the Company.

The NEDs are remunerated by fellow subsidiaries of Aviva plc for their services and executive employment with the Aviva Group. They are not remunerated for their service as board directors of the Company.

B.1.4.3 Other Employees

Remuneration arrangements for employees that are not EDs take account of the seniority and nature of the role, individual performance and local market practice. The components and levels of remuneration for different employees may therefore differ from the policy for EDs. Any such elements are reviewed against market practice and approved in line with internal guidelines and frameworks.

Variable components are discretionary and fully flexible as opposed to a contractual entitlement, and there is a possibility of zero awards being made should the performance of the Company and/or individuals require this (other than where payments are required by law). Individual awards are based on an assessment of performance of individuals allowing for differentiation.

The remuneration of employees in the Risk, Compliance, Actuarial and Internal Audit is determined independently of the financial results of the business areas they oversee. This reinforces the independence of these Functions.

Shares in the ultimate parent company can be awarded to employees. These vest after three years.

B.1.4.4 Pension and early retirement schemes

The Company did not operate any enhanced pension arrangements or early retirement schemes during the reporting period.

B.1.5 Material transactions with the shareholder, persons with significant influence on the Company and members of the Board

No material transactions have been identified during the period with persons who exercise a significant influence on the undertaking, or with members of the administrative, management or supervisory body.

Key management personnel, being those having authority and responsibility for planning, directing and controlling the activities of the Company, including the directors, may from time-to-time purchase insurance, savings, asset management or annuity products marketed by Group companies on equivalent terms to all employees of the Group. In 2025 other transactions with key management personnel were not deemed to be significant either by size or in the context of their individual financial positions.

Information on the material transactions with the Company's shareholder is included within Note 31 – 'Related party transactions' of the Company's financial statements.

B.2 Fit and Proper Policy

The business has policies in place to ensure that individuals responsible for running the Company or responsible for key functions are both "fit" and "proper" in line with the CBI's Fit and Proper requirements for individuals. The CBI's Fitness and Probity Regime applies to persons in senior positions, known as Pre-Approval Controlled Functions (PCFs) and Controlled Functions (CFs), within Regulated Financial Service Providers. This means that, as part of recruitment and employee screening, an individual's career history will be assessed and validated to establish whether an individual's skills and knowledge are appropriately matched to the role. It also means that checks are in place to ensure that an individual is honest, of good reputation, has integrity and is financially sound. The Fit and Proper standards are relevant to assessing the suitability of individuals before appointment and on an ongoing basis while performing a PCF or CF.

The governance over the fitness and probity of individuals includes recruitment, performance management and training. However, to ensure that the Company protects itself against employing individuals who potentially could threaten its customers, properties, facilities or reputation, the focus of its fitness and probity processes take place at recruitment and more specifically at pre-employment screening. A minimum set of basic screening requirements has been agreed and implemented. Additional enhanced screening requirements are applied for individuals who will run the Company or become notified or approved PCFs. This enhanced due diligence is performed during both the internal and external recruitment process. Under the CBI requirements, before the Company can appoint a person to a PCF role,

the CBI must have approved the appointment in writing. Annual recertification and due diligence checks are completed for all PCF role holders to ensure they remain fit and proper for the role.

The Company's requirements in respect of skills, knowledge and expertise for key function holders are set following engagement with both internal and external subject matter experts in each specialism. These requirements and qualifications are captured within individual role descriptions for each key function role.

The CBI's Individual Accountability Framework introduced an enhanced fitness & probity certification requirement for all PCF/CF roles and new Common and Additional Conduct Standards with effect from 29 December 2023; these were implemented within the Company, with the new standards applicable to all CF and PCF roles from that date. The obligation to ensure, and to certify, that fit and proper individuals occupy CF and PCF roles applies on an ongoing basis. The Company maintains ongoing oversight of individuals in PCFs and CFs roles and addresses any concerns or changes pertaining to an individual's fitness and probity.

The CBI's Revised Fitness & Probity Guidance 2025, published in November 2025 following consultation earlier in the year, replaces the 2023 version and accompanies the new consolidated Fitness and Probity Standards 2025. Effective from 20 November 2025, the updated Guidance clarifies the Central Bank's expectations around competence assessments and due diligence obligations, reflecting a more proportionate approach. It also introduces greater flexibility for firms by allowing the appointment of Temporary Officers to vacant PCF roles for up to six months, subject to CBI approval.

The Senior Executive Accountability Regime (SEAR) came into effect from 1 July 2024 requiring the roles and responsibilities of PCF role holders to be documented in a prescribed format aiding transparency on where responsibility, accountability and decision-making for key activity lies within the firm.

B.3 Risk Management System including the Own Risk and Solvency Assessment

B.3.1 Risk Management Framework

The Company's Risk Management Framework forms an integral part of management and Board processes and the decision-making framework across the Company. The key elements of the Risk Management Framework comprise:

- **Systems of Governance:** These include risk policies and business standards, risk oversight committees and structures, and roles and responsibilities (including the three lines of defence model and key control functions);
- **Risk Management Processes:** These comprise of the processes used to Identify, Measure, Manage, Monitor and Report (IMMMR) risks, including the use of SST; and
- **Risk Appetite Frameworks:** These refer to the risks that are selected in pursuit of return, the risks accepted but sought to be minimised and the risks avoided or transferred, including quantitative expressions of the level of risk that can be supported.

For the purposes of risk identification and measurement, risks are usually grouped by risk type: Financial (incl. credit, market and liquidity), general, and health (non-life) insurance and operational risk. Risks falling within these types may affect a number of metrics, including those relating to balance sheet strength, liquidity and profit. They may also affect the performance of products delivered to customers and service provided to customers and distributors, which can be categorised as risks to brand and reputation or as conduct risk. The definition of those risks is documented in Aviva's Risk Taxonomy.

To promote a consistent and rigorous approach to risk management the Company has adopted a number of risk policies and business standards which set out the risk strategy, appetite, framework and minimum requirements for its operations. Compliance with these policies and standards is confirmed annually.

A regular top-down key risk identification and assessment process is carried out by the business and supported by the Risk Function. This includes the consideration of emerging risks and is supported by deeper thematic reviews. This, together with the Risk and Control Self-Assessment ("RCSA") process, are the main processes used to IMMMR risks. The RCSA process is run by the first line, with challenge by the Risk Function. It focuses on operational risks, which are recorded on 'iCARE', the Company's operational risk management system. These two risk assessment processes are run separately but are complementary. They are used to generate risk reports which are shared with the relevant risk committees and Group.

SST is an important tool in the measurement of risks and is used to support the monitoring and reporting of the risk profile and in the consideration of the risk management actions available. A range of stress (where one risk factor, such as interest rates, is assumed to vary) and scenario (where combinations of risk factors are assumed to vary) tests are undertaken to evaluate their impact on the business and the management actions available to respond to the conditions envisaged.

The Risk Function is accountable for quantitative and qualitative review and challenge of the IMMMR process and for developing and maintaining the Risk Management Framework. Internal Audit provides an independent assessment of the risk framework and internal control processes.

Board oversight of risk and risk management is maintained on a regular basis through the Risk Committee. The Board has overall responsibility for determining risk appetite, which is an expression of the risk the business is willing to take. There are qualitative and quantitative risk appetites in respect of the key risks while risk preferences specify where the Company takes risk and why. In addition, operating risk limits and tolerances exist below the overarching risk appetites.

The Company's position against risk appetite is monitored and reported to the Board on a regular basis. Long-term sustainability depends upon the protection of franchise value and good customer relationships. As such, the Company prefers not to accept risks that materially impair the reputation of the Company and requires that customers are always treated with integrity.

An Executive Risk Committee (ERC) is in place; this is a management committee chaired by the Chief Risk Officer (CRO). The objective of the Committee is to provide formal oversight of all risks and to support the CRO and other members of the Committee in the discharge of their accountabilities within the Aviva Governance Framework and in relation to their defined regulatory responsibilities. The oversight of risk and risk management is also supported by the Asset and Liability Committee (ALCO), the Insurance Committee, the Reinsurance Committee, the Reserving Committee and the Executive Committee.

To further support the role of risk management in decision-making processes, the role of the 'first line' is critical as part of the three lines of defence model. The CEO together with their delegates are responsible for the implementation of the Company's strategies, plans and policies, the monitoring of operational and financial performance, the assessment and control of financial, business and operational risks and the maintenance and ongoing development of a robust control framework and environment in their areas of responsibility.

B.3.2 Risk Function

The Risk Function is responsible for the design and implementation of the Risk Management Framework. The role of the Risk Function is defined in the Risk Charter. The Risk Function reports to the Company's Board on material risks, together with any other specific areas of risk requested by the Board, and assists the Board, Risk Committee and management in the effective operation of the Risk Management Framework including, amongst other things, the provision of quality reviews, an aggregated view of the risk profile, and an assessment of the key risks associated with the business's strategy, major projects, strategic investments and other key decisions.

The Risk Function has authority to review all areas of the Company and has full, free and unrestricted access to all activities, records, property and personnel necessary to complete its work. The CRO has direct management accountability for the Risk Function. Appointment and removal of the CRO are matters reserved for the Board, on the recommendation of the Risk Committee, which supports the independence of the Risk Function. In addition, the CRO is a standing attendee at Board meetings.

B.3.3 Own Risk and Solvency Assessment

The Company defines the ORSA as the set of processes that ensure forward-looking assessment of its risk profile, capital needs, and solvency position. It is a continuous process embedded across the strategy, business planning, capital management, and risk management cycles.

The Board has approved the ORSA Policy, which sets out the approach, frequency, governance, and triggers for out-of-cycle ORSA updates. Under this policy, the ORSA:

- Considers both short-term and long-term risks.
- Integrates strategic, underwriting, market, operational, and liquidity considerations.
- Includes both quantitative (e.g. stress & scenario testing) and qualitative assessments (e.g. emerging risks).

Review and approval

The outputs from the ORSA processes are reported to and reviewed by the Board and the Risk Committee regularly during the year. The Risk Committee sets the approach to the ORSA and, on behalf of the Board, oversees the ORSA processes including the identification of risk. The results of the Company's ORSA processes are considered by the Board when reviewing the Company's strategy and approving the business and capital plan on an annual basis. Additionally, the ORSA is used to inform risk appetite calibration, reinsurance purchasing, and assessment of emerging risks.

The annual ORSA Report brings together and summarises a high-level description of the key components of ORSA, together with key developments and outcomes during the year. It provides a forward-looking assessment of the risk and solvency needs of the Company over a 3-year time horizon, reflecting the company's strategy and business plans. Additionally, it considers climate change impacts over short (0-5 years), medium (5-15 years), and long-term (15+ years) periods. The ORSA processes and associated ORSA report play a key role in supporting decision making and strategy development at the Company's Board and Risk Committee.

The ORSA Report is produced by the CRO and approved by the Board at least annually. In addition, an out-of-cycle ORSA Report may be considered where there is a potentially material change in the Company's risk profile. Triggers include:

- A significant change in business strategy or risk drivers;
- A material loss event or significant change in Own Funds;
- Any other development which could materially affect the Company's solvency position or risk profile.

The CRO assesses whether an out-of-cycle ORSA is warranted and provides a recommendation to the Board which makes the final decision.

The Company performs regular SSTs as part of the ORSA to assess resilience to a range of severe but plausible scenarios. Scenarios may include economic, insurance, climate-related, operational, and combination stresses. The ORSA also includes reverse stress testing to identify scenarios that could threaten viability. This analysis supports the Board in understanding the Company's capacity to withstand adverse conditions and the management actions available.

As part of the ORSA, the Company assesses its own solvency needs, taking account of its business model, strategy, risk profile and risk appetite. The Company's solvency risk appetite is set through a structured process that considers regulatory expectations, stress and scenario analysis, and the level of resilience required to protect policyholders. The ORSA confirms that the Company's solvency position remains appropriate and aligned with this risk appetite framework.

The ORSA Report is produced by the CRO and approved by the Board at least annually. Following Board approval, the supervisory ORSA is submitted to the Central Bank of Ireland.

B.4 Internal Control System

B.4.1 System of Internal Control

The Company's principles for ensuring effective internal control are set out in the Risk Management Framework. These include:

- An appropriate "tone from the top". This supports the effective management of exposures, adequate resourcing, effective communication, malpractice reporting, a business ethics code that is annually signed up to by employees, and a commitment to integrity, ethical behaviour and compliance;
- A clear organisational structure that supports the system of internal control and includes the effective operation of an adequately resourced three lines of defence model, appropriate and proportionate segregation of duties, a clear system of delegated authorities, clearly defined roles and responsibilities for staff, and the consideration of risk management and control responsibilities when setting objectives for, and reviewing the performance of, all staff;
- Implementation of risk policies and business standards, and consistent IMMRR of all risks;
- Effective controls for each of its core business processes which are regularly monitored and reported on; and
- A risk oversight process that provides adequate challenge to the completeness and openness of internal control and risk assessment.

B.4.2 Compliance Function

The primary purpose of the Compliance Function is to assess, manage and report exposure to regulatory risk. The role of the Compliance Function is defined in the Compliance Charter. The Compliance Function is an integral part of the Company's Risk Management Framework and constitutes a key part of the Company's corporate governance, including relationships with the CBI and other regulatory bodies. The function is a critical contributor to the safe and sound operation of the Company and underpins the achievement of its strategy and business goals.

The Head of Compliance has responsibility for the Conduct Regulatory Risk management to support a customer centric culture across the company and the CRO has responsibility for the Prudential Regulatory Risk management, whilst the Head of Legal is responsible for monitoring legal developments.

The key processes that comprise the Company's compliance activity are:

- Conduct Regulatory Risk management (including monitoring regulatory developments), performed by the Compliance Function (including Financial Crime) and including activities such as:
 - Setting the conduct and financial crime policy framework;
 - Providing advice, support, guidance and challenge on conduct and financial crime risk; and
 - Managing conduct and financial crime regulatory engagement.
 - Providing regulatory compliance and conduct reporting to Board committees, Group Compliance & Conduct for Group reporting, and relevant regulators or statutory bodies.
- Prudential Regulatory Risk management (including monitoring regulatory developments), performed by the Risk Function and including activities such as:
 - Setting the prudential regulatory risk policy framework;
 - Providing advice, support, guidance and challenge on prudential regulatory risk; and
 - Managing the prudential regulatory engagement.
- Legal developments monitoring (including those related to data protection), performed by the legal and company secretarial function.

Those carrying out compliance activities have authority to review all areas of the Company and have full, free and unrestricted access to all activities, records, property and personnel necessary to complete their work, where appropriate.

B.5 Internal Audit Function

B.5.1 Role and Responsibilities

Internal Audit's (IA) purpose is to help the Company's Board and Executive Management to protect the assets, reputation and sustainability of Aviva in servicing its customers by providing independent risk based and objective assurance, advice, insight and foresight designed to add value and improve Aviva's operations.

IA does this by assessing and reporting to the Company's audit, risk and governance committees and to management as appropriate on the effectiveness of the design and operation of the framework of controls, the effectiveness of management actions to address the deficiencies in the framework of controls and whether all significant risks are identified, managed appropriately and reported by management to the Board and executive management.

IA undertakes this work in accordance with its mandate set out in the IA Charter and in conformance with the Institute of Internal Audit (IIA) Standards and the Chartered Institute of Internal Auditors (CIIA) code for Effective Audit in Financial Services.

B.5.2 Independence and objectivity of the internal audit function

IA must always be independent from management in order to be effective in performing its activities. The arrangements to protect the independence of IA are set out below:

- The Company's IA team is led by the Company's Chief Audit Officer (CAO) who has a dotted reporting line into the Chairperson of the Audit Committee and a functional reporting line to the UK IWR Chief Audit Officer who in turn reports to the Group Chief Audit Officer.
- The Company's Audit Committee has a duty to recommend the appointment or dismissal of the Company's CAO to the Company's Board. The Company's Audit Committee has input in the determination of the objectives of the Company's CAO and the evaluation of their levels of achievement, including consultation with the Company's CEO.
- The Head of Quality Assurance (QA) monitors and evaluates the IA function's adherence to all relevant IA standards of practice and Internal Audit methodology. An independent external assessment of the IA function is performed every three years, most recently by PricewaterhouseCoopers in 2025.
- Independence and objectivity are confirmed through a declaration form signed annually by all members of IA staff. Staff working in IA have no direct responsibility or authority over any operational activities reviewed and should not relieve others of such responsibilities, and IA manage a staff rotation process to ensure that independence is maintained.
- IA staff who previously worked in Aviva Group, but outside of IA, will not perform or manage reviews in the business area for which they were previously responsible for a period of at least one year after the end of their role within the business. This excludes similar business areas in other legal entities or operating units. Internal auditors on rotation from a business unit will not perform or manage reviews in the business area for which they were previously responsible.

B.5.3 Authority and resources of the internal audit function

IA is authorised to review all areas of the Company's operations, including shared services provided to the Company by other teams within the Aviva Group and has full, free and unrestricted access to all activities, records, property, and personnel necessary to complete their work. The scope of IA activities extends to all legal entities, joint ventures and other business partnerships, outsourcing and reinsurance arrangements. The Company's CAO shall propose a budget which ensures that IA has appropriate skills and resources to discharge its responsibilities.

B.6 Actuarial Function

The Actuarial Function is accountable for actuarial methodologies, plus the resultant Best Estimate Liabilities and capital requirements. The Actuarial Function produces an annual report to the Board with its opinion on the adequacy of Technical Provisions, the Company's underwriting and reinsurance arrangements, and the ORSA processes.

The independence of the Actuarial Function is derived through its reporting line to the CEO and its direct access to the Board. The Actuarial Function is led by the Chief Actuary, who reports to the Company's CEO. The Chief Actuary is subject to the Fit and Proper policy requirements (considered in section B.2) to ensure they have the requisite skills and knowledge to complete their responsibilities, and is also subject to the requirements outlined in the Central Bank of Ireland's Domestic Actuarial Regime.

The Actuarial Function has the authority to review all areas of the Company and has full, free and unrestricted access to all activities, records, property and personnel necessary to complete its work.

B.7 Outsourcing

Policy

The Company's Outsourcing and Information and Communication Technology (ICT) Supplier Policy, and Procurement and Outsourcing Business Standard contain information setting out the relevant governance, responsibilities, objectives, process, and monitoring arrangements to be applied in cases of outsourcing, all of which shall be consistent with the overall strategy. The requirements apply equally to any externally or internally (intra-group) outsourced activity including ICT activities. The Outsourcing and ICT Supplier Policy sets out the oversight and governance requirements the Company must comply with to ensure adherence to local regulatory requirements and Aviva Group requirements, to the extent such requirements are consistent with and additional to local requirements. The objective of the Business Standard is to ensure that minimum control objectives and controls for supplier-related activities are followed by all elements of the business, to ensure that supply risk is managed effectively, customers are being treated fairly and continue to receive good outcomes, as well as mitigating potential financial, operational, contractual, or brand damage caused by inadequate management and oversight. The Outsourcing and ICT Supplier Policy and the Business Standard align with regulatory expectations, and where appropriate, regulatory guidance, including the Central Bank of Ireland's Cross-Industry Guidance on Outsourcing and Digital Operational Resilience Act requirements, are applied as a requirement. The Business Standard applies to all staff involved in supplier-related activities and provides direction to staff on their roles and responsibilities in effectively managing supplier activity. The Policy and Business Standard provide clarity on the definition of outsourcing, including where activity is delegated to an intermediary, and whether an outsourced function or activity is assessed as critical or important. All staff have a responsibility to comply with this Business Standard if they are involved with supplier-related activity.

The Outsourcing and ICT Supplier Policy covers the following:

- Requirements and limitations on outsourcing and ICT suppliers pursuant to local regulations;
- ICT Supplier definitions in line with Digital Operational Resilience Act;
- Definitions and details on roles, responsibilities and escalation processes for outsourcing and ICT Supplier management and oversight;
- Defined criticality assessment process;
- Key outsourcing and ICT Supplier risk assessment activities and documentation requirements;
- Supervisory notification requirements; and
- Requirements for establishing and monitoring supplier business continuity/operational resilience plans.

In addition, the Outsourcing and ICT Supplier Policy was approved by the Board Risk Committee and noted by the Board in June 2025. The Policy incorporates the objectives and controls in the Business Standard which cover the following areas:

- Supply Governance: business oversight of operational performance for sourcing and supply management activities;
- Sourcing: how a service provider of suitable quality is selected;
- Supplier Contracting and Approvals: financial, commercial and legal approval of contracts; and
- Supplier Management and Business Continuity: risk-based approach to management of supply contracts.

Critical or important outsourcing attracts the highest level of rigour, including regulatory notification, performance and relationship reviews, regulatory compliance reviews, and risk and control assessments.

Critical and important outsourced functions and activities

The Company outsources a range of activities consistent with its outsourcing strategy. These include elements of underwriting, customer contact (including claims handling), IT, accounting services and investment management. The Company recognises that while it can outsource activities, it cannot outsource its statutory or regulatory obligations (prudential or conduct) and as such operates effective oversight arrangements for outsource providers.

Information and Communication Technology Outsourcing

The Company outsources certain Information and Communication Technology (ICT) services to support its operations. These services include system hosting, application support and other technology-related functions. The Company assesses whether any ICT activity is critical or important in line with Solvency II requirements and applies appropriate oversight to those activities. The Company remains fully responsible for meeting all regulatory and statutory obligations. It maintains controls to oversee ICT service providers, including performance monitoring, information-security requirements, and business-continuity expectations. These measures ensure that outsourced ICT services operate securely, reliably, and in a manner that supports the Company's operational resilience.

Jurisdiction of service providers

Critical or important outsourced activities are carried out mostly in the UK or Ireland, with support functions in Luxembourg, India and Sri Lanka:

- Capital Management and Actuarial – UK;
- Finance Operations and Accounting Services – UK, India, and Sri Lanka;
- IT – UK and India;
- Claims Handling – UK and Ireland;
- Policy Administration – Ireland and India;
- Customer Communications – Ireland and India;
- Investment Management – UK and Luxembourg; and
- HR Service - UK

B.8 Any Other Information

The Company has no other material information to disclose.

In this Chapter

C.1	Underwriting Risk	19
C.2	Market Risk	21
C.3	Credit Risk	22
C.4	Liquidity Risk	23
C.5	Operational Risk	24
C.6	Other Material Risks	25
C.7	Any Other Information	26

C. Risk Profile

The 'Risk Profile' section of this report provides information on the key risks encountered by the Company as well as the corresponding processes for monitoring the risk exposures and the techniques in place for mitigating these risks.

C.1 Underwriting Risk

C.1.1 Exposure

The Company's exposure to non-life and health insurance underwriting risk is predominantly in Ireland and arises from:

- Inadequate claims reserving assumptions;
- Unforeseen fluctuations in the timing, frequency and severity of claims and claim settlements relative to expectations;
- Unexpected claims arising from a single source;
- Inaccurate pricing of risks or inappropriate underwriting of risks when underwritten; and
- Inadequate reinsurance protection or other risk transfer techniques.

The Company does not underwrite life insurance business.

The Company has a preference for general and health (non-life) insurance risk in measured amounts for explicit reward, in line with its core skills in underwriting and pricing.

On 1 February 2019, the Company entered into a quota share reinsurance arrangement with its parent company. This agreement provides proportional reinsurance to the Company as follows:

- 70% quota share arrangement in respect of general and health (non-life) insurance risks arising in Ireland;
- 85% quota share arrangement covering European Mobile Device Insurance business in run off; and
- 100% quota share arrangement covering all other business.

The Company's underlying exposure to underwriting risk has increased on a gross basis and consistent with new business written in the year.

The Company's overall exposure to underwriting risk is measured using the SCR. QRT S.25.01 (Appendix F.1.7) shows that the Company's undiversified SCR for non-life underwriting risk is €100m (2024: €100m), and for health underwriting risk is €3m (2024: €1m).

Underwriting risk is also measured and monitored in terms of best estimate liabilities, total sum insured and estimated maximum loss. Estimated maximum loss is an estimation of the maximum loss that could be reasonably sustained as a result of a single incident considered to be within the realms of probability. The health underwriting risk is attributable to the joint venture entered into through which the Company began writing Health Insurance in 2024. There have been no other material changes to the measures used to assess underwriting risk during the reporting period.

C.1.2 Risk concentration

The Company avoids underwriting risk concentration through its scale, geographical distribution of underwriting risks, diversity of product lines and diversity of distribution channels. Individual risks and groups of risk are only accepted if, after diversification and reinsurance, the residual risk is within appetite. Controls are in place to ensure accumulations of risk are identified, evaluated and controlled.

The Company's general and health (non-life) insurance risk is located predominantly in Ireland. The most material single event peril for the Company is considered to be windstorm.

C.1.3 Risk mitigation

The Company manages its exposure to general and health (non-life) insurance risk through the application of control frameworks that include:

- Claims reserving that is undertaken by experienced claims handlers and actuaries and is also subject to periodic internal and external review;
- Risk appetites to limit exposures to key general insurance risks;
- Extensive use of data, financial models and analysis to improve pricing and risk selection;
- Underwriting limits linked to delegations of authority that govern underwriting decisions;
- Product development using a management framework that ensures products and propositions meet customer needs;
- Product limits and exclusions;
- Governance of outsourced functions writing products on behalf of the Company; and
- Documented claims management philosophies and procedures.

The primary technique used to mitigate underwriting risk is reinsurance. The Company's reinsurance strategy is designed to manage concentration, accumulation and catastrophe risk, the retention of which could cause unacceptable variance in the company's results or pose a threat to the solvency of the company. In some cases, the Company participates in Group reinsurance programmes, which leverage economies of scale whilst allowing the Company to trade to the full extent of its underwriting appetite.

The Company has a number of reinsurance agreements in place, with both internal and external counterparties, to mitigate underwriting risk. Major reinsurance agreements include:

- Catastrophe reinsurance providing protection against the risk of natural hazard events (e.g. flood, windstorm);
- The quota share reinsurance agreement with the parent company. Further details are provided in section C.1.1;
- Casualty excess of loss reinsurance providing protection against the risk of large losses arising from motor liability or general liability insurance; and
- Property excess of loss reinsurance providing protection against the risk of large losses arising from property insurance.

Reinsurance purchases are reviewed to verify that the levels of protection being bought reflect any developments in exposure and the risk appetite of the Company. The basis of these purchases is underpinned by financial and capital modelling and actuarial analyses which consider the cost and capital efficiency benefits. This may involve utilising externally sourced probabilistic models to verify the accumulations and loss probabilities based on specific portfolios of business. In addition to external models, scenarios are developed and tested using Company data to determine potential losses and appropriate levels of reinsurance protection.

The management of insurance risk is overseen by specific senior management committees, namely the ALCO, the Insurance Committee and the Reinsurance Committee.

C.1.4 Stress and scenario testing and sensitivity analysis

Stress and scenario testing helps to identify and measure the Company's exposure to risks and evaluate ways of mitigating or managing those risks. The scenarios are not intended to cover all eventualities, but aim to represent a balance between likely and unlikely risks to which the Company could be exposed over the 2026-2028 Plan.

The stress and scenario tests performed by the Company during 2025, included adverse economic conditions, change in reinsurance structures, catastrophic events, climate change, reserve deterioration, counterparty default and operational failings. The outcome of these tests demonstrated that the Company's solvency position and risk appetite statement are robust and can withstand a range of adverse scenarios over the Plan period. Part of this exercise involves considering what management actions could be taken to mitigate (pre-stress) the risks considered or to restore the Company's solvency position post-stress.

Descriptions of the methods used, assumptions made and outcomes of SST and sensitivity analysis are provided in section C.7.1.

C.1.5 Special purpose vehicles

The Company has not transferred underwriting risk to special purpose vehicles, as defined by the SII Directive.

C.2 Market Risk

C.2.1 Exposure

The Company's exposure to market risk arises from the risk of adverse financial impacts resulting directly or indirectly from fluctuations in interest rates, foreign currency exchange rates and in the value of its joint venture, Level Health Limited. Market risk arises due to fluctuations in both the value of liabilities and the value of assets held.

Interest rate risk arises primarily from the Company's fixed income securities and liabilities, which are exposed to fluctuations in interest rates. The Company seeks to match assets to liabilities on a Solvency II basis and uses interest rate derivatives to meet its interest rate appetite.

The Company's exposure to foreign currency risk arises primarily from investments in non-domestic currency denominated investments held to drive enhanced investment returns and provide diversification. The Company seeks to mitigate foreign currency risk on non-domestic denominated investments by the use of currency derivatives.

The Company's overall exposure to market risk is measured using the SCR. QRT S.25.01 (Appendix F.1.7) shows that the Company's undiversified SCR for market risk is €11m (2024: €10m). This includes credit risk in respect of the Company's bond holdings whose risk profile and management is described in section C.3. In addition to the SCR, a number of risk-specific metrics are used to monitor market risk at a granular level:

- Key interest rate and currency related indicators; and
- Changes in the price level of individual assets or specific asset classes.

Additional measures and longer term carbon intensity measures have been calculated since 2022 to assess the climate risk of individual investments. There has been no other material change to the measures used to assess market risk during the reporting period.

C.2.2 Risk concentration

The Company monitors its investment exposures in aggregate across all classes of financial instruments (debt securities, derivatives and other investments), to individual issuers, geographies, sectors, and asset classes.

The valuation of assets and liabilities are materially impacted by movements in market-implied interest rates with this risk being managed within pre-defined risk appetite and tolerances using a combination of asset-liability matching and derivatives.

C.2.3 Risk mitigation

The Company manages market risk within its financial risk policy, investment management policy, within local regulatory constraints and in line with established Group policy, including minimum principles for matching liabilities with appropriate assets. As described in section C.2.1, the Company monitors exposures to market risks and uses derivatives to mitigate interest rate and foreign currency exchange rate risks.

The Company only uses derivatives to reduce risks and facilitate efficient portfolio management. Risks arising from the use of derivatives for hedging purposes include basis risk, which is the risk of an unexpected adverse financial impact arising because the exposure covered by a risk-mitigation technique, such as derivatives, does not correspond to the Company's risk exposure. The Company controls derivative basis risk by applying strict controls to its processes for their administration and valuation. The Company's control framework for derivative risk is consistent with market and industry practice.

In accordance with the requirements of its Risk Management Framework, the Company assesses and documents the effectiveness of its arrangements to mitigate market risk. This assessment is initially undertaken prior to deciding whether or not to enter into an arrangement, and considers the impact of the proposed arrangement on key metrics including:

- Risk measures, including ALM and Solvency measures; and
- Financial measures, including, cash flow, IFRS operating profit, and liquidity.

If the initial assessment indicates that the impact on key metrics is material, further assessments are carried out at regular intervals throughout the duration of the arrangement. These assessments typically include stress testing and sensitivity analysis.

The Company conducts on-going monitoring of the effectiveness of market risk mitigation techniques by reporting management information and analysis to the ALCO. The appropriateness of the Company's asset allocation is reviewed by the Board annually and regular monitoring against these agreed targets is reported to ALCO. Investment performance analysis including actual returns against expected are also reported to the ALCO and the Board. Processes are also in place to monitor key economic data against pre-defined trigger points to enable appropriate oversight and actions to take place if economic conditions deteriorate, as set out in the Company's pre-prepared Recovery Plan.

C.2.4 Stress and scenario testing and sensitivity analysis

Descriptions of the methods used, assumptions made and outcomes of SST and sensitivity analysis are provided in section C.7.1.

C.3 Credit Risk

C.3.1 Exposure

The Company's exposure to credit risk arises from the risk that it will incur a financial loss from the default or failure of related, or third parties, to meet their payment obligations to the Company, or variations in market values as a result of changes in expectations related to these risks.

The Company takes credit risk to provide the returns required to satisfy policyholder liabilities and to generate returns for its shareholders. The Company invests in those assets/asset classes, the risks of which the Company has the skills and expertise to assess and therefore understand. In general the Company prefers to take credit risk over direct equity and property risks, due to the lower risk profile, its credit risk analysis capability and the structural investment advantages conferred to insurers with long-dated, illiquid liabilities.

The Company's approach to managing credit risk recognises that there is a risk of adverse financial impact resulting from fluctuations in credit quality of third parties including default, rating transition and credit spread movements. The Company's credit risks arise principally from exposures to reinsurance counterparties, debt securities, insurance debtors and other assets such as bank deposits and derivative counterparties.

The Company's management of credit risk includes implementation of credit risk management processes (including limit frameworks), and detailed reporting and monitoring of exposures against pre-established risk criteria. The management of credit risk is overseen by the ALCO.

The principal basis used to measure the Company's exposure to counterparty risk is the SCR. QRT S.25.01 (Appendix F.1.7) shows that the Company's undiversified SCR for counterparty risk is €26m (2024: €24m).

Counterparty risk relates to the risk associated with reinsurers and insurance debtors. The Company is additionally exposed to the credit risk associated with investment bond holdings included in the market risk SCR reported in the QRT as described in section C.2.1. The following metrics are also used by the Company when measuring and assessing its credit risk exposure and to support risk management actions and investment decisions:

- Maximum exposure: credit exposure of the Company's financial assets to counterparties;
- External credit rating: available Moody's, Standard & Poor's and Fitch ratings;
- Market adjusted credit ratings: external credit ratings modified for the market price of the counterparty's credit default swap; and
- Internal credit ratings: determined for broker counterparties that are not externally rated, using methodologies broadly consistent with those used by external rating agencies.

The Company's exposure to counterparty risk has been stable across the reported period. There has been no material change to the measures used to assess credit risk during the reporting period.

The overall credit quality of the Company's financial investments is strong. At 31 December 2025, investment grade debt securities (external credit rating AAA to BBB) comprised 100% (2024: 100%) of total directly-held debt securities, with 55% rated AAA, 21% rated AA and 24% A. Reinsurance assets with external credit ratings of AAA to A- comprised 100% (2024: 100%) of total reinsurance assets.

C.3.2 Risk concentration

The Company's credit limit framework restricts investment in individual issuers, geographies, sectors, and asset classes to ensure the Company is not exposed to significant concentrations of credit risk.

The Company's largest reinsurance counterparty is the parent company. At 31 December 2025, the reinsurance asset recoverable from the parent company on an IFRS basis is €867m (2024: €801m). The parent company has a strong credit rating (S&P AA-), in addition, credit risk is further mitigated by a floating charge over ALL's assets.

The Company's main concentration of external credit risk arising from investment bond holdings is global debt securities. At 31 December 2025 the Company directly held €203m (2024: €206m) of worldwide government debt (including Supranationals, Sub-Sovereigns and Agencies (SSAs)). In addition, the Company directly holds €322m (2024: €305m) of corporate bonds, and collective investment undertakings of €132m (2024: €141m). The increase in investment bond holdings from the prior reported period is a result of the investment of cash assets held within the business, through the change in the Strategic Asset Allocation.

C.3.3 Risk mitigation

Risk mitigation techniques are used where and when deemed appropriate. These are utilised, where possible, to remove residual unwanted risks, as well as to bring or keep exposure limits within appetite.

As described in section C3.1 and C.3.2, the Company has in place a credit control framework to manage credit risk, and uses techniques including collateralisation and a floating charge arrangement to mitigate unwanted credit risk.

On-going monitoring is carried out by reporting management information to the ALCO, against pre-defined trigger points, to enable appropriate oversight and to prompt action if effectiveness deteriorates, as set out in the Company's pre-prepared response plans.

C.3.4 Stress and scenario testing and sensitivity analysis

Descriptions of the methods used, assumptions made and outcomes of SST and sensitivity analysis are provided in section C.7.1.

C.4 Liquidity Risk

C.4.1 Exposure

The Company's exposure to liquidity risk arises from the risk that its liabilities cannot be settled, in a timely and cost-effective manner, as they fall due because of insufficient liquid assets. Liquidity risk may arise from uncertainty of the value and timing of liabilities or the ability to realise assets to produce cash to meet obligations. The Company assesses liquidity risk under a range of scenarios and various levels of liquidity stress. The Company seeks to hold an efficient level of liquidity across the firm, matching the liquidity characteristics of its assets and liabilities as far as possible (taking appropriate account of the changes in those characteristics in stressed conditions). Sources of liquidity risk include:

- Insurance underwriting e.g. catastrophe claims arising from adverse weather events;
- Failure to receive payment from customers, brokers and reinsurers;
- Variances of actual operational cash flow from shorter-term forecasts; and
- Other cash flow volatility e.g. derivative and collateral calls arising from the Company's risk mitigation activities.

The principal bases used to measure and assess the Company's exposure to liquidity risk are liquidity coverage ratios, which measure absolute liquidity coverage relative to pre-defined liquidity risk appetites, and the quantum of certain liquid assets. Liquidity coverage ratios measure the extent to which available liquidity is sufficient to meet expected liquidity requirements following an extreme liquidity-specific stress event over short-term and long-term stress scenarios.

There has been no material change to the measures used to assess liquidity risk during the reporting period.

The Company's liquidity profile was maintained within appetite on both absolute and stressed liquidity coverage ratio bases, over both short-term and long-term scenarios, and overall there was no material movement in the Company's liquidity position.

C.4.2 Risk concentration

The credit limit framework described in section C.3.2 above also avoids concentrations of liquidity risk by preventing investment in a restricted number of issuers, asset classes and sectors. The Company has set its investment strategy to ensure it has sufficient liquid funds to meet its expected obligations as they fall due. The diversity of sources of liquidity available to the Company averts concentration of liquidity risk.

C.4.3 Risk mitigation

The Company manages its liquidity risk by considering the liquidity impact before accepting new risks and managing its existing liquidity profile by:

- Daily monitoring of projected cash flow needs;
- Setting an investment strategy which reflects liquidity requirements and the potential liquidity profile of liabilities;
- Setting liquidity risk appetites which require that sufficient liquid resources be maintained to cover net outflows in a stress scenario over a range of timeframes;
- Setting minimum cash reserves to be held at all times; and,
- Maintaining a Recovery Plan which detail management actions to address liquidity funding requirements in a significant stress scenario.

The Company monitors the effectiveness of liquidity risk mitigation techniques as follows:

- The internal controls, that enable effective liquidity risk management, are subject to assurance testing to ensure they operate effectively; and
- Short term and long term liquidity coverage ratios, calculated from actual and projected liquid resources, cash inflows and outflows, as well as maturity analyses on insurance liabilities and financial assets, in both normal and stressed scenarios, are regularly reported to and monitored by the ALCO, against pre-defined trigger points to enable appropriate oversight and identify any appropriate actions.

C.4.4 Expected Profit Included in Future Premium (EPIFP)

The amount of EPIFP, calculated in accordance with Article 1 of the SII Regulations and included within the valuation of the Company's Technical Provisions as at 31 December 2025, is €10m (2024: €9m), See the Own Funds QRT S.23.01.01 at Appendix F.1.6.

C.4.5 Stress and scenario testing and sensitivity analysis

Descriptions of the methods used, assumptions made and outcomes of SST and sensitivity analysis are provided in section C.7.1.

C.5. Operational Risk

C.5.1 Exposure

The Company's exposure to operational risk arises from the risk of direct or indirect loss, caused by inadequate or failed internal processes, people and systems, or external events including changes in the regulatory environment. The Company has a limited appetite for operational risk and aims to reduce these risks as far as commercially sensible.

Conduct risk, an element of operational risk, is the risk that the Company does not achieve fair outcomes for its customers or the markets in which it operates, and the impact on its regulatory relationships. Management of conduct risk is a key priority for the Company across the whole lifecycle of its products, and throughout the end to end journey of its customers, with robust governance and metrics embedded across the organisation.

The Company also seeks to manage its exposure to reputational risk, which is the risk of loss to the Company's franchise value from damage caused to the Company's brands or reputation. Examples of factors, regardless of whether authenticated or not, which could damage the Company's brands or reputation include litigation, employee misconduct, operational failures, the outcome of any regulatory investigations, media speculation and negative publicity, disclosure of confidential client information or inadequate services.

The Company's strategy of digital customer interaction, its use of advanced data analytics and the increasing cyber security threat, together with regulators' attention to conduct issues, has increased its inherent exposure to risks such as data theft, conduct breaches and customer service interruption arising from IT systems failure. These risks are expected to continue to increase into the future. The Company has sought to contain and reduce exposure to these risks through on-going investment in programmes to improve IT security and operational resilience, disaster recovery, data governance and outsourcing.

The Company oversees the management of controls for the current risks generative artificial intelligence presents to ensure these remain effective as well as exploit the opportunities for process efficiency, better pricing and underwriting, product personalisation and improved customer service.

Operational risks are initially identified and assessed against implemented controls (see Risk Management Framework detailed in section B.3.1). Residual risk, outside tolerance, is given prioritised management action to reduce it within tolerance. Operational risk is quantitatively assessed on the basis of financial loss and misstatement. Potential reputational and conduct impacts are qualitatively assessed. The Company also produces specific conduct risk management information used to measure and analyse its exposure to conduct risk.

There has been no material change to the measures used to assess operational risk during the reporting period.

The Company holds economic capital, based on the SII Standard Formula ("SF") approach, against operational risk. QRT S.25.01.21 (Appendix F.1.7) shows that the Company's SCR for operational risk is €36m (2024 €35m).

C.5.2 Risk concentration

The Company's scale and business model as a multi-business line and multi-channel business creates diversification of risks and generally helps to reduce concentrations of risks. The Company also works with a wide range of outsourcers to support delivery of its services and products. Further information is provided in section B.7.

The Company's operations (excluding outsourced functions) are carried out in four office locations in Dublin, Cork, Cavan and Galway. This limits concentration risk, and it is further mitigated through the Company's Business Continuity Plan ("BCP") which ensures continuity of service in the event of catastrophe. Since the COVID-19 pandemic in 2020, hybrid working has become prevalent increasing the physical diversification of the Company's operations.

The majority of the Company's products are sold under the 'Aviva' brand, enabling leverage on the strength of the brand and supporting delivery of the Company's business strategy. The Company is therefore vulnerable to any operational failures that adversely impact public perception of the 'Aviva' brand.

C.5.3 Risk mitigation

Operational risks are considered by the Company to be preventable and are managed through business controls. The Company's operational risk strategy is to improve its business processes to:

- Reduce operational risk and associated losses, thereby improving cost to income ratio and variability in financial performance;
- Improve customer outcomes and employee satisfaction; and
- Sustain customer confidence and a positive regulatory reputation.

The Company's business standards set out the minimum control objectives and controls that each business area is required to operate. Operational risk tolerances are quantitative boundaries that constrain specific risk-taking activities at an operational level.

The Company records and analyses operational risk events to ensure remedial action is taken, lessons are learnt and, if the event impacts customers, they are treated fairly. This includes risk events that do not give rise to a financial loss, such as near misses or fortuitous gains. This assessment enables the Company to highlight areas for improvement, implement corrective actions to avoid recurrence, and improve its understanding of operational risk.

Outsourcing, including through intra-group contracts, is strategically and operationally important for the Company. Risks arise from the ineffective design or operation of oversight controls and/or the failure or non-compliance of outsource providers, therefore the Company has established an Outsourcing and Supplier Management Committee of the Executive Committee. This Committee is responsible for ensuring that an up-to-date register of outsourcers is maintained and that the Outsourcing Risk Management Framework operates

effectively. In addition, the Company has created exit plans for outsourcing providers and disaster recovery plans in the event of IT failure, which are reviewed at least annually.

The Company's three lines of defence all monitor the effectiveness of the controls that are in place against operational risk. Further details of the three lines of defence are included in section B.1.1, including the specific roles and responsibilities of each line. Operational risk is overseen by the Operational and Conduct Risks Committee, which is a senior management committee, and the Board's Risk and Audit Committees.

C.5.4 Stress and scenario testing and sensitivity analysis

Descriptions of the methods used, assumptions made and outcomes of SST and sensitivity analysis are provided in section C.7.1.

C.6 Other Material Risks

The Company has identified other material risks which are regularly assessed and reported to management and the Board in order to appropriately steer risk-taking activities and to evaluate ways of mitigating or managing these risks.

Strategic Risk

This is the risk of loss from the pursuit of an unsuccessful business plan. It might arise from making poor business decisions, from the substandard execution of decisions, from inadequate resource allocation, or from a failure to respond well to changes in the business environment. The Company does not have a separate Strategic/Planning risks policy as these are treated either as causes of other risks (e.g. inappropriate distribution planning could cause increased claims) or as operational risks.

The Board is responsible for promoting the long-term success of the Company and for setting its strategy. It sets the risk appetites and satisfies itself that financial controls and risk management systems are robust. A strong system of governance throughout the entity aids effective decision-making and supports the achievement of the Company's objectives for the benefit of policyholders and the shareholder. The ORSA processes are an integral part of the business strategy and are taken into account on an ongoing basis when making strategic decisions. Similarly, the Operational Risk and Control ("ORCM") framework acts as a key enabler of the Company's strategic ambitions.

Climate Change Risk

The Company considers climate change to represent a significant risk to its customers, strategy, business model and wider society. The effects are already being felt and the Company is proactively addressing these through its risk management processes.

The Aviva plc second Transition Plan, published in February 2025, details its strategy and the approach it is taking to achieve its interim ambitions across its businesses.

Through its Risk Management Framework, the Company continues to identify, measure, monitor, manage and report on the risks to which its business, customers and wider society are, or could be, exposed to.

The Company has defined its climate risk appetite framework (including climate statements and preferences) to enable confident, risk-based decisions. The progress is reported quarterly to enable the Board and Senior Management to oversee and monitor the financial impact of climate change and ensure this is in line with the risk appetite and risk profile.

AllDAC use a variety of historical and forward-looking metrics to monitor and manage the delivery of the Aviva Sustainability Ambition over the short, medium and long-term. We incorporate climate and other sustainability related risks and opportunities into the Company's business plan and run climate stress and scenario testing using both qualitative and quantitative scenarios and ensure appropriate mitigating actions are in place.

For further details see the Aviva plc Climate-related Financial Disclosure 2025 report.

Emerging Risks

Risk identification is forward-looking to allow management to take proactive action. The Company's Top Down Risk Assessment is a continuous process that is designed to capture emerging risks, which includes external risks that can arise from events and trends that are beyond the Company's control. The risks are recorded on a risk spectrum and monitored and discussed on a regular basis by senior management. Management actions in anticipation of the risks crystallising may be contingent or pre-emptive.

The Company continues to respond to relevant EU legislation, in particular General Data Protection Regulation. The Data Protection Officer reports to the Risk Committee on a regular basis in order to keep the most senior levels of the organisation informed of the regulation and the results of monitoring of compliance.

Geopolitical tensions remain a source of external uncertainty, with several global flashpoints carrying potential implications for macroeconomic conditions, sanctions regimes, supply-chain stability, and cyber risk. The Company monitors these developments through its emerging risk process to assess potential impacts on claims inflation, investment performance and operational resilience.

Group Risk

There are many benefits of being part of a wider Group, but it also brings some risk. It could result in, for example, operational or financial dependence on other entities in the Group, the pursuit of Group-wide strategies that are inappropriate for the Company, or contagion within the Group, including impacts to reputation. This risk is identified and assessed through the ORSA and recovery plan processes, including stress testing of arrangements (e.g. reinsurance) with other Group companies.

C.7 Any Other Information

C.7.1 Stress and scenario testing and sensitivity analysis

SST is a fundamental element of the Company's Risk Management Framework which is embedded within the Company's decision-making, strategy and planning activities. SST provides insight into key risk exposures and dependencies of the Company; considering resilience of potential changes to these exposures and dependencies; and anticipating a range of possible outcomes. The evaluation of the potential impacts on the Company's capital and liquidity positions enables the Company to identify and prepare for appropriate ways to mitigate and manage the realisation of such impacts.

There are three main components of SST: (1) sensitivity analyses which consider single factor standalone impacts at a point in time to changes in economic and non-economic assumptions; (2) scenario analyses which consider impacts from specific potential events; and (3) the identification of plausible management actions.

The Company's stress and scenario methodology is based on the following stages:

- Identify existing and emerging risks;
- Measure resilience to stress events and scenarios;
- Monitor the impact of the potential stress events and scenarios on actual and projected capital and liquidity positions;
- Manage the potential stress events and scenarios by setting risk appetites and defining management actions; and
- Report, as required, to the ALCO, the BRC, the Board and the CBI.

C.7.1.1 Stress and scenario testing

At least annually, a broad range of Company risk specific stress and scenario tests are defined in consultation with key stakeholders to assess the impact of a range of potential events of differing levels of severity on the capital and liquidity positions of the Company. The stress and scenario tests performed by the Company, during 2025, included adverse economic conditions, change in reinsurance structures, catastrophic events, climate change, reserve deterioration, counterparty default and operational failings.

A range of assumptions are made in the development of potential events and the measurement of resilience to such events. These assumptions are defined by suitable experts and, where applicable, by regulators.

The outcome of the Company's 2025 SST serves to illustrate that the Company is resilient to a wide range of potential events and that the Company has a range of plausible management actions that could be executed in a timely manner, to mitigate the potential impacts from Company-specific or market-wide events.

C.7.1.2 Sensitivity analysis

Management use sensitivity analyses to assess a range of single factor standalone impacts of differing levels of severity on the capital and liquidity positions of the Company and to ensure that the Company has a sufficient range of plausible management actions that could be executed in a timely manner to mitigate the potential impacts.

The SCR is the primary basis used by the Company to measure and assess its risks. The sensitivity analysis performed by the Company includes consideration of the sensitivity of its SCR cover ratio, determined according to the SII Regulations, to a range of economic assumptions.

The table below shows the absolute change in cover ratio, for each sensitivity, e.g. a 3% positive impact would result in an increase in the cover ratio by 3%.

Sensitivity to assumptions as at 31 December 2025	Impact on cover ratio
Economic assumptions	
100bps increase in interest rates	4%
50bps decrease in interest rates	-3%
50bps increase in corporate bond spreads	-3%
50bps decrease in corporate bond spreads	3%
50bps increase in sovereign bond spreads	-2%
50bps decrease in sovereign bond spreads	2%
Non-economic assumptions	
5% increase in gross loss ratios	-7%

Limitations of the sensitivity analyses

The table above demonstrates the effect of a change in a key assumption while other assumptions remain unchanged whereas in reality, sensitivities are dynamic in nature as they will vary in quantum due to interactions with other risks and changes in values of those risks.

Other limitations in the sensitivity analyses include:

- The economic assumptions are hypothetical market movements selected to represent the Company's view of possible near-term market changes but which cannot be predicted with certainty;
- The sensitivities are non-linear, and larger or smaller impacts cannot be interpolated or extrapolated from the outcome; and
- The sensitivities assume that all interest and inflation rates move at the same rate at all durations.

C.7.2 Prudent Person Principle

The Company ensures that its assets are invested in accordance with the Prudent Person Principle as set out in Article 132 (Directive 2009/138/EC) through the collective application of its risk policies and business standards. These ensure that the Company invests in assets whose risks it can properly identify, measure, monitor, manage, control and report, and appropriately take into account in the assessment of its overall solvency needs having regard to the term and nature of its liabilities. The Company's Asset Liability Management Business

Standard and certain provisions of the Investment Management Business Standard contain mandatory requirements to ensure that the Company develops its own set of key risk indicators and takes into account the risks associated with its investments without relying only on the risk being adequately captured by the capital requirements. Risk appetites by risk type are also set and monitored by the Company. Other business standards set requirements for the quality of investment assets (including setting risk limits to control the market and credit risk within a portfolio), matching of assets to liabilities, diversification of invested assets and use of derivatives.

Aviva Insurance Ireland Designated Activity Company

Solvency and Financial Condition Report

2025

D. Valuation for Solvency Purposes

In this Chapter

D.1	Assets	31
D.2	Technical Provisions	33
D.3	Other Liabilities	37
D.4	Alternative Methods of Valuation	38
D.5	Any Other Information	38

D. Valuation for Solvency Purposes

The 'Valuation for Solvency Purposes' section of the report provides a description of the bases, methods and main assumptions used in the valuation of assets, technical provisions and other liabilities for each material asset and liability class.

The Company's IFRS balance sheet is presented in column (b) of the following table, in accordance with the classification of assets and liabilities used in its financial statements. The captions used in the table are from the balance sheet QRT S.02.01, rather than the financial statements. The references given in column (a) are to relevant accounting policies and notes provided in the financial statements.

A number of reclassifications, required to align the Company's IFRS balance sheet as shown in its financial statements, to the classifications required for the prescribed format of the SII balance sheet QRT, are given in column (c). The most significant reclassifications are:

- Under the SII Regulations cash flows relating to premiums not overdue and policyholder tax are included within Technical Provisions. In the IFRS balance sheet these amounts are included within insurance and intermediaries receivables and other liabilities respectively. Cashflows relating to reinsurance payables and amounts due to Group companies under internal quota share arrangements are included with reinsurance recoverables under the SII Regulations, and within reinsurance contract assets and amounts due from Group companies respectively in the IFRS balance sheet.
- Amounts receivable from, and payable to, Group companies under IFRS, are reclassified within the SII balance sheet to the relevant underlying nature of the balance.
- Investments, including cash equivalents, are reclassified under SII. They also include accrued investment income which is classified within prepayments and accrued income under IFRS.

The Company's assets and liabilities, as valued under IFRS and reclassified in line with SII Regulations, are shown in column (d). The Company's SII balance sheet is summarised in column (e) and detailed in the balance sheet QRT S.02.01 included in Appendix F.1.1. Differences between the valuation of the Company's assets and liabilities under SII and IFRS are presented in column (f).

Where the valuation of assets and liabilities is the same under IFRS and SII, a description of the bases, methods and main assumptions can be found in the accounting policies and notes of the Company's financial statements. If the valuation is materially different, a description of the bases, methods and main assumptions used under SII is given in Sections D.1, D.2 and D.3 below. Where alternative methods of valuation have been used these are detailed in Section D.4.

Assets and other liabilities have been valued, according to the requirements of the SII Regulations, at the amount for which they could be exchanged between knowledgeable willing parties in an arm's length transaction. The value of other liabilities is not adjusted to take account of the impact of changes in the own credit standing of the Company.

The Company applied the following hierarchy of valuation approaches:

1. Quoted market prices in active markets for the same assets or liabilities;
2. Quoted market prices in active markets for similar assets and liabilities (with adjustments to reflect differences where necessary);
3. Alternative methods of valuation.

The Company considers markets to be active where transactions take place with sufficient frequency and volume for pricing information to be available on an ongoing basis. Where the Company has concluded that markets are not active, alternative methods for valuation are used. The assets classified as Level 1 and Level 2 under IFRS 13, are deemed as market consistent under SII. The assets classified as Level 3, for which there is no active market, are considered to use alternative valuation methods under SII.

Balance Sheet – IFRS and SII

Accounting Policy D – ‘Fair value measurement’ and Note 13 – ‘Fair value methodology’ in the Company’s financial statements, provide additional information on the fair value of property (other than for own use), financial investments and receivables.

D.1 Assets

Assets have been valued according to the requirements of the SII Directive and related guidance; the basis of the SII valuation principle is the amount for which they could be exchanged between knowledgeable willing parties in an arm's length transaction. A description of the basis of valuation under SII along with valuation differences between the SII bases and the IFRS financial statements, by asset class, is provided below; if the valuation method has been described in the financial statements or is an alternative method of valuation detailed in Section D.4, it has not been included in this section.

D.1.1 Goodwill and other intangibles

Goodwill and intangible assets are valued at €nil under SII.

The goodwill recognised in the IFRS balance sheet represents the excess of the cost of an acquisition over the fair value of the share of the net assets of the acquired business at the date of acquisition by the parent company. This was subsequently transferred to the Company in 2019.

D.1.2 Deferred tax assets and liabilities

Deferred tax is determined on a non-discounted basis in accordance with International Accounting Standard IAS 12, principles on temporary differences between the economic value of assets or liabilities on the SII balance sheet and their tax base.

Assets are recognised to the extent that it is probable that future taxable profits will be available against which they can be utilised. Future taxable profits include taxable liabilities and profits arising from new business. The release of the Risk Margin is not considered to be a source of future profits. Assets are recognised separately to the extent they cannot be offset against corresponding deferred tax liabilities.

D.1.3 Property, plant and equipment (own use)

Under IFRS 16, lessees are required to recognise lease assets and liabilities on the statement of financial position for all leases, with the exception of short-term and low-value leases. Where the Company is the lessee, a lease liability equal to the present value of outstanding lease payments and a corresponding right-of-use asset equal to cost are initially recognised. The right-of-use asset is subsequently measured at amortised cost and depreciated on a straight-line basis over the length of the lease term. Depreciation on lease assets and interest on lease liabilities is recognised in the income statement.

Under SII, the leased asset is held at fair value which is deemed to be equal to the related lease liability for unimpaired assets and equal to the IFRS asset value for impaired assets.

D.1.4 Participations

A participation is a Solvency II term for a holding, direct or by way of control, of 20% or more of the voting rights of an undertaking. It can therefore be a subsidiary, an associate or a joint venture.

Under SII participations are valued, using the adjusted equity method, at the Company's share of the excess of assets over liabilities, valued on a look through basis to the SII value of the assets and liabilities of the entity. Further detail is provided in section D.4.

Under IFRS, subsidiaries are stated at cost less impairment.

D.1.5 Financial investments

Financial investments, primarily consisting of debt securities, are measured at fair value for both SII and IFRS purposes. Fair value is obtained from quoted market prices or, if these are not available, by using relevant valuation techniques.

Bonds and exchange traded derivatives in the IFRS financial statements are fair valued using quoted market prices. This methodology is consistent with SII.

Collective investment undertakings are carried at fair value using quoted unit prices which is consistent with SII. The SII valuation of deposits other than cash equivalents is in line with the IFRS treatment.

D.1.6 Reinsurance recoverables

Reinsurance recoverables are calculated as the probability-weighted average of discounted future cash flows relating to reinsurance contracts, adjusted for the expected losses due to counterparty default. Although established separately, reinsurance recoverables are valued on the same basis and using the same methodology and assumptions used to derive Technical Provisions - Best Estimate Liabilities, as described in Section D.2, subject to the following:

- Internal expenses are only allowed if they are recoverable under the reinsurance agreement;
- Where the timing of recoveries diverges from that for payments a separate projection is used;
- Allowance for risk of default depends on the credit rating and exposure to the reinsurance counterparty; and
- Reinsurance assets take into account reinsurance commissions.

Reinsurance recoverables, consistent with the calculation of Technical Provisions - Best Estimate Liabilities, includes expected recoveries from pre-inception contracts where they occur within the premium provisions.

Cash flows relating to future reinsurance arrangements comprise both expected recoveries and expected reinsurance premium payments. This means reinsurance contracts which are expected to be written are taken into account and thus assumptions in relation to the likely future reinsurance purchasing decisions are required.

The material differences between the SII and IFRS valuation bases for reinsurance recoveries are as follows:

- The Asset for Remaining Coverage (ARC) established under IFRS is replaced with a best estimate reinsurance premium provision in Solvency II;
- The Solvency II valuation includes provision for the reinsurance premium that is expected to be paid for reinsurance on gross business incepted at the valuation date. This is not included in IFRS;
- There is also a small difference in the allowance for counterparty default risk between the two bases;
- Insurance receivables which are not past due under IFRS are treated as future cash flows and reclassified to technical provisions under Solvency II. Under Solvency II, the value of receivables is based on the discounted cash flows arising from the receivable adjusted for the risk of default; and
- Under IFRS 17, amounts due from its parent company (AIL) under the internal quota share arrangement are reflected within the ARC, but under Solvency II these amounts are reclassified to receivables.

The Company does not have any Special Purpose Vehicles.

D.1.7 - Receivables (insurance, reinsurance and intermediaries)

Under IFRS, insurance receivables which are not past due are treated as future cash flows and reclassified to technical provisions under Solvency II. Under Solvency II, the value of receivables is based on the discounted cash flows arising from the receivable adjusted for the risk of default.

D.1.8 Assets arising from leasing arrangements

The Company's property leases are detailed in section A.4.2. The asset arising from these leases is detailed in section D.1.4.

D.1.9 Changes made to recognition and valuation bases and estimations during the reporting period

No material changes were made to the bases used to recognise and value assets, or to their estimations, during the reporting period.

D.2 Technical Provisions

This section provides a definition of SII Technical Provisions, the methodology and main assumptions used in the valuation of the SII Technical Provisions, the total value of SII Technical Provisions split by material lines of business, a comparison of the valuation of SII Technical Provisions with IFRS Technical Provisions and a description of the level of uncertainty in Technical Provisions.

D.2.1 Valuation of Technical Provisions

Technical provisions which comprise Best Estimate Liabilities and a Risk Margin are summarised in the table below. They are also detailed in the QRT S.17.01 (Non-life Technical Provisions) see Appendix F.1.3.2.

As at 31 December 2025 €m	Best Estimate Liabilities	Risk Margin	Technical Provisions
Motor vehicle liability	514	8	522
Other motor insurance	31	1	32
Fire and property damage	245	8	253
General liability insurance	547	9	556
Other lines of business	9	—	9
Total Non-life (excluding health)	1,346	26	1,372
Health (similar to non-life) insurance obligations	—	—	—
Total	1,346	26	1,372

Reinsurance recoverables amount to €1,097m. These are calculated on a basis consistent with the Technical Provisions – Best Estimate Liabilities and include expected recoveries from pre-inception contracts where these fall within the premium provisions. After allowing for reinsurance recoverables, the net technical provisions are €275m. Further detail is provided in QRT S.17.01 (Non-life Technical Provisions) see Appendix F.1.3.2.

D.2.1.1 Non-life and health (similar to non-life) Best Estimate Liabilities

The following general principles apply to the valuation of Best Estimate Liabilities for non-life and health (similar to non-life) business:

- A Best Estimate is one that represents the expected result from the range of possible outcomes for the future;
- A consistent approach has been applied across all non-life and health (similar to non-life) business; and
- The calculation of Technical Provisions is performed on a going concern basis. This means that it can be assumed that contracts run to their conclusion and the management costs of servicing the run-off of all claims in respect of this is included as part of the technical provisions.

The Company's Best Estimate Liabilities are valued based on probability weighted future cash flows discounted using relevant risk-free interest rates. The cash flows that are considered when calculating the Best Estimate Liabilities derive from:

- In-force and expired contracts; and
- Contracts that have not yet incepted but that the Company has an obligation to enter into at the valuation date (pre-inception contracts).

Best Estimate Liabilities comprise a claims provision and a premium provision. The claims provision includes cash flows relating to events that occurred before the valuation date, whether reported or not. The cash flows include unreceived premiums, net claims costs and expenses. The premium provision includes cash flows relating to future claim events that have not yet occurred, but that are covered by existing contracts and legally binding pre-inception contracts. The cash flows include premiums, net claims and expenses, in respect of future claim events. Where future premium cash flows are expected to exceed projected future claim and expense cash flows, the premium provision is negative.

When modelling these cash flows the inflows are considered separately from the outflows. Claims costs take into account recoveries from salvage and subrogation and the full management cost of servicing the provisions.

Claims costs

The ultimate cost of outstanding claims is estimated using a range of standard actuarial claims projection techniques. The main assumption underlying these techniques is that the Company's past claims experience can be used as a basis to project future claims. Therefore, these methods extrapolate the development of paid and incurred losses, average costs per claim and claim numbers based on the observed development of earlier years. The estimation of ultimate claims costs is done at the level of homogeneous risk groups. These groups are mapped to SII lines of business.

Certain lines of business are also further analysed by claim type or type of coverage. For example, latent claims require specialist techniques appropriate for the nature of the underlying liabilities. Given the long delay between writing the insurance policy and the claim arising, the techniques used for latent claims typically group claims data by the year claims are reported and project the future number and average cost of claims for homogeneous latent claim types based on a combination of own Company experience and industry-wide data.

Qualitative judgement is used to reflect changes in external factors such as public attitudes to claiming, economic conditions, levels of claims inflation, judicial decisions and legislation, as well as internal factors such as portfolio mix, policy conditions and claims handling procedures.

Premium provisions

Premium provisions are estimated by selecting an exposure measure and using that to establish the unearned and pre-inception exposure. Claims cost projections are set for each future period using trends in historic claims data adjusted for known anomalies in the data that are

not expected to be repeated in the future, changes in mix and volume of business and to allow for the impact of projected claims inflation. These cost projections are then applied to the predicted exposure to determine the cash flows.

Expenses

Expenses are adjusted for expense and claims inflation and allocated between the claims and premium provisions. They are analysed by homogeneous risk group or at a minimum by SII line of business. Future administrative costs and commission payments (in respect of unaccepted business) are projected using best estimate expense forecasts. Investment expenses are modelled as a percentage of Technical Provisions. Future unallocated loss adjustment expense provisions are set in relation to expected claims levels.

Events Not in Data (ENID)

ENID are events not deemed to be captured by the data which need to be separately allowed for within the best estimate calculations to take appropriate account of uncertainty.

Allowances are made using scenario analysis to cover any foreseeable event with a potentially material impact. A core list of events is specified which are considered as the starting point for the analysis. ENID are considered both at SII lines of business level, and at portfolio level with allocations to SII lines of business, depending on the scenario being considered.

Discounting

All cash flows are discounted using the appropriate SII yield curve in the relevant currency. The yield curve is based on the risk free rate at the valuation date. Payments are assumed to occur either mid-month or mid-year. Cash flows are modelled in monthly time intervals for the first 10 years and annually thereafter.

Future management actions

There are no future management actions assumed in the calculation of the Company's gross of reinsurance Best Estimate Liabilities as at 31 December 2025.

D.2.1.2 Risk Margin

The Risk Margin is an estimate of the amount, in addition to the Best Estimate Liability, that a third party would expect to receive in order to assume ownership of the Company's insurance obligations. The Risk Margin is calculated using a cost of capital approach. The calculation of the Risk Margin is defined as the present value of the cost of capital applied to the SCR in respect of non-hedgeable risks in each future year.

The cost of capital rate is the cost in excess of the risk-free rate, to the third party taking over the liabilities, of raising and holding capital to support the non-hedgeable risks over the lifetime of the business. The same cost of capital rate is used for all insurance companies and is prescribed by EIOPA at 6% per annum.

Discount rate

The rate used to discount the projected non-hedgeable SCR is the basic risk-free rate (including credit risk adjustment), with no allowance for volatility or matching adjustments, where applicable.

Non-hedgeable risk

The SCR in the Risk Margin calculation takes the following risks into account:

- Underwriting risks (non-life);
- Counterparty default risk with respect to reinsurance contracts; and
- Operational risk.

Note that all market risks in respect of investment assets are considered hedgeable.

While reinsurance credit risk, and some underwriting risks, may be hedgeable in practice, using credit default swaps etc., the risk margin calculation assumes that these risks are not hedged after the business is transferred to the third party.

Projection of the non-hedgeable risk SCR

The non-hedgeable SCR which underpins the Risk Margin is projected in line with the technical provision cashflows as a percentage of those technical provisions but reflecting the reduced diversification in the SCR in the future.

Loss absorbing capacity

There is no allowance for Loss Absorbing Capacity of Deferred Taxes or Loss Absorbing Capacity of Technical Provisions in the SCR or Risk Margin.

Allocation of the Risk Margin to SII line of business

The Risk Margin is allocated across lines of business based on the time zero non-hedgeable SCR.

D.2.1.3 Simplifications

Best Estimate Liabilities

In some areas of the calculation of the SII Best Estimate Liabilities, simplified methods have been used. The simplifications used have been assessed and have no material impact on the value of SII Best Estimate Liabilities. Where simplified methods are used, these are

documented and justified in the Company's reserving reports and documentation. The main simplifications within the calculation of SII Best Estimate Liabilities are:

- The majority of the Company's Best Estimate Liabilities are in Euro. As part of the calculation of Technical Provisions, the Company segments any material exposure to Sterling (GBP) and Euro (EUR) currencies. On materiality grounds, exposure to currencies outside of GBP and EUR are not separately segmented and are instead converted to Euro at prevailing exchange rates;
- The Company's Best Estimate Liabilities include a provision in relation to ENID. For the purposes of discounting cashflows, it is assumed that ENID have the same cashflow profile as other claims;
- When calculating provisions for potential reinsurer default, reinsurance assets are grouped by reinsurer counterparty credit rating and within each credit rating the same probabilities of default are assumed;
- Gross premium debtors are split by class of business and payment date based on the split of written premium; and
- The volume of Legally Obligated Unaccepted Business has been estimated based on a proportion of January's planned written premium for most classes of business. For corporate and speciality type business, the volume has been estimated individually for each class in conjunction with the Group's underwriting teams to allow for business accepted under long-term agreements.

D.2.2 Level of uncertainty

In conducting its insurance business, the Company receives general insurance property damage and liability claims and may become involved in actual or threatened litigation arising from these claims. The actual cost of settling insurance obligations may differ from the best estimate liabilities because experience may be better or worse than assumed or future claims inflation may differ from that expected. There are a number of potential developments that would have a material adverse impact on the best estimate liabilities value including:

- Catastrophic weather events;
- New types of latent claims. Given the significant delays that are experienced in the notification of these claims, the potential number of incidents which they cover, and the uncertainties associated with establishing liability, the ultimate cost cannot be determined with certainty. Gross of reinsurance the level of uncertainty within the technical provisions for latent claims is high. The Company has extensive reinsurance in place against these claims so net of reinsurance the level of uncertainty is reduced;
- Unanticipated legislative changes; and
- Unanticipated inflation.

Developments that could have a material impact on the best estimate liabilities value include:

- Personal injury reform, which may alter judicial award levels, settlement behaviour and claims development patterns;
- A changing profile of business being written by the Company;
- Further disruption to global supply chains caused by political instability which brings a return of the heightened levels of motor and property damage inflation seen in the years 2021-2023; and
- For large injury claims, the potential for a change in the discount rate used to set lump sum awards as well as the increased risk of Periodic Payment Orders (PPOs) within Ireland.

D.2.3 Material differences between the SII and IFRS valuation bases

The following table summarises gross of reinsurance SII Technical Provisions by material line of business and compares these to IFRS reclassified Technical Provisions. The information contained in this table is an extract from the SII Balance Sheet QRT S.02.01, presented in Appendix F.1.1.

Technical Provisions as at 31 December 2025 €m	Best Estimate Liabilities	Risk Margin	Technical Provisions	IFRS reclassified Technical Provisions	Difference between SII and IFRS reclassified Technical Provisions
Non-life insurance obligations	1,346	26	1,372	1,419	(47)
– Motor vehicle liability	514	8	522	541	(19)
– Other motor insurance	31	1	32	40	(8)
– Fire and property damage	245	8	253	268	(15)
– General liability insurance	547	9	556	566	(10)
– Other	9	—	9	5	4
Health (similar to non-life) insurance obligations	—	—	—	11	(11)
Total	1,346	26	1,372	1,430	(58)

On materiality grounds the Other Non-life row of this table groups together a number of the smaller non-life lines of business.

The material differences between the SII and IFRS valuation bases are summarised below:

- SII Technical Provisions include the Risk Margin, which is not included within IFRS Provisions, and which increases SII Technical Provisions compared to IFRS Provisions. This impacts on all lines of business, but has the greatest impact on the Motor Vehicle Liability and General Liability insurance lines of business;
- A Risk Adjustment is included within IFRS Provisions but removed under SII. This impacts all lines of business and reduces SII Technical Provisions compared to IFRS Provisions;
- Discount rates used in Solvency II vary from those used in IFRS and all lines of business are affected by these differences. Solvency II best estimate liabilities are valued as set out in section D.2.1.1. Whereas IFRS liabilities are valued using a risk-free rate plus an illiquidity premium that reflects the liquidity characteristics of the liabilities;
- The liability for remaining coverage and loss component established under IFRS for all Non-life lines of business is replaced with a Best Estimate premium provision which incorporates the expected cost of claims and expenses on the unearned periods of exposure. This

typically leads to a lower premium provision under SII than the equivalent liability for remaining coverage under IFRS. This difference impacts all non-life lines of business; and

- Under SII, provisions are established for Legally Obligated Unaccepted Business, whereas these provisions are not included within the IFRS valuation basis unless contracts are identified as being onerous. This difference impacts all Non-life lines of business. This will reduce SII Technical Provisions compared to IFRS Provisions.

D.2.4 Other reliefs

No transitional provisions have been applied in the calculation of SII Technical Provisions. The Company does not use volatility or matching adjustments.

D.3 Other Liabilities

Other liabilities have been valued according to the requirements of the SII Directive and related guidance; the basis of the SII valuation principle is the amount for which they could be exchanged between knowledgeable willing parties in an arm's length transaction. A description of the basis of valuation under SII along with valuation differences between the SII bases and the IFRS financial statements, by material class, is provided below; if the valuation method has been described in the financial statements or is an alternative method of valuation detailed in Section D.4, it has not been included in this section.

The Company's financial statements provide information about contingent liabilities and other risk factors in note 26. The Company has no additional material contingent liabilities to recognise under SII.

D.3.1 Payables and other financial liabilities

Payables and other financial liabilities are recognised initially at their fair value and are subsequently measured at amortised cost using the effective interest rate method, under IFRS. There are no material differences between the IFRS value and fair value under SII.

D.3.2 Assumptions, judgements and uncertainty

No material assumptions or judgements were applied to, nor is any material uncertainty associated with, the recognition and valuation of other liabilities.

D.3.3 Changes made to recognition and valuation bases and estimations during the reporting period

No material changes were made to the bases used to recognise and value other liabilities, or to their estimations, during the reporting period.

D.4 Alternative Methods of Valuation

The majority of the Company's assets and other liabilities are valued using quoted market information or observable market data. Maximum use has been made of market observable inputs when alternative methods of valuation have been adopted. The material assets and other liabilities, disclosed in the Balance Sheet QRT in Appendix F.1.1, that have alternative methods of valuation methods applied are as follows:

Participations

Participations of €4m (2024: €4m) are valued at the Company's proportionate equity share of the excess of assets over liabilities, valued on a look through basis to the SII value of the assets and liabilities of the entity. This method is used because quoted prices from active markets in the equity of the subsidiaries are not available.

Property (own use)

Property held for own use includes leased assets that are measured at amortised cost and depreciated on a straight-line basis over the length of the lease term. Under SII, the leased asset is held at fair value, which is deemed to be equal to the related lease liability for unimpaired assets and equal to the IFRS value for impaired assets. The lease liability is equal to the minimum lease payments, consisting of future expected cashflows discounted using the interest rate implicit in the lease. This approach means that the uncertainty relating to the valuation of property (other than own use) net of lease liabilities is immaterial.

Derivatives

Derivative assets and liabilities, with SII values of €9m (2024: €10m) and €8m (2024: €15m) respectively, are stated at fair value under IFRS and SII but include accrued income under SII. This is classified separately under IFRS. The majority of derivatives are over-the-counter derivatives and are valued by the broker based on an income approach using either discounted cash flow models or option pricing models and applying market observable inputs. The valuations are validated against counterparty statements. The absolute valuation uncertainty associated with derivatives is immaterial.

Adequacy of valuation compared to experience

The Company operates independent price verification (IPV) controls across all assets. For asset types where a secondary source is available (such as over-the-counter derivatives), this involves comparing the primary valuation to a secondary independent source, investigating material differences and making a valuation adjustment where appropriate.

D.5 Any Other Information

The Company has no other material information to disclose.

Aviva Insurance Ireland Designated Activity Company

Solvency and Financial Condition Report

2025

E. Capital Management

In this Chapter

E.1	Own Funds	40
E.2	Solvency Capital Requirement and Minimum Capital Requirement	42
E.3	Use of the duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement	42
E.4	Differences between the Standard Formula and any Internal Model used	42
E.5	Non-Compliance with the Minimum Capital Requirement and Non-Compliance with the Solvency Capital Requirement	42
E.6	Any Other Information	42

E. Capital Management

The 'Capital Management' section of the report describes the objectives, policies and procedures employed by the Company for managing its Own Funds. The section also covers information on structure and quality of Own Funds and calculation of SCR.

E.1 Own Funds

E.1.1 Management of Own Funds

The Company's own funds and risk management objectives are closely interlinked and support earnings growth and dividend policy, whilst also recognising the critical importance of protecting policyholder and other stakeholder interests. The Company's primary objective of managing capital efficiently is to optimise the balance between return and risk, whilst maintaining economic and regulatory capital surplus in accordance with approved risk appetites.

In managing its Own Funds the Company also seeks to:

- Match the profile of its assets and liabilities, taking account of the risks inherent in the business;
- Maintain sufficient, but not excessive, financial strength to support new business growth and satisfy the requirements of its policyholders and its regulator, the CBI;
- Retain financial flexibility by maintaining sufficient liquidity; and
- Allocate capital efficiently, applying it to support value-adding growth and repatriating excess capital to its shareholder through dividends.

There have been no material changes in the objectives or policies employed for managing Own Funds during the year.

Own Funds are monitored via forecasts over a three year planning horizon. SST are used to enable the Company to understand the volatility of its earnings and capital requirement, and therefore manage its capital more efficiently.

E.1.2 Eligible Own Funds

An analysis of the Company's Own Funds by tier is presented in the Own Funds QRT S.23.01.01, (see Appendix F.1.6), and summarised below.

Own Funds €m	Tier 1				Total 2024	Tier 1 (unrestricted) 2024	Tier 2 2024	Tier 3 2024
	Total 2025	(unrestricted) 2025	Tier 2 2025	Tier 3 2025				
As at 31 December								
Ordinary share capital	136	136	—	—	136	136	—	—
Reconciliation reserve	(73)	(73)	—	—	(78)	(78)	—	—
Capital contribution reserve	188	188	—	—	188	188	—	—
Total Basic Own Funds	251	251	—	—	246	246	—	—

Tiering analysis

The Company's ordinary share capital, capital contribution reserve and reconciliation reserve are all available to absorb losses and have the Tier 1 features of permanence and subordination. As the Company's Articles of Association do not contain any restriction on the right of the Company to cancel dividends or other distributions at any time before they are paid, the Company's ordinary share capital is classified as unrestricted Tier 1.

Significant changes in Own Funds during the year

Own Funds of €251m (2024: €246m) increased by €5m during the year. The increase was mainly driven by profit generated from the Company's operations.

No other significant changes in Own Funds have occurred in the year.

Reconciliation reserve

The Company's capital comprises ordinary share capital, capital reserves and retained earnings. Capital reserves and retained earnings are not separately disclosed in Own Funds. They are notionally included in the reconciliation reserve, which reconciles the total excess of assets over liabilities with identifiable capital instruments included in Own Funds.

The table below sets out the constituent parts of the reconciliation reserve:

As at 31 December	€m	
	2025	2024
SII excess of assets over liabilities	251	246
Ordinary share capital	(136)	(136)
Capital contribution reserve	(188)	(188)
Reconciliation reserve	(73)	(78)

Eligibility of tiered capital

The eligibility of tiered capital, to cover the SCR and MCR depends upon the tiering shown above and a number of quantitative limits. The Company's Own Funds satisfy all limits applicable to the SCR and therefore the eligibility of the Company's capital to cover the SCR is unrestricted.

At least 80% of the MCR must be covered by Tier 1 capital and Tier 3 capital is not eligible to cover the MCR at all. Eligible funds to meet the MCR are also unrestricted, as shown in the table below.

	€m	€m
As at 31 December	2025	2024
Total eligible Own Funds to meet the SCR	251	246
Total eligible Own Funds to meet the MCR	251	246

The ratio of eligible Own Funds to the SCR and the MCR is detailed below.

As at 31 December	2025	2024
Ratio of eligible Own Funds to the SCR	162 %	162 %
Ratio of eligible Own Funds to the MCR	605 %	582 %

E.1.3 Material differences between equity on an IFRS basis and Own Funds

The Company's Own Funds are equal to the excess of assets over liabilities on a SII basis as set out in the following table.

	€m	€m
As at 31 December	2025	2024
Excess of assets over liabilities on a SII basis	251	246
Own Funds	251	246

The Company's excess of assets over liabilities on a SII basis was €126m (2024: €115m) less than its total equity on an IFRS basis. The following table details the material differences between the excess of assets over liabilities on a SII basis and total equity on an IFRS basis.

As at 31 December 2025	€m	€m	See Section
Total equity on an IFRS basis		377	
Elimination of goodwill and intangibles	(116)		D.1.1
Valuation adjustments to property	3		D.1.3
Valuation adjustments to participations	(16)		D.1.4
Valuation adjustments to reinsurance recoverables	(54)		D.1.6
Valuation adjustments to Technical Provisions	58		D.2.3
Valuation adjustments to other liabilities	—		D.3.2
Net deferred tax adjustments	(1)		D.1.2
		(126)	
Excess of assets over liabilities on a SII basis		251	

E.1.4 Transitional arrangements and restrictions

The Company's Own Funds are unrestricted and fully transferable.

E.2 Solvency Capital Requirement and Minimum Capital Requirement

E.2.1 The amount of the SCR and MCR

The Company's SCR as at 31 December 2025 was €155m (2024: €152m). This is shown in the SCR QRT, S.25.01, see Appendix F.1.7.

The Company's MCR as at 31 December 2025 was €41m (2024: €42m). This is shown on the MCR QRT, S.28.01, see Appendix F.1.8.

The final amount of the SCR is subject to supervisory assessment and does not include any regulator-imposed capital add-ons.

E.2.2 The composition of the SCR

The Company determines its SCR using a SF approach. Material risk modules are shown below. Further detail is shown in the SCR QRT S.25.01, see Appendix F.1.6.

Diversified SCR by material risk category (per the SCR QRT)	€m	€m
As at 31 December	2025	2024
Market risk	11	10
Non-life underwriting risk	100	100
Operational risk	36	35
Counterparty risk	26	24
Other	3	1
Diversification between risk categories	(20)	(18)
Total SCR	155	152

Each risk module includes the impact of diversification within that module. The diversification benefit presented in the table above of €20m therefore only includes the benefit of diversification between risk modules.

Non-life underwriting risk remains the largest component of the SCR, mainly driven by premium and reserve risk. Counterparty risk also contributes significantly to the SCR, reflecting external reinsurance and the quota share reinsurance arrangement with the parent company. The other material component of the SCR is Operational risk, which is based on 30% of the Basic SCR as defined under SF regulations. The risk represented in Other is Health underwriting risk. This is attributable to the joint venture entered into through which the Company began writing Health Insurance in 2024.

E.2.3 Simplifications, undertaking specific parameters and matching adjustment

The Company has not used any simplified calculations, undertaking specific parameters or a matching adjustment in the calculation of its SCR.

E.2.4 MCR calculation

The Company's MCR is calculated by applying prescribed factors to its written premium and its net Best Estimate Liabilities. The MCR is subject to two further constraints: it must lie in the range of 25% to 45% of the Company's SCR; and it cannot be less than an absolute minimum of €4.0m. The Company's MCR currently lies within this range.

E.3 Use of the duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement

The Company does not use the duration-based equity risk sub-module in the calculation of the Company's SCR.

E.4 Differences between the Standard Formula and any Internal Model used

The company uses the standard formula to calculate its SCR.

E.5 Non-Compliance with the Minimum Capital Requirement and Non-Compliance with the Solvency Capital Requirement

The Company has complied continuously with both the MCR and the SCR throughout the reporting period.

E.6 Any Other Information

E.6.1 Any Other Information

The Company has no other material information to disclose.

F.0 Cautionary Statement

This document contains, and we may make other verbal or written ‘forward-looking statements’ with respect to certain of the Company’s plans and current goals and expectations relating to future financial condition, performance, results, strategic initiatives, objectives and other future events and circumstances (including, climate and other sustainability related plans and goals). Statements including those containing the words ‘believes’, ‘intends’, ‘expects’, ‘projects’, ‘plans’, ‘will’, ‘seeks’, ‘aims’, ‘may’, ‘might’, ‘could’, ‘should’, ‘outlook’, ‘likely’, ‘target’, ‘goal’, ‘guidance’, ‘trends’, ‘future’, ‘estimates’, ‘potential’, ‘possible’, ‘objective’, ‘predicts’, ‘ambition’ and ‘anticipates’, and words of similar meaning, are forward-looking. By their nature, all forward-looking statements are subject to known and unknown risks and uncertainty. Accordingly, there are or will be important factors that could cause actual results to differ materially from those indicated in these statements.

The Company believes factors that could cause actual results to differ materially from those indicated in forward-looking statements in the report include the impact of ongoing uncertain conditions in the global financial markets and the national and international political and economic situation generally (including those arising from the current and emerging geopolitical landscape and rising protectionist measures); market developments and government actions; the effect of credit spread volatility on the net unrealised value of the investment portfolio; the effect of losses due to defaults by counterparties, including potential sovereign debt defaults or restructurings, on the value of investments; the impact of changes in short or long-term interest rates and inflation reduce the value or yield of the investment portfolio and impact asset and liability matching; the impact of changes in equity or property prices on the investment portfolio; fluctuations in currency exchange rates; the effect of market fluctuations on the value of the assets backing their reserves; the amount of allowances and impairments taken on investments; the effect of adverse capital and credit market conditions on the Company’s ability to meet liquidity needs and access to capital; changes in, or restrictions on, the ability to commence capital management initiatives; changes in or inaccuracy of assumptions in pricing and reserving for insurance business (particularly with regard to mortality and morbidity trends, lapse rates and policy renewal rates), a cyclical downturn of the insurance industry; the impact of natural and man-made catastrophic events (including pandemics) on business activities and results of operations; the transitional, litigation and physical risks associated with climate change; failure to understand and respond effectively to the risks associated with sustainability; the Company’s reliance on information and technology and third-party service providers for operations and systems; technological developments; the impact of the Company’s risk mitigation strategies proving less effective than anticipated, including the inability of reinsurers to meet obligations or unavailability of reinsurance coverage; increased competition in Ireland, the UK and in other countries where the Company have significant operations; the impact of recognising an impairment of goodwill or intangibles with indefinite lives; changes in valuation methodologies, estimates and assumptions used in the valuation of investment securities; the effect of legal proceedings and regulatory investigations; the impact of operational risks, including inadequate or failed internal and external processes, systems and human error or from external events and malicious acts (including cyber attack and theft, loss or misuse of customer data); risks associated with arrangements with third parties, including joint ventures; reliance on third-party distribution channels to deliver products; the failure to attract or retain the necessary key personnel; the effect of a decline in any rating by rating agencies on the Company’s standing among customers, broker-dealers, agents, wholesalers and other distributors of products and services; changes to the brand and reputation and the potential loss of or damage to customer relationships, whether related to changes in customer habits or not; changes in laws and legal or public policy, in particular; changes in tax laws and interpretation of existing tax laws in jurisdictions where we conduct business; changes to International Financial Reporting Standards relevant to insurance companies and their interpretation; the inability to protect our intellectual property; the policies, decisions and actions of government or regulatory authorities in Ireland, the UK, the EU, the US or elsewhere, including changes to and the implementation of key legislation and regulation. For a more detailed description of these risks, uncertainties and other factors, please see the Aviva plc Annual report and accounts.

The Company undertakes no obligation to update the forward-looking statements in this report or any other forward-looking statements it may make. Forward-looking statements in this report are current only as of the date on which such statements are made and readers are cautioned not to place undue reliance on such forward-looking statements. Such statements should be regarded as indicative and illustrative only, and the Company does not provide any representation, assurance or guarantee that the occurrence of the events expressed or implied in any forward-looking statements in this presentation will actually occur.

This Solvency and Financial Condition Report has been published for information only, it is based on the Company’s understanding as at 2 April 2026 and does not provide financial or legal advice. The Company, its directors, employees, agents or advisers do not accept or assume responsibility to any person to who this document is shown or into whose hands it may come, and any such responsibility or liability is expressly disclaimed.
