

VUEgroup

Vehicle telematics, vehicle safety technology, fleet analytics, and secure file sharing

VUE provides CCTV and software insight tools to fleets of all shapes and sizes. As industry leaders in AI technology, their camera systems can detect potential risks in and around a vehicle, helping drivers to manoeuvre with more awareness.

Alerts can be sent in-cab and to fleet managers to review via their online platform VUEhub, a centralised place for all fleet management tools. The solution is also home to a secure media exchange service which enables claims to be resolved promptly. Their innovative technology helps to reduce accident rates, improve driver behaviour, and ultimately minimise the risk fleet drivers pose to others on the road.

Services

- Integrated cameras and telematics
- Internal and external cameras
- Device agnostic
- AI technology
- Multimedia sharing platform
- Analytics data in a mobile friendly app
- Live tracking software and more

Benefits

- Supports eliminating driver blind spots
- Aims to protect vulnerable road users
- Aims to protect drivers
- Proactively monitors driver to support wellbeing
- Can help to improve fleet driver standards
- Aims to reduce the overall cost of claims and streamlines the process
- Aims to improve the efficiency of a fleet
- Compliance with Direct Vision Standards (DVS), Freight Operator Recognition Scheme (FORS) and Construction Logistics and Community Safety (CLOCS)
